## PREFACE

In this book authors for the first time introduce the notion of non associative vector spaces and non associative linear algebras over a field. We construct non associative space using loops and groupoids over fields.

In general in all situations, which we come across to find solutions may not be associative; in such cases we can without any difficulty adopt these non associative vector spaces/linear algebras. Thus this research is a significant one.

This book has six chapters. First chapter is introductory in nature. The new concept of non associative semilinear algebras is introduced in chapter two. This structure is built using groupoids over semifields. Third chapter introduces the notion of non associative linear algebras. These algebraic structures are built using the new class of loops. All these non associative linear algebras are defined over the prime characteristic field $\mathrm{Z}_{\mathrm{p}}$, p a prime. However if we take polynomial non associative, linear algebras over $Z_{p}, p$ a prime; they are of infinite dimension over $\mathrm{Z}_{\mathrm{p}}$.

We in chapter four introduce the notion of groupoid vector spaces of finite and infinite order and their generalizations.

Only when this study becomes popular and familiar among researchers several applications will be found. The final chapter suggests around 215 problems some of which are at research level. We thank Dr. K.Kandasamy for proof reading and being extremely supportive.

## Chapter One

## Basic Concepts

In this chapter we just recall the notion of two basic structures viz; groupoids and loops. We have used $\mathrm{Z}_{\mathrm{n}}=\{0,1,2, \ldots, \mathrm{n}-1\}$ $=\left\{g_{0}, g_{1}, \ldots, g_{n-1}\right\}$ to be the ring of modulo integers. We define an operation * on $\mathrm{Z}_{\mathrm{n}}$ as follows; for $\mathrm{g}_{\mathrm{i}}, \mathrm{g}_{\mathrm{j}} \in \mathrm{Z}_{\mathrm{n}}$,

$$
g_{i} * g_{j}=\operatorname{tg}_{i}+u_{j}=g_{t i+u j(\bmod n)}
$$

where $\mathrm{t}, \mathrm{u} \in \mathrm{Z}_{\mathrm{n}}$.
$\left\{\mathrm{Z}_{\mathrm{n}},{ }^{*},(\mathrm{t}, \mathrm{u})\right\}$ is a groupoid of order n .
Depending on $\mathrm{t}, \mathrm{u} \in \mathrm{Z}_{\mathrm{n}}$ we can get different types of groupoids.

For more about these groupoids please refer [35].
Example 1.1: Let $G=\left\{Z_{10}, *,(7,3)\right\}$ be a groupoid of order 10. If $\mathrm{g}_{3}, \mathrm{~g}_{1} \in \mathrm{Z}_{10}$ then $\mathrm{g}_{3} * \mathrm{~g}_{1}=\mathrm{g}_{3.7+1.3(\bmod 10)}=\mathrm{g}_{4} \in \mathrm{Z}_{10}$.

It is easily verified $*$ on $\mathrm{Z}_{\mathrm{n}}$ is non associative and non commutative.

Example 1.2: Let $\mathrm{G}=\left\{\mathrm{Z}_{12}, *,(4,6)\right\}$ be a groupoid of order 12.

Example 1.3: Let $\mathrm{G}=\left\{\mathrm{Z}_{13}, *,(1,9)\right\}$ be a groupoid of order 13.

Example 1.4: Let $\mathrm{G}=\left\{\mathrm{Z}_{40},{ }^{*},(19,0)\right\}$ be a groupoid of order 40.

Now using these type of groupoids built using $Z_{n}$ we construct matrix groupoids, polynomials with groupoid coefficients and polynomials with matrix groupoids under the groupoid operation '*' on $\mathrm{Z}_{\mathrm{n}}$.

We will illustrate all these situations only by examples.

## Example 1.5: Let

$$
\mathrm{G}=\left\{\left(\mathrm{g}_{1}, \mathrm{~g}_{2}, \mathrm{~g}_{3}, \mathrm{~g}_{4}\right) \mid \mathrm{g}_{\mathrm{i}} \in \mathrm{Z}_{15}, *,(2,7) ; 1 \leq \mathrm{i} \leq 4\right\}
$$

be a row matrix groupoid. If $\mathrm{x}=\left(\mathrm{g}_{7}, \mathrm{~g}_{9}, \mathrm{~g}_{1}, \mathrm{~g}_{0}\right)$ and $\mathrm{y}=\left(\mathrm{g}_{3}, \mathrm{~g}_{2}\right.$, $\mathrm{g}_{4}, \mathrm{~g}_{6}$ ) are in g then

$$
\begin{aligned}
\mathrm{x} * \mathrm{y} & =\left(\mathrm{g}_{7}, \mathrm{~g}_{9}, \mathrm{~g}_{1}, \mathrm{~g}_{0}\right) *\left(\mathrm{~g}_{3}, \mathrm{~g}_{2}, \mathrm{~g}_{4}, \mathrm{~g}_{6}\right) \\
& =\left(\mathrm{g}_{7} * \mathrm{~g}_{3}, \mathrm{~g}_{9} * \mathrm{~g}_{2}, \mathrm{~g}_{1} * \mathrm{~g}_{4}, \mathrm{~g}_{0} * \mathrm{~g}_{6}\right) \\
& =\left(\mathrm{g}_{14+21(\bmod 15),}, \mathrm{g}_{18+14(\bmod 15)}, \mathrm{g}_{2+28(\bmod 15)}, \mathrm{g}_{0+42(\bmod 15)}\right) \\
& =\left(\mathrm{g}_{5}, \mathrm{~g}_{2}, \mathrm{~g}_{0}, \mathrm{~g}_{12}\right) \in \mathrm{G} .
\end{aligned}
$$

Thus G is a row matrix groupoid.

## Example 1.6: Let

$$
G=\left\{\begin{array}{l}
\left.\left.\left.\left[\begin{array}{l}
g_{i} \\
g_{j} \\
g_{k} \\
g_{t} \\
g_{s}
\end{array}\right] \right\rvert\, g_{i}, g_{j}, g_{k}, g_{t}, g_{s} \in Z_{20},(10,4), *\right\}\right\}
\end{array}\right.
$$

be a column matrix groupoid.

$$
\begin{gathered}
\text { For any } \mathrm{x}=\left[\begin{array}{l}
\mathrm{g}_{1} \\
\mathrm{~g}_{4} \\
\mathrm{~g}_{6} \\
\mathrm{~g}_{7} \\
\mathrm{~g}_{8}
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{c}
\mathrm{g}_{18} \\
\mathrm{~g}_{7} \\
\mathrm{~g}_{9} \\
\mathrm{~g}_{1} \\
\mathrm{~g}_{10}
\end{array}\right] \in \mathrm{G} ; \\
\mathrm{x} * \mathrm{y}=\left[\begin{array}{l}
\mathrm{g}_{1} * \mathrm{~g}_{18} \\
\mathrm{~g}_{4} * \mathrm{~g}_{7} \\
\mathrm{~g}_{6} * \mathrm{~g}_{9} \\
\mathrm{~g}_{7} * \mathrm{~g}_{1} \\
\mathrm{~g}_{8} * \mathrm{~g}_{10}
\end{array}\right]=\left[\begin{array}{c}
\mathrm{g}_{10+72(\bmod 20)} \\
\mathrm{g}_{40+28(\bmod 20)} \\
\mathrm{g}_{60+36(\bmod 20)} \\
\mathrm{g}_{70+4(\bmod 20)} \\
\mathrm{g}_{80+40(\bmod 20)}
\end{array}\right]=\left[\begin{array}{c}
\mathrm{g}_{2} \\
\mathrm{~g}_{8} \\
\mathrm{~g}_{16} \\
\mathrm{~g}_{14} \\
\mathrm{~g}_{0}
\end{array}\right] \in \mathrm{G} .
\end{gathered}
$$

Thus G is a groupoid.

## Example 1.7: Let

$$
G=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} \\
a_{16} & a_{17} & a_{18}
\end{array}\right] \right\rvert\, a_{i} \in Z_{7} ;(2,5), 1 \leq i \leq 18\right\}
$$

be a matrix groupoid.

## Example 1.8: Let

$$
H=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in Z_{21} ;(3,12),{ }^{*}, 1 \leq i \leq 9\right\}
$$

be a matrix groupoid.

Now we can proceed onto define polynomial with coefficients from the groupoid.

We illustrate this situation by some examples.
Example 1.9: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{26} ;{ }^{*},(3,8)\right\}
$$

be a polynomial groupoid.
Example 1.10: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{12} ;{ }^{*},(9,0)\right\}
$$

be a polynomial groupoid.

## Example 1.11: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Z_{13} ;{ }^{*},(3,3)\right\}
$$

be a polynomial groupoid.
Now we can have polynomial groupoids with matrix coefficients from the groupoid.

Example 1.12: Let

$$
\begin{aligned}
& M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(x_{1}, x_{2}, \ldots, x_{15}\right)\right. \\
& \text { where } \left.x_{j} \in Z_{12} ; *,(3,4), 1 \leq j \leq 15\right\}
\end{aligned}
$$

be a polynomial groupoid with row matrix coefficients.

Example 1.13: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{c}
y_{1} \\
y_{2} \\
\vdots \\
y_{9}
\end{array}\right]\right. \text { where } y_{j} \in Z_{10} ; *,(7,0), 1 \leq j \leq 9\right\}
$$

be a polynomial groupoid with column matrix coefficients.

## Example 1.14: Let

$$
\begin{aligned}
& P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
t_{1} & t_{2} & t_{3} & t_{4} \\
t_{5} & t_{6} & t_{7} & t_{8} \\
t_{9} & t_{10} & t_{11} & t_{12} \\
t_{13} & t_{14} & t_{15} & t_{16}
\end{array}\right]\right.\right. \\
& \text { where } \left.t_{j} \in Z_{29} ;{ }^{*},(17,13), 1 \leq j \leq 16\right\}
\end{aligned}
$$

be a polynomial groupoid with square matrix coefficients.
Example 1.15: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
m_{1} & m_{2} & \ldots & m_{10} \\
m_{11} & m_{12} & \ldots & m_{20} \\
m_{21} & m_{22} & \ldots & m_{30}
\end{array}\right]\right.\right.
$$

where $\left.\mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{40}{ }^{\prime}{ }^{*},(10,1), 1 \leq \mathrm{j} \leq 30\right\}$
be a polynomial groupoid with matrix coefficients.

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cc}
t_{1} & t_{2} \\
t_{3} & t_{4}
\end{array}\right]\right. \text { where } t_{j} \in Z_{12} ; *,(3,0), 1 \leq j \leq 4\right\}
$$

be a polynomial groupoid with square matrix coefficients.
We just recall the definition of the new class of loops
$\mathrm{L}_{\mathrm{n}}(\mathrm{m})=\{\mathrm{e}, 1,2, \ldots, \mathrm{n}$ with *, $\mathrm{m}, \mathrm{n}>3$ and n odd $\}$

$$
=\left\{e, g_{1}, g_{2}, \ldots, g_{n} \text { with } *, m\right.
$$

(where $\mathrm{g}_{\mathrm{i}} \in \mathrm{Z}_{\mathrm{n}} ; \mathrm{g}_{1}=1, \mathrm{~g}_{2}=2, \ldots, \mathrm{~g}_{\mathrm{n}}=0$ ) where $1<\mathrm{m}<\mathrm{n}$ such that $[\mathrm{m}, \mathrm{n}]=1,[\mathrm{~m}-1, \mathrm{n}]=1, \mathrm{n}>3$ and n odd $\}$.

For $\mathrm{g}_{\mathrm{i}}, \mathrm{g}_{\mathrm{j}} \in \mathrm{L}_{\mathrm{n}}(\mathrm{m})$ define $\mathrm{g}_{\mathrm{i}} * \mathrm{~g}_{\mathrm{j}}=\mathrm{g}_{(\mathrm{m}-1) \mathrm{i}}+\mathrm{m}_{\mathrm{j}(\bmod \mathrm{n})} \in \mathrm{L}_{\mathrm{n}}(\mathrm{m})$.
$\mathrm{L}_{\mathrm{n}}(\mathrm{m})$ is a loop of order $\mathrm{n}+1$ that is $\mathrm{L}_{\mathrm{n}}(\mathrm{m})$ is always of even order greater than or equal to 6 . For more about these loops please refer [37].

All properties discussed in case of groupoids can be done for the case of loops. However the resultant product may not be a loop in general. For the concept of semifield refer [41]. We will be using these loops and groupoids to build linear algebra and semilinear algebras which are non associative.

## Chapter Two

## Non Associative Semilinear Algebras

In this chapter we for the first time introduce the notion of non associative semilinear algebra and illustrate them will examples.

DEFINITION 2.1: Let ( $V$, *) be a groupoid. F a semifield. We say $V$ is a nonassociative semilinear algebra over $F$ if the following conditions are true.
(i) For all $v \in V$ and $a \in F, a v \in V$.
(ii) For all $s \in F$ and $u, v \in V s(u * v)=s u * s v$
(iii) $1 . u=u$ for all $u \in V ; 1 \in F$
or equivalently we define a non associative semilinear algebra $V$ over a semifield $F$ as follows:
(i) $(V, *)$ is groupoid
(* a non associative binary operation on $V$ ).
(ii) For all $v \in V$ and $a \in F a v \in V$.
(iii) $s(u * v)=s u * s v$ for all $s \in F$ and $u, v \in V$.
(iv) $1 . u=u$ for all $u \in V$ and $1 \in F$.

We will illustrate this situation by some examples.

Example 2.1: Let $\left(\mathrm{Q}^{+} \cup\{0\}, *,(8,7)\right)=\mathrm{G}$ be the groupoid. G is a non associative semilinear algebra over the semifield $\mathrm{Q}^{+} \cup\{0\}$.

It is interesting to note that $G$ is not a non associative semilinear algebra over $\mathrm{R}^{+} \cup\{0\}$; however G is a non associative semilinear algebra over $\mathrm{Z}^{+} \cup\{0\}$.

Example 2.2: Let $\mathrm{V}=\left\{3 \mathrm{Z}^{+} \cup\{0\},{ }^{*},(3,11)\right\}$ be a groupoid and $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$ be a semifield. V is not a non associative semilinear algebra over the semifield $\mathrm{Q}^{+} \cup\{0\}$ or $\mathrm{R}^{+} \cup\{0\}$.

Example 2.3: Let $\mathrm{M}=\left\{(\mathrm{a}, \mathrm{b}, \mathrm{c}) \mid \mathrm{a}, \mathrm{b}, \mathrm{c} \in \mathrm{Z}^{+} \cup\{0\},{ }^{*},(7,1)\right\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

Example 2.4: Let

$$
P=\left\{\left.\left[\begin{array}{l}
a \\
b \\
c \\
d \\
e
\end{array}\right] \right\rvert\, a, b, c, d, e \in Q^{+} \cup\{0\}, *,(4,9)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $\mathrm{Q}^{+} \cup\{0\}$.

Example 2.5: Let

$$
R=\left\{\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8}
\end{array}\right] \right\rvert\, a_{i} \in Q^{+} \cup\{0\}, \text {, }(11,3)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

$$
\left.\begin{array}{c}
\text { For if } x=\left[\begin{array}{cccc}
7 & 2 & 4 & 7 / 5 \\
0 & 2 / 5 & 0 & 4 / 3
\end{array}\right] \text { and } \\
y=\left[\begin{array}{cccc}
0 & 1 & 2 & 8 / 3 \\
1 / 2 & 0 & 2 / 7 & 0
\end{array}\right] \in \mathrm{R} \text { then } \\
\mathrm{x} * \mathrm{y} \quad=\left[\begin{array}{cccc}
7 & 2 & 4 & 7 / 5 \\
0 & 2 / 5 & 0 & 4 / 3
\end{array}\right] *\left[\begin{array}{cccc}
0 & 1 & 2 & 8 / 3 \\
1 / 2 & 0 & 2 / 7 & 0
\end{array}\right] \\
=\left[\begin{array}{ccc}
7 * 0 & 2 * 1 & 4 * 2 \\
0 * 1 / 2 & 2 / 5 * 0 & 0 * 2 / 7 \\
7 / 5 * 8 / 5 \\
0 / 3 * 0
\end{array}\right] \\
=\left[\begin{array}{cccc}
77 & 25 & 50 & 117 / 5 \\
3 / 2 & 22 / 5 & 6 / 7 & 44 / 3
\end{array}\right] \in \mathrm{R} . \\
\text { Also if } 20 \in \mathrm{~S} \text { then } 20 . \mathrm{x}=20 \times\left[\begin{array}{cc}
7 & 2 \\
0 & 2 / 5 \\
0 & 0 \\
4 / 3
\end{array}\right] \\
=\left[\begin{array}{ccc}
140 & 40 & 80 \\
0 & 8 & 0
\end{array} \quad 80 / 3\right.
\end{array}\right] \in \mathrm{R} .
$$

Example 2.6: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & \mathrm{a}_{6} \\
\mathrm{a}_{7} & \mathrm{a}_{8} & \mathrm{a}_{9}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{R}^{+} \cup\{0\}, 1 \leq \mathrm{i} \leq 9, *,(3,2)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Q}^{+} \cup\{0\}$.

$$
\text { Consider } x=\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \text { and } y=\left[\begin{array}{ccc}
b_{1} & b_{2} & b_{3} \\
b_{4} & b_{5} & b_{6} \\
b_{7} & b_{8} & b_{9}
\end{array}\right] \in V
$$

then

$$
x * y=\left[\begin{array}{lll}
3 a_{1}+2 b_{1} & 3 a_{2}+2 b_{2} & 3 a_{3}+2 b_{3} \\
3 a_{4}+2 b_{4} & 3 a_{5}+2 b_{5} & 3 a_{6}+2 b_{6} \\
3 a_{7}+2 b_{7} & 3 a_{8}+2 b_{8} & 3 a_{9}+2 b_{9}
\end{array}\right] \in V .
$$

Example 2.7: Let

$$
\left.\left.V=\left\{\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15}
\end{array}\right] \right\rvert\, a_{i} \in R^{+} \cup\{0\}, 1 \leq i \leq 15\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $\mathrm{Q}^{+} \cup\{0\}$.

Now having seen examples of non associative semilinear algebras, we proceed onto define substructures.

DEFINITION 2.2: Let $V$ be a non associative semilinear algebra defined over the semifield $F$. Suppose $W \subseteq V$ be a proper subset of $V$; if $W$ itself is a non associative semilinear algebra then we define $W$ to be a non associative semilinear subalgebra of $V$ over the semifield $F$.

We will first give examples of them.

## Example 2.8: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{ll}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & \mathrm{a}_{4}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,13), 1 \leq \mathrm{i} \leq 4\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

Consider

$$
\mathrm{W}_{1}=\left\{\left.\left[\begin{array}{cc}
0 & \mathrm{a}_{1} \\
\mathrm{a}_{2} & \mathrm{a}_{3}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,13), 1 \leq \mathrm{i} \leq 3\right\} \subseteq \mathrm{V},
$$

$\mathrm{W}_{1}$ is a non associative semilinear subalgebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.

$$
\mathrm{W}_{2}=\left\{\left.\left[\begin{array}{cc}
\mathrm{a}_{1} & 0 \\
0 & \mathrm{a}_{2}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,13), 1 \leq \mathrm{i} \leq 2\right\} \subseteq \mathrm{V}
$$

is a non associative semilinear subalgebra of V over the semifield S.

Now

$$
\mathrm{W}_{1} \cap \mathrm{~W}_{2}=\left\{\left.\left[\begin{array}{ll}
0 & 0 \\
0 & \mathrm{a}
\end{array}\right] \right\rvert\, \mathrm{a} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,13)\right\} \subseteq \mathrm{V}
$$

is again a non associative semilinear subalgebra of V over the semifield S .

Suppose

$$
\mathrm{W}_{3}=\left\{\left.\left[\begin{array}{cc}
0 & \mathrm{a}_{1} \\
\mathrm{a}_{2} & 0
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,13), 1 \leq \mathrm{i} \leq 2\right\} \subseteq \mathrm{V}
$$

be a non associative semilinear subalgebra of V over S .

We see $\mathrm{W}_{2} \cap \mathrm{~W}_{3}=\left[\begin{array}{ll}0 & 0 \\ 0 & 0\end{array}\right]$. However $\mathrm{W}_{2}+\mathrm{W}_{3} \neq \mathrm{V}$ we cannot call this as a direct sum of non associative semilinear subalgebras of V over S .

THEOREM 2.1: Let $V$ be a non associative semilinear algebra over the semifield $S$. Suppose $W_{1}, W_{2}, \ldots, W_{t}$ be $t$ non associative semilinear subalgebras of $V$ over $S$.
(i) $\bigcap_{i=1}^{t} W_{i}=W$ is a non associative semilinear subalgebra of Vor (0).
(ii) $\bigcup_{i=1}^{t} W_{i}$ in general is not a non associative semilinear algebra over $V$.

The proof of this theorem is direct and hence is left as an exercise to the reader.

Example 2.9: Let $\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\} ; 1 \leq \mathrm{i} \leq 4\right.$, $(8,9), *\}$ be a non associative semilinear algebra over the semifield $S=Z^{+} \cup\{0\}$.

Consider
$\mathrm{W}_{1}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in 3 \mathrm{Z}^{+} \cup\{0\} ; 1 \leq \mathrm{i} \leq 4,(8,9), *\right\} \subseteq \mathrm{V}$ and $\mathrm{W}_{2}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in 5 \mathrm{Z}^{+} \cup\{0\} ; 1 \leq \mathrm{i} \leq 4,(8,9), *\right\} \subseteq$ V be two non associative semilinear subalgebras of V over $\mathrm{S}=$ $Z^{+} \cup\{0\}$. We see $W_{1} \cap W_{2}=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}\right) \mid a_{i} \in 15 Z^{+} \cup\{0\}\right.$; $1 \leq \mathrm{i} \leq 4,(8,9), *\} \subseteq \mathrm{V}$ is a non associative semilinear subalgebra of V over $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.

But $\mathrm{W}_{1} \cup \mathrm{~W}_{2}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in 5 \mathrm{Z}^{+} \cup\{0\} ; 1 \leq \mathrm{i} \leq 4\right.$, $(8,9), *\} \subseteq \mathrm{V}$ is only a subset for take $\mathrm{x}=(3,3,0,0)$ and $\mathrm{y}=$ $(5,5,5,0) \in \mathrm{W}_{1} \cup \mathrm{~W}_{2}$

$$
\begin{aligned}
\mathrm{x} * \mathrm{y} & =(3,3,0,0) *(5,5,5,0) \\
& =(3 * 5,3 * 5,0 * 5,0 * 0)
\end{aligned}
$$

$=(69,69,45,0) \notin \mathrm{W}_{1} \cup \mathrm{~W}_{2}$ so $\mathrm{W}_{1} \cup \mathrm{~W}_{2}$ is not a non associative semilinear subalgebra of V over $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.

We cannot say for any non associative semilinear algebra V over a semifield $\mathrm{S} ; \mathrm{V}$ is a direct sum of non associative semilinear subalgebras or pseudo direct sum of non associative semilinear algebras as it is a difficult task.

Example 2.10: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,7)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{Z}^{+} \cup$ $\{0\}=S$. Take $x=9+20 x^{2}+3 x^{3}$ and $y=3 x+2 x^{2}+4 x^{3}+7$ in V.

$$
\begin{aligned}
\mathrm{x} * \mathrm{y}= & \left(9+20 \mathrm{x}^{2}+3 \mathrm{x}^{3}\right) *\left(3 \mathrm{x}+2 \mathrm{x}^{2}+4 \mathrm{x}^{3}+7\right) \\
= & 9 * 3 \mathrm{x}+20 \mathrm{x}^{2} * 3 \mathrm{x}+3 \mathrm{x}^{3} * 3 \mathrm{x}+9 * 2 \mathrm{x}^{2}+20 \mathrm{x}^{2} * \\
& 2 \mathrm{x}^{2}+3 \mathrm{x}^{2} * 2 \mathrm{x}^{2}+3 \mathrm{x}^{3} * 4 \mathrm{x}^{3}+9 * 4 \mathrm{x}^{3}+20 \mathrm{x}^{2} * 4 \mathrm{x}^{3}+ \\
& 9 * 7+20 \mathrm{x}^{2} * 7+3 \mathrm{x}^{3} * 7 \\
= & 48 \mathrm{x}+81 \mathrm{x}^{3}+30 \mathrm{x}^{4}+41 \mathrm{x}^{2}+74 \mathrm{x}^{4}+23 \mathrm{x}^{4}+37 \mathrm{x}^{6}+ \\
& 57 \mathrm{x}^{3}+88 \mathrm{x}^{5}+76+109 \mathrm{x}^{2}+58 \mathrm{x}^{3} \\
= & 76+48 \mathrm{x}+150 \mathrm{x}^{2}+196 \mathrm{x}^{3}+127 \mathrm{x}^{4}+88 \mathrm{x}^{5}+37 \mathrm{x}^{6} .
\end{aligned}
$$

Thus it is easily verified $\mathrm{x} * \mathrm{y} \neq \mathrm{y} * \mathrm{x}$.
Example 2.11: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{R}^{+} \cup\{0\}, *,(3 / 2, \sqrt{2})\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

Example 2.12: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Q^{+} \cup\{0\}, *,(7,3)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $\mathrm{Q}^{+} \cup\{0\}$.

Example 2.13: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(9,0)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

## Example 2.14: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Q}^{+} \cup\{0\}, *,(9 / 7,0)\right\}
$$

be a non associative semilinear algebra over $S=Z^{+} \cup\{0\}$, the semifield.

Take $\mathrm{p}(\mathrm{x})=35+8 \mathrm{x}+9 \mathrm{x}^{2}$ and $\mathrm{q}(\mathrm{x})=40+7 \mathrm{x}^{2}+14 \mathrm{x}^{3}+$ $45 \mathrm{x}^{5}$ in T .

$$
\begin{aligned}
\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x}) & =\left(35+8 \mathrm{x}+9 \mathrm{x}^{2}\right) *\left(40+7 \mathrm{x}^{2}+14 \mathrm{x}^{3}+45 \mathrm{x}^{5}\right) \\
& =(35 \times 9) / 7+(8 / 7) \times 9 \mathrm{x}+9^{2} \mathrm{x}^{2} / 7 \\
& =45+(72 / 7) \mathrm{x}+(81 / 7) \mathrm{x}^{2} \in \mathrm{~T} .
\end{aligned}
$$

## Example 2.15: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(2,2)\right\}
$$

be a non associative semilinear algebra over the semifield $\mathrm{S}=$ $Z^{+} \cup\{0\}$.

Consider $\mathrm{p}(\mathrm{x})=3+2 \mathrm{x}+\mathrm{x}^{3}, \mathrm{q}(\mathrm{x})=1+4 \mathrm{x}^{2}$ and $\mathrm{r}(\mathrm{x})=2+7 \mathrm{x}$ in M .

$$
\begin{aligned}
&(\mathrm{p}(\mathrm{x})) *(\mathrm{q}(\mathrm{x}) * \mathrm{r}(\mathrm{x})) \\
&= \mathrm{p}(\mathrm{x}) *\left[(2+4)+(2+14) \mathrm{x}+(8+4) \mathrm{x}^{2}+(8+14) \mathrm{x}^{3}\right] \\
&= \mathrm{p}(\mathrm{x}) *\left(6+16 \mathrm{x}+12 \mathrm{x}^{2}+22 \mathrm{x}^{3}\right) \\
&=\left(3+2 \mathrm{x}+\mathrm{x}^{3}\right)\left(6+16 \mathrm{x}+12 \mathrm{x}^{2}+22 \mathrm{x}^{3}\right) \\
&=(6+12)+(6+32) \mathrm{x}+(6+24) \mathrm{x}^{2}+(6+44) \mathrm{x}^{2}+ \\
&(4+12) \mathrm{x}+(4+32) \mathrm{x}^{2}+(4+24) \mathrm{x}^{3}+(4+44) \mathrm{x}^{4}+ \\
&(2+12) \mathrm{x}^{3}+(2+32) \mathrm{x}^{4}+(2+24) \mathrm{x}^{5}+(2+44) \mathrm{x}^{6} \\
&= 18+38 \mathrm{x}+30 \mathrm{x}^{2}+50 \mathrm{x}^{2}+16 \mathrm{x}+36 \mathrm{x}^{2}+28 \mathrm{x}^{3}+48 \mathrm{x}^{4}+ \\
& 14 \mathrm{x}^{3}+34 \mathrm{x}^{4}+26 \mathrm{x}^{5}+46 \mathrm{x}^{6} \\
&= 18+54 \mathrm{x}+116 \mathrm{x}^{2}+42 \mathrm{x}^{3}+82 \mathrm{x}^{4}+26 \mathrm{x}^{5}+46 \mathrm{x}^{6} . \\
&(\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})) * \mathrm{r}(\mathrm{x})= \\
&=\left(\left(3+2 \mathrm{x}+\mathrm{x}^{3}\right) *\left(1+4 \mathrm{x}^{2}\right)\right) *(2+7 \mathrm{x}) \\
&=\left((6+2)+(4+2) \mathrm{x}+(2+2) \mathrm{x}^{3}+(6+8) \mathrm{x}^{2}+(4+8) \mathrm{x}^{3}\right. \\
&\left.+(2+8) \mathrm{x}^{5}\right) *(2+7 \mathrm{x}) \\
&=\left(8+6 \mathrm{x}+14 \mathrm{x}^{2}+16 \mathrm{x}^{3}+10 \mathrm{x}^{5}\right) *(2+7 \mathrm{x}) \\
&=(16+4)+(12+14) \mathrm{x}^{2}+(16+14) \mathrm{x}+(4+12) \mathrm{x}+ \\
&(28+4) \mathrm{x}^{2}+(28+14) \mathrm{x}^{3}+(32+4) \mathrm{x}^{3}+(20+4) \mathrm{x}^{5}+ \\
&= 20+44 \mathrm{x}+58 \mathrm{x}^{2}+78 \mathrm{x}^{3}+46 \mathrm{x}^{4}+24 \mathrm{x}^{5}+34 \mathrm{x}^{6} .
\end{aligned}
$$

Clearly $\mathrm{p}(\mathrm{x}) *(\mathrm{q}(\mathrm{x}) * \mathrm{r}(\mathrm{x})) \neq(\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})) * \mathrm{r}(\mathrm{x})$.
Thus M is a non associative semilinear algebra of polynomials over the semifield.

Now we proceed onto define strong non associative semilinear algebras over the field.

DEFINITION 2.3: Let $V=\{G, *,(t, u)\}$ be a groupoid. F be any fields, $V$ is a strong non associative semilinear algebra over the field $F$ if the following conditions are satisfied.
(i) For every $x \in V$ and $a \in F$ $a x=x a \in V$.
(ii) $a\left(x^{*} y\right)=a x *$ ay for all $a \in F$ and $x, y \in F$.
(iii) For $1 \in F, 1 . v=v$ for all $v \in V$.
(iv) $0 . v=0$ for all $v \in V$ and $0 \in F$.

We give examples of them.
Example 2.16: Let V $=\left\{\mathrm{Q},{ }^{*},(7,3)\right\}$ be a groupoid; V is a strong non associative semilinear algebra over the field Q.

Example 2.17: Let $V=\left\{\mathrm{R},{ }^{*},(0,8)\right\}$ be a strong non associative semilinear algebra over the field Q.

Example 2.18: Let $M=\{R, *,(7,7)\}$ be a strong non associative semilinear algebra over the field Q .
Take $2,3,5 \in$ R. $2 *(3 * 5)=2 *(21+35)=2 * 56$

$$
=14+56 \times 7
$$

$$
=14+392=408
$$

$$
\text { Now }(2 * 3) * 5=(14+21) * 5
$$

$$
=35 * 5
$$

$$
=245+35
$$

$$
=280 .
$$

Clearly $(2 * 3) * 5 \neq 2 *(3 * 5)$. Thus M is a strong non associative semilinear algebra over the field Q .

Example 2.19: Let $\mathrm{T}=\left\{\mathrm{R},{ }^{*},(2,5)\right\}$ be a strong non associative semilinear algebra over the field R .

Example 2.20: Let $\mathrm{P}=\left\{\mathrm{Q},{ }^{*},(3 / 2,7 / 9)\right\}$ be a strong non associative semilinear algebra over the field Q.

Example 2.21: Let $\mathrm{S}=\left\{(\mathrm{a}, \mathrm{b}, \mathrm{c}, \mathrm{d}) \mid \mathrm{a}, \mathrm{b}, \mathrm{c}, \mathrm{d}, \in \mathrm{Q},{ }^{*},(8,11)\right\}$ be a strong row matrix non associative semilinear algebra over the field Q .

Example 2.22: Let

$$
M=\left\{\left(a_{1}, a_{2}, a_{3}\right) \mid a_{i} \in Q, 1 \leq i \leq 3, *,(10,3)\right\} \text { be a strong }
$$ row matrix non associative semilinear algebra over the field Q .

Example 2.23: Let $\mathrm{M}=\left\{\left(\mathrm{m}_{1}, \mathrm{~m}_{2}, \mathrm{~m}_{3}, \mathrm{~m}_{4}, \mathrm{~m}_{5}, \mathrm{~m}_{6}, \mathrm{~m}_{7}, \mathrm{~m}_{8}, \mathrm{~m}_{9}\right) \mid\right.$ $\left.\mathrm{m}_{\mathrm{i}} \in \mathrm{R}, 1 \leq \mathrm{i} \leq 9,{ }^{*},(0,19)\right\}$ be a strong row matrix non associative semilinear algebra over the field Q .

## Example 2.24: Let

$$
\mathrm{T}=\left\{\left(\mathrm{t}_{1}, \mathrm{t}_{2}, \mathrm{t}_{3}, \mathrm{t}_{4}\right) \mid \mathrm{ti} \in \mathrm{R}, 1 \leq \mathrm{i} \leq 4, *,(3 / 7,19 / 5)\right\}
$$

be a strong row matrix non associative semilinear algebra over the field Q .

Example 2.25: Let

$$
P=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4} \\
a_{5}
\end{array}\right]\right|_{\left.a_{i} \in R, 1 \leq i \leq 5, *,(3, \sqrt{7})\right\}}\right.
$$

be a strong column matrix non associative semilinear algebra over the field Q .

Example 2.26: Let

$$
S=\left\{\left.\left[\begin{array}{c}
b_{1} \\
b_{2} \\
\vdots \\
b_{20}
\end{array}\right] \right\rvert\, b_{i} \in \mathrm{Q}, 1 \leq \mathrm{i} \leq 20, *,(10,7 / 11)\right\}
$$

be a strong non associative semilinear algebra of column matrices over the field Q .

Example 2.27: Let
be a strong column matrix non associative semilinear algebra over the field Q (or R ).

Example 2.28: Let

$$
S=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in Q, 1 \leq i \leq 12, *,(3,13)\right\}
$$

be a strong square matrix semilinear algebra over the field Q .

$$
\left.\begin{array}{c}
\text { Consider } \mathrm{x}=\left[\begin{array}{lll}
0 & 1 & 2 \\
3 & 0 & 1 \\
1 & 1 & 0
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{lll}
1 & 0 & 1 \\
0 & 2 & 0 \\
1 & 2 & 0
\end{array}\right] \text { in } \mathrm{S} . \\
\mathrm{x} * \mathrm{y}
\end{array}\right]=\left[\begin{array}{ccc}
13 & 3 & 19 \\
9 & 26 & 13 \\
16 & 29 & 0
\end{array}\right] \in \mathrm{S} .
$$

It is easily verified '*' is a non associative operation on S .

## Example 2.29: Let

$$
S=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4} \\
a_{5}
\end{array}\right] \right\rvert\, a_{i} \in Q, 1 \leq i \leq 5, *,(3,0)\right\}
$$

be a strong non associative column matrix semilinear algebra over the semifield Q .

$$
\begin{aligned}
& \text { For } x=\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4} \\
a_{5}
\end{array}\right] \text { and } y=\left[\begin{array}{l}
b_{1} \\
b_{2} \\
b_{3} \\
b_{4} \\
b_{5}
\end{array}\right] \in S . \\
& x * y=\left[\begin{array}{l}
3 a_{1} \\
3 a_{2} \\
3 a_{3} \\
3 a_{4} \\
3 a_{5}
\end{array}\right] \in S
\end{aligned}
$$

'*' is clearly a non associative operation on S.

$$
\text { For take } \mathrm{x}=\left[\begin{array}{l}
3 \\
2 \\
0 \\
1 \\
5
\end{array}\right], \mathrm{y}=\left[\begin{array}{l}
0 \\
2 \\
4 \\
5 \\
7
\end{array}\right] \text { and } \mathrm{z}=\left[\begin{array}{l}
1 \\
2 \\
3 \\
4 \\
5
\end{array}\right] \text { in } \mathrm{S} .
$$

$$
\left.\left.\begin{array}{rl}
\text { Consider } \mathrm{x} *(\mathrm{y} * \mathrm{z}) & =\left[\begin{array}{l}
3 \\
2 \\
0 \\
1 \\
5
\end{array}\right] *\left(\left[\begin{array}{l}
0 \\
2 \\
4 \\
5 \\
7
\end{array}\right] *\left[\begin{array}{l}
1 \\
2 \\
3 \\
4 \\
5
\end{array}\right]\right) \\
\text { If we take }(\mathrm{x} * \mathrm{y}) * \mathrm{z} & =\left[\begin{array}{l}
3 \\
2 \\
0 \\
1 \\
5
\end{array}\right] *\left[\begin{array}{l}
0 \\
6 \\
12 \\
15 \\
21
\end{array}\right]=\left[\begin{array}{l}
9 \\
6 \\
0 \\
0 \\
1 \\
3 \\
5
\end{array}\right] *\left[\begin{array}{l}
3
\end{array}\right] \\
2 \\
2 \\
5 \\
7
\end{array}\right]\right) \cdot\left[\begin{array}{l}
0 \\
2 \\
3 \\
4 \\
5
\end{array}\right] .
$$

Cleary $\mathrm{x}^{*}(\mathrm{y}$ * z$) \neq(\mathrm{x} * \mathrm{y}){ }^{*} \mathrm{z}$.

Thus S is a strong non associative column matrix semilinear algebra over the field Q .

Further $\mathrm{x} * \mathrm{y} \neq \mathrm{y} * \mathrm{x}$, for consider

$$
\mathrm{x} * \mathrm{y}=\left[\begin{array}{c}
9 \\
6 \\
0 \\
3 \\
15
\end{array}\right] \text { and } \mathrm{y} * \mathrm{x}=\left[\begin{array}{c}
0 \\
6 \\
12 \\
15 \\
21
\end{array}\right]
$$

so that '*' operation on S is also non commutative.

Example 2.30: Let

$$
M=\left\{\left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
a_{5} & a_{6}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Q}, 1 \leq \mathrm{i} \leq 6, *,(2,2)\right\}
$$

be a strong non associative matrix semilinear algebra over the field Q .

$$
\begin{aligned}
& \text { Consider } \mathrm{x}=\left[\begin{array}{ll}
3 & 1 \\
0 & 2 \\
5 & 4
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{ll}
1 & 2 \\
3 & 4 \\
5 & 6
\end{array}\right] \text { in } \mathrm{M} . \\
& \mathrm{x} * \mathrm{y}=\left[\begin{array}{cc}
8 & 6 \\
6 & 12 \\
20 & 20
\end{array}\right] \text { and } \\
& \mathrm{y}^{*} \mathrm{x}=\left[\begin{array}{ll}
1 & 2 \\
3 & 4 \\
5 & 6
\end{array}\right] *\left[\begin{array}{ll}
3 & 1 \\
0 & 2 \\
5 & 4
\end{array}\right]=\left[\begin{array}{cc}
8 & 6 \\
6 & 12 \\
20 & 20
\end{array}\right] .
\end{aligned}
$$

$$
y^{*} \mathrm{x}=\mathrm{x} * \mathrm{y} \text { and is in } \mathrm{M} .
$$

$$
\begin{gathered}
\text { Take } \mathrm{x} *(\mathrm{y} * \mathrm{z}) \text {; where } \mathrm{z}=\left[\begin{array}{ll}
4 & 2 \\
6 & 1 \\
0 & 3
\end{array}\right] \text { is in } \mathrm{M} . \\
\mathrm{x} *(\mathrm{y} * \mathrm{z})=\left[\begin{array}{ll}
3 & 1 \\
0 & 2 \\
5 & 4
\end{array}\right] *\left[\begin{array}{cc}
10 & 8 \\
18 & 10 \\
10 & 18
\end{array}\right]=\left[\begin{array}{ll}
26 & 18 \\
36 & 24 \\
30 & 44
\end{array}\right] . \\
\text { Consider }(\mathrm{x} * \mathrm{y}) * \mathrm{z}=\left[\begin{array}{cc}
8 & 6 \\
6 & 12 \\
20 & 20
\end{array}\right] *\left[\begin{array}{ll}
4 & 2 \\
6 & 1 \\
0 & 3
\end{array}\right]=\left[\begin{array}{ll}
24 & 20 \\
24 & 14 \\
40 & 46
\end{array}\right] .
\end{gathered}
$$

We see $x *(y * z) \neq\left(x^{*} y\right) * z$.
Thus M is a strong non associative matrix semilinear algebra over the field Q .

Now having seen examples of strong non associative matrix semilinear algebras defined over the field Q we now proceed onto give substructures. The definition of the strong non associative matrix semilinear subalgebra is a matter of routine.

We give one or two examples of them.
Example 2.31: Let $\mathrm{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Q}, 1 \leq \mathrm{i} \leq 3\right.$, *, $\left.(8,1)\right\}$ be a strong row matrix non associative semilinear algebra over the field Q . Clearly $\mathrm{P}=\{(\mathrm{a}, 0,0) \mid \mathrm{a} \in \mathrm{Q}, *,(8,1)\} \subseteq \mathrm{M}$ is not a strong row matrix non associative semilinear algebra over the field Q .

Consider $\mathrm{R}=\{(\mathrm{a}, \mathrm{a}, \mathrm{a}) \mid \mathrm{a} \in \mathrm{Q} ; *,(8,1)\} \subseteq \mathrm{M}$ is a strong row matrix non associative semilinear sub algebra of M over Q .

For if $\mathrm{x}=(\mathrm{a}, \mathrm{a}, \mathrm{a})$ and $\mathrm{y}=(\mathrm{b}, \mathrm{b}, \mathrm{b})$ are in P then $x * y=(a, a, a) *(b, b, b)=(8 a+b, 8 a+b, 8 a+b) \in P$ further if $t \in Q$ then $t x=(t a, t a, t a) \in P$ hence $R$ is a strong row matrix non associative semilinear subalgebra of M over Q .

Example 2.32: Let

$$
T=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{10}
\end{array}\right] \right\rvert\, a_{i} \in R, 1 \leq i \leq 10, *,(5,0)\right\}
$$

be a strong column matrix non associative semilinear algebra over the field R.

## Consider

$$
S=\left\{\left.\left[\begin{array}{c}
a \\
a \\
\vdots \\
a
\end{array}\right] \right\rvert\, a \in R, *,(5,0)\right\} \subseteq T,
$$

S is a strong column matrix non associative semilinear subalgebra of T for if

$$
\begin{gathered}
x=\left[\begin{array}{c}
a \\
a \\
\vdots \\
a
\end{array}\right] \text { and } y=\left[\begin{array}{c}
b \\
b \\
\vdots \\
b
\end{array}\right] \text { then } \\
x * y=\left[\begin{array}{c}
5 \mathrm{a} \\
5 \mathrm{a} \\
\vdots \\
5 \mathrm{a}
\end{array}\right] \in \mathrm{S},
\end{gathered}
$$

$$
\text { further if } t \in R \text { then } t x=\left[\begin{array}{c}
\mathrm{ta} \\
\mathrm{ta} \\
\vdots \\
\mathrm{ta}
\end{array}\right] \in \mathrm{S}
$$

thus S is a strong column matrix non associative semilinear subalgebra of T over R .

We see

$$
W=\left\{\left.\left[\begin{array}{l}
0 \\
0 \\
0 \\
0 \\
0 \\
0 \\
0 \\
0 \\
a \\
b
\end{array}\right] \right\rvert\, a, b \in R, *,(5,0)\right\} \subseteq T
$$

is also a strong column matrix non associative semilinear subalgebra of T over the field R .

Now having see strong matrix non associative semilinear subalgebras, we can also have the notion of quasi strong matrix non associative semilinear subalgebra over a subfield.

We give a few examples of them.

Example 2.33: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{ll}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & \mathrm{a}_{4}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{R}, 1 \leq \mathrm{i} \leq 4, *,(2,5)\right\}
$$

be a strong non associative matrix semilinear algebra over the field R.

Consider

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{ll}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & \mathrm{a}_{4}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Q}, 1 \leq \mathrm{i} \leq 4, *,(2,5)\right\} \subseteq \mathrm{V},
$$

W is a quasi strong matrix non associative semilinear subalgebra of $V$ over Q . Q a subfield of R .

## Example 2.34: Let

$$
M=\left\{\left.\left[\begin{array}{ll}
a_{1} & a_{6} \\
a_{2} & a_{7} \\
a_{3} & a_{8} \\
a_{4} & a_{9} \\
a_{5} & a_{10}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{R}, 1 \leq \mathrm{i} \leq 10, *,(5,10)\right\}
$$

be a strong non associative quasi semilinear algebra over the field Q . Clearly M has no quasi strong non associative quasi semilinear subalgebras as Q has no subfield so we define M to be quasi simple.

In view of this we have the following theorem.
THEOREM 2.2: Let $V$ be a strong non associative semilinear algebra over the prime field $F$. $V$ has no quasi strong non associative semilinear subalgebras so $V$ is quasi simple.

Corollary 2.1: Let $V$ be strong non associative semilinear algebra over the non prime field F ( F has subfields). V is not quasi simple.

The proof is direct and hence left as an exercise to the reader.

Now we can have strong non associative semilinear algebras using polynomials and the operation on the polynomials forms only a groupoid.

We will give only examples of them.

## Example 2.35: Let

$$
S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in R, *,(3,19)\right\}
$$

be a strong non associative polynomial semilinear algebra over the field R. S is not quasi simple.

Example 2.36: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Q, *,(2,0)\right\}
$$

be a strong non associative polynomial semilinear algebra over the field Q . M is quasi simple.

Example 2.37: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Q}, *,(3,3)\right\}
$$

be a strong non associative polynomial quasi simple semilinear algebra over the field Q.

Example 2.38: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in R, *,(3,9)\right\}
$$

be a strong non associative polynomial semilinear algebra over the field Q . M has strong non associative polynomial semilinear subalgebras over the subfield Q of R .

Example 2.39: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(m_{1}, m_{2}, \ldots, m_{7}\right) ; m_{i} \in Q, *,(8,0)\right\}
$$

be a strong non associative row matrix coefficient quasi simple semilinear algebra over the field Q .

Example 2.40: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{n}_{1}, \mathrm{n}_{2}, \ldots, \mathrm{n}_{10}\right) ; \mathrm{n}_{\mathrm{j}} \in \mathrm{R}, *, 1 \leq \mathrm{j} \leq 10 ;(3,3)\right\}
$$

be a strong non associative row matrix coefficient polynomial semilinear algebra over R. P is a commutative non associative semilinear algebra over $R$.

Example 2.41: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{t}_{1}, \mathrm{t}_{2}, \mathrm{t}_{3}\right) ; \mathrm{t}_{\mathrm{j}} \in \mathrm{Q}, *, 1 \leq \mathrm{j} \leq 3 ;(29,7)\right\}
$$

be a strong non commutative non associative row matrix coefficient polynomial semilinear algebra over the field R.

Now we can construct column matrix coefficient polynomial semilinear algebra over field F ; we give a few examples of them.

## Example 2.42: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\vdots \\
\mathrm{~m}_{12}
\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{R}, *, 1 \leq \mathrm{j} \leq 12 ;(0,9)\right\}
$$

be a strong column matrix coefficient polynomial non associative semilinear algebra over the field Q . Clearly M is non commutative and non associative.

Example 2.43: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{c}
t_{1} \\
t_{2} \\
\vdots \\
t_{20}
\end{array}\right]\right. ; \mathrm{t}_{\mathrm{j}} \in \mathrm{R}, *, 1 \leq \mathrm{j} \leq 20 ;(\sqrt{5}, \sqrt{5})\right\}
$$

be a strong commutative non associative column matrix coefficient polynomial semilinear algebra over the field Q.

## Example 2.44: Let

$$
\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\vdots \\
\mathrm{~m}_{26}
\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Q}, *, 1 \leq \mathrm{j} \leq 26 ;(3 / 7,19 / 2)\right\}
$$

be a strong non commutative non associative column matrix coefficient semilinear algebra over the field Q .

Now we can have any matrix coefficient polynomial non associative semilinear algebra over a field.

We give a few examples of them.
Example 2.45: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccc}
m_{1} & m_{2} & m_{3}  \tag{3,0}\\
m_{4} & m_{5} & m_{6} \\
\vdots & \vdots & \vdots \\
m_{28} & m_{29} & m_{30}
\end{array}\right]\right. ; \mathrm{m}_{j} \in \mathrm{R}, *, 1 \leq j \leq 30 ;\right.
$$

be a strong non associative matrix coefficient polynomial semilinear algebra over Q .

Example 2.46: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}, \mathrm{x}_{4}\right) ; \mathrm{x}_{\mathrm{j}} \in \mathrm{Q}, *, 1 \leq \mathrm{j} \leq 4 ;(7,1)\right\}
$$

be a strong non associative semilinear algebra with row matrix coefficient polynomials over the field Q .

$$
\begin{aligned}
\text { Take } \mathrm{p}(\mathrm{x})= & (2,0,1,5)+(0,3,0,1) \mathrm{x}+(1,1,0,2) \mathrm{x}^{2} \text { and } \\
\mathrm{q}(\mathrm{x})= & (1,1,0,0)+(3,0,1,0) \mathrm{x}^{2}+(0,1,1,0) \mathrm{x}^{3} \text { in } \mathrm{T} . \\
\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})= & (2,0,1,5) *(1,1,0,0)+(2,0,1,5) * \\
& (3,0,1,0) \mathrm{x}^{2}+(2,0,1,5) *(0,1,1,0) \mathrm{x}^{3}+ \\
& (0,3,0,1) *(1,1,0,0) \mathrm{x}+(0,3,0,1) * \\
& (3,0,1,0) \mathrm{x}^{3}+(0,3,0,1) *(0,1,1,0) \mathrm{x}^{4}+ \\
& (1,1,0,2) *(1,1,0,0) \mathrm{x}^{2}+(1,1,0,2) * \\
& (3,0,1,0) \mathrm{x}^{4}+(1,1,0,2)(0,1,1,0) \mathrm{x}^{5} \\
= & (15,1,8,35) \mathrm{x}^{3}+(1,22,0,7) \mathrm{x}+(3,21,1,7) \mathrm{x}^{3} \\
& +(0,22,1,7) \mathrm{x}^{4}+(8,8,0,14) \mathrm{x}^{2}+ \\
& (10,7,1,14) \mathrm{x}^{4}+(7,8,1,14) \mathrm{x}^{5} \\
= & (15,1,7,35)+(25,8,8,49) \mathrm{x}^{2}+(1,22,0,7) \mathrm{x}+ \\
& (17,22,9,42) \mathrm{x}^{3}+(10,29,2,21) \mathrm{x}^{4}+ \\
& (7,8,1,14) \mathrm{x}^{5} .
\end{aligned}
$$

This is the way operation * is performed on the strong non associative row matrix coefficient polynomial semilinear algebra over a field.

Example 2.47: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\mathrm{~m}_{3} \\
\mathrm{~m}_{4} \\
\mathrm{~m}_{5} \\
\mathrm{~m}_{6}
\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Q}, *, 1 \leq \mathrm{j} \leq 6 ;(0,3)\right\}
$$

be a strong non associative column matrix coefficient polynomial semilinear algebra over the field Q .

$$
\begin{gathered}
\text { Take } \mathrm{p}(\mathrm{x})=\left[\begin{array}{l}
0 \\
1 \\
2 \\
0 \\
3 \\
0
\end{array}\right]+\left[\begin{array}{l}
1 \\
0 \\
3 \\
0 \\
1 \\
0
\end{array}\right] \mathrm{x}^{2}+\left[\begin{array}{l}
0 \\
0 \\
0 \\
1 \\
1 \\
1
\end{array}\right] \mathrm{x}^{4} \text { and } \\
\mathrm{q}(\mathrm{x})=\left[\begin{array}{l}
2 \\
0 \\
2 \\
0 \\
2 \\
0
\end{array}\right] \mathrm{x}+\left[\begin{array}{l}
0 \\
1 \\
0 \\
1 \\
0 \\
1
\end{array}\right] \mathrm{x}^{3}+\left[\begin{array}{l}
1 \\
0 \\
1 \\
1 \\
1 \\
1
\end{array}\right] \mathrm{x}^{5} \text { be in } \mathrm{M} .
\end{gathered}
$$

We find $\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})$ as follows.

$$
\begin{aligned}
& \mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})=\left[\begin{array}{l}
0 \\
1 \\
2 \\
0 \\
3 \\
0
\end{array}\right] *\left[\begin{array}{l}
2 \\
0 \\
2 \\
0 \\
2 \\
0
\end{array}\right] \mathrm{x}+\left[\begin{array}{l}
0 \\

\end{array}\right] x^{7}+\left[\begin{array}{l}
0 \\
3 \\
3 \\
3 \\
3 \\
3
\end{array}\right] x^{9} \text { is in } M .
\end{aligned}
$$

This is the way the '*' operation on M is defined to make the strong column matrix non associative semilinear algebra.

## Example 2.48: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccc}
m_{1} & m_{2} & m_{3} \\
m_{4} & m_{5} & m_{6} \\
m_{7} & m_{8} & m_{9}
\end{array}\right]\right. ; m_{j} \in R, *, 1 \leq j \leq 9\right.
$$

be a strong non associative semilinear algebra of square matrix coefficient polynomials over the field Q .

Consider

$$
\mathrm{p}(\mathrm{x})=\left[\begin{array}{lll}
0 & 3 & 1 \\
1 & 0 & 2 \\
4 & 6 & 0
\end{array}\right]+\left[\begin{array}{lll}
6 & 1 & 2 \\
0 & 1 & 0 \\
2 & 0 & 1
\end{array}\right] \mathrm{x}+\left[\begin{array}{lll}
3 & 1 & 2 \\
1 & 0 & 1 \\
0 & 5 & 0
\end{array}\right] \mathrm{x}^{3}
$$

$$
\mathrm{q}(\mathrm{x})=\left[\begin{array}{lll}
1 & 0 & 1 \\
0 & 2 & 1 \\
0 & 7 & 0
\end{array}\right] \mathrm{x}+\left[\begin{array}{lll}
1 & 0 & 2 \\
1 & 1 & 0 \\
2 & 0 & 1
\end{array}\right] \mathrm{x}^{3}+\left[\begin{array}{lll}
2 & 1 & 1 \\
1 & 0 & 1 \\
0 & 1 & 0
\end{array}\right] \mathrm{x}^{4}
$$

in M .

$$
\begin{aligned}
& \mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})=\left[\begin{array}{lll}
0 & 3 & 1 \\
1 & 0 & 2 \\
4 & 6 & 0
\end{array}\right] *\left[\begin{array}{lll}
1 & 0 & 1 \\
0 & 2 & 1 \\
0 & 7 & 0
\end{array}\right] \mathrm{x}+ \\
& {\left[\begin{array}{lll}
0 & 3 & 1 \\

10 & 0 & 5
\end{array}\right] x^{4}+\left[\begin{array}{ccc}
22 & 5 & 7 \\
3 & 2 & 3 \\
4 & 3 & 2
\end{array}\right] x^{5}+} \\
& {\left[\begin{array}{ccc}
12 & 5 & 7 \\
5 & 0 & 5 \\
0 & 13 & 0
\end{array}\right] x^{7}+\left[\begin{array}{ccc}
9 & 2 & 7 \\
2 & 6 & 5 \\
0 & 31 & 0
\end{array}\right] x^{4}+\left[\begin{array}{ccc}
9 & 2 & 10 \\
5 & 3 & 2 \\
6 & 10 & 3
\end{array}\right] x^{6}} \\
& =\left[\begin{array}{ccc}
3 & 6 & 3 \\
2 & 6 & 3 \\
8 & 33 & 0
\end{array}\right] x+\left[\begin{array}{ccc}
3 & 6 & 8 \\
5 & 3 & 4 \\
14 & 12 & 3
\end{array}\right] x^{3}+\left[\begin{array}{ccc}
15 & 2 & 7 \\
0 & 8 & 3 \\
4 & 21 & 2
\end{array}\right] x^{2}+ \\
& {\left[\begin{array}{ccc}
30 & 13 & 22 \\
10 & 11 & 12 \\
18 & 46 & 5
\end{array}\right] x^{4}+\left[\begin{array}{ccc}
22 & 5 & 7 \\
3 & 2 & 3 \\
4 & 3 & 2
\end{array}\right] x^{5}+\left[\begin{array}{ccc}
9 & 2 & 10 \\
5 & 3 & 2 \\
6 & 10 & 3
\end{array}\right] x^{6}+} \\
& {\left[\begin{array}{ccc}
12 & 5 & 7 \\
5 & 0 & 5 \\
0 & 13 & 0
\end{array}\right] x^{7} \text { is in } M .}
\end{aligned}
$$

This is the way '*' operation on M is performed.

Example 2.49: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{ccccc}
\mathrm{m}_{1} & \mathrm{~m}_{2} & \mathrm{~m}_{3} & \mathrm{~m}_{4} & \mathrm{~m}_{5} \\
\mathrm{~m}_{6} & \mathrm{~m}_{7} & \mathrm{~m}_{8} & \mathrm{~m}_{9} & \mathrm{~m}_{10} \\
\mathrm{~m}_{11} & \mathrm{~m}_{12} & \mathrm{~m}_{13} & \mathrm{~m}_{14} & \mathrm{~m}_{15} \\
\mathrm{~m}_{16} & \mathrm{~m}_{17} & \mathrm{~m}_{18} & \mathrm{~m}_{19} & \mathrm{~m}_{20}
\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Q}, \text {, },\right.
$$

$$
1 \leq \mathrm{j} \leq 20 ;(2,2)\}
$$

be a strong non associative matrix coefficient polynomial semilinear algebra over the field Q .

Let

$$
\begin{aligned}
& \mathrm{p}(\mathrm{x})=\left[\begin{array}{lllll}
0 & 1 & 2 & 0 & 3 \\
1 & 0 & 1 & 2 & 0 \\
0 & 1 & 0 & 0 & 2 \\
4 & 0 & 1 & 0 & 1
\end{array}\right]+\left[\begin{array}{lllll}

\end{array}\right] \mathrm{x}^{5}
\end{aligned}
$$

is in P. Thus we have shown how * operates on strong non associative with coefficient matrix polynomial semilinear algebras defined over a field.

All these strong structures where built using fields of characteristic zero are of infinite cardinality.

Now we define strong non associative semilinear algebras of different prime characteristic and of finite cardinality.

DEFINITION 2.4: Let $V=\left\{Z_{p}\right.$, *, $\left.(t, u), t, u \in Z_{p}\right\}$ be a groupoid. $V$ is a strong non associative semilinear algebra defined over the field $Z_{p}$.

We will examples of them.
Example 2.50: Let $\mathrm{P}=\left\{\mathrm{Z}_{5}, *,(2,3)\right\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{5}$.

Example 2.51: Let $\mathrm{V}=\left\{\mathrm{Z}_{11},{ }^{*},(2,7)\right\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{11}$. For x $=10$ and $\mathrm{y}=6$ in V and $3 \in \mathrm{Z}_{11}$. We see

$$
\begin{aligned}
3(x * y)= & 3(10 * 6)=3(20+42)=3.7=9 \\
& 3 \times 10 * 3 \times 6=10 * 18 \\
& =8 * 7=16+49=65=9
\end{aligned}
$$

Thus V is a strong semilinear non associative algebra over the field $\mathrm{Z}_{11}$.

Example 2.52: Let $\mathrm{V}=\left\{\mathrm{Z}_{23},{ }^{*},(11,0)\right\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{23}$.

Example 2.53: Let $\mathrm{V}=\left\{\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}, \mathrm{x}_{4}\right)\right.$ where $\mathrm{x}_{\mathrm{i}} \in \mathrm{Z}_{43}, 1 \leq \mathrm{i} \leq$ $4,0,(0,7)\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{43}$.

Consider $\mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}, \mathrm{x}_{4}\right)=(7,1,0,2)$ and $\mathrm{y}=(1,3,4,0)$ in V .

$$
x * y=(7,1,0,2) *(1,3,4,0)=(7,21,28,0) \in V
$$

Example 2.54: Let $\mathrm{V}=\left\{\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}, \mathrm{x}_{4}, \mathrm{x}_{5}\right) \mid \mathrm{x}_{\mathrm{i}} \in \mathrm{Z}_{19}, 0,(3,3)\right\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{19}$.

$$
\begin{aligned}
\text { Take } \mathrm{x} & =(8,1,10,17,3,1) \text { and } \mathrm{y}=(2,3,0,1,5,1) \text { in } \mathrm{V} . \\
\mathrm{x} * \mathrm{y} & =(8,1,10,17,3,1) *(2,3,0,1,5,1) \\
& =(11,12,11,16,5,6) \in \mathrm{V} .
\end{aligned}
$$

Clearly number of elements in V is finite. But V is commutative but non associative.

For take $\mathrm{z}=(0,1,2,0,0,0) \in \mathrm{V}$

$$
\begin{aligned}
(x * y) * z & =(11,12,11,16,5,6) *(0,1,2,0,0,0) \\
& =(14,1,8,10,15,18) .
\end{aligned}
$$

Consider $\mathrm{x} *(\mathrm{y} * \mathrm{z})$

$$
\begin{aligned}
& =(8,1,10,17,3,1) *[(2,3,0,1,5,1) *(0,1,2,0,0,0)] \\
& =(8,1,10,17,3,1) *(6,12,6,3,15,3) \\
& =(17,1,10,3,16,12) .
\end{aligned}
$$

Clearly $\mathrm{x} *\left(\mathrm{y}^{*} \mathrm{z}\right) \neq(\mathrm{x} * \mathrm{y}) * \mathrm{z}$ for $\mathrm{x}, \mathrm{y}, \mathrm{z} \in \mathrm{V}$ so V is a non associative structure under ' ${ }^{*}$ '.

Now we proceed onto give examples of strong non associative column matrix semilinear algebra.

Example 2.55: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\vdots \\
\mathrm{~m}_{8}
\end{array}\right] \right\rvert\, \mathrm{m}_{\mathrm{i}} \in \mathrm{Z}_{17}, 1 \leq \mathrm{i} \leq 10, *,(3,7)\right\}
$$

be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{17}$.

$$
\begin{aligned}
\text { We see for } \mathrm{x} & =\left[\begin{array}{l}
0 \\
1 \\
2 \\
3 \\
4 \\
0 \\
0 \\
1
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{l}
1 \\
2 \\
0 \\
3 \\
1 \\
0 \\
1 \\
0
\end{array}\right] \text { in } \mathrm{V} \\
\mathrm{x} * \mathrm{y} & =\left[\begin{array}{c}
7 \\
0 \\
6 \\
13 \\
2 \\
0 \\
7 \\
3
\end{array}\right] \in \mathrm{V} .
\end{aligned}
$$

Example 2.56: Let

$$
\mathrm{V}=\left\{\left(\left.\left[\begin{array}{l}
x_{1} \\
x_{2} \\
x_{3} \\
x_{4}
\end{array}\right] \right\rvert\, x_{i} \in \mathrm{Z}_{3}, 1 \leq \mathrm{i} \leq 4, *,(2,1)\right\}\right.
$$

be a strong non associative semilinear algebra defined over the field $Z_{3}$.

$$
\begin{gathered}
\mathrm{x}=\left[\begin{array}{l}
1 \\
2 \\
0 \\
1
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{l}
0 \\
1 \\
2 \\
1
\end{array}\right] \in \mathrm{V} \\
\mathrm{x}^{*} \mathrm{y}=\left[\begin{array}{l}
2 \\
2 \\
2 \\
0
\end{array}\right] \in \mathrm{V}
\end{gathered}
$$

Clearly V is of finite order.
Example 2.57: Let

$$
V=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4} \\
a_{5} \\
a_{6}
\end{array}\right] \right\rvert\, a_{i} \in Z_{2}, 1 \leq i \leq 6, *,(1,0)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{S}=$ $\mathrm{Z}_{2}$.

Example 2.58: Let

$$
V=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in Z_{7}, 1 \leq i \leq 9, *,(3,5)\right\}
$$

be a strong non associative semilinear algebra of finite order.

$$
\begin{gathered}
\text { If } x=\left[\begin{array}{lll}
1 & 0 & 1 \\
0 & 1 & 1 \\
1 & 1 & 0
\end{array}\right] \text { and } y=\left[\begin{array}{lll}
1 & 1 & 1 \\
0 & 1 & 0 \\
1 & 0 & 1
\end{array}\right] \text { are in } V \text {, then } \\
x * y=\left[\begin{array}{lll}
1 & 5 & 1 \\
0 & 1 & 3 \\
1 & 3 & 5
\end{array}\right] \in \mathrm{V} .
\end{gathered}
$$

## Example 2.59: Let

$$
P=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15}
\end{array}\right] \right\rvert\, a_{i} \in Z_{13}, 1 \leq i \leq 15, *,(8,0)\right\}
$$

be a strong non associative semilinear algebra of finite order.

$$
\begin{aligned}
\text { For } \mathrm{p} & =\left[\begin{array}{lll}
8 & 2 & 1 \\
6 & 0 & 7 \\
0 & 7 & 0 \\
1 & 4 & 0 \\
0 & 0 & 1
\end{array}\right] \text { and } \mathrm{q}=\left[\begin{array}{lll}
1 & 0 & 3 \\
5 & 6 & 0 \\
2 & 0 & 1 \\
1 & 0 & 1 \\
8 & 7 & 6
\end{array}\right] \text { in } \mathrm{P}, \\
& \text { we see } \mathrm{p} * \mathrm{q}=\left[\begin{array}{ccc}
12 & 3 & 8 \\
9 & 0 & 4 \\
0 & 4 & 0 \\
8 & 6 & 0 \\
0 & 0 & 8
\end{array}\right] \in \mathrm{P}
\end{aligned}
$$

Example 2.60: Let

$$
\begin{gathered}
M=\left\{\begin{array}{c}
{\left.\left[\begin{array}{lllllll}
a_{1} & a_{2} & a_{3} & a_{10} & a_{11} & a_{12} & a_{13} \\
a_{4} & a_{5} & a_{6} & a_{14} & a_{15} & a_{16} & a_{17} \\
a_{7} & a_{8} & a_{9} & a_{18} & a_{19} & a_{20} & a_{21}
\end{array}\right] \right\rvert\, a_{i} \in Z_{7},} \\
1 \leq i \leq 21, *,(3,4)\}
\end{array}\right.
\end{gathered}
$$

be a strong non associative semilinear algebra of finite order over the field $\mathrm{Z}_{7}$.

Example 2.61: Let

$$
M=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{5} \\
a_{6} & a_{7} & \ldots & a_{10} \\
\vdots & \vdots & & \vdots \\
a_{21} & a_{22} & \ldots & a_{25}
\end{array}\right] \right\rvert\, a_{i} \in Z_{47}, 1 \leq i \leq 25, *,(3,10)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{47}$.

We have the following theorem.
THEOREM 2.3: Let $M$ be a strong matrix non associative semilinear algebra over the field $Z_{p}$ ( $p$ a prime). $M$ is quasi simple.

Proof: Obvious from the fact $\mathrm{Z}_{\mathrm{p}}$ is a prime field.
Now interested reader can find substructures and study them.

Now we give polynomial matrix coefficient strong non associative semilinear algebra over the finite field $\mathrm{Z}_{\mathrm{p}}$.

We give mainly examples of them and they are of infinite order.

## Example 2.62: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{7}, *,(3,0)\right\}
$$

be a strong non associative semilinear algebra of polynomials with coefficients from $\mathrm{Z}_{7}$. Clearly M is of infinite order.

Example 2.63: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Z_{11}, *,(10,3)\right\}
$$

be a strong non associative semilinear algebra of polynomials with coefficients from $\mathrm{Z}_{11}$ of infinite order over $\mathrm{Z}_{11}$.

## Example 2.64: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Z_{3}, *,(2,1)\right\}
$$

be a strong non associative semilinear algebra over the field $Z_{3}$.

## Example 2.65: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{29}, \text {, }^{(13,13)\}}\right.
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{29}$.

Example 2.66: Let

$$
\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{19}, *,(14,7)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{19}$ of infinite order.

Example 2.67: Let

$$
\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{t}_{1}, \mathrm{t}_{2}, \ldots, \mathrm{t}_{10}\right) ; \mathrm{t}_{\mathrm{j}} \in \mathrm{Z}_{11}, 1 \leq \mathrm{j} \leq 10, *,(3,7)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{11}$ of infinite order.

Example 2.68: Let

$$
\begin{gathered}
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(m_{1}, m_{2}, \ldots, m_{20}\right) ; m_{j} \in Z_{23},\right. \\
1 \leq j \leq 20, *,(3,11)\}
\end{gathered}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{23}$.
Example 2.69: Let

$$
S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(n_{1}, n_{2}, \ldots, n_{9}\right) ; n_{j} \in Z_{13}, 1 \leq j \leq 9, *,(9,4)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{13}$.
Example 2.70: Let

$$
\begin{equation*}
\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{m}_{\mathrm{l}}, \mathrm{~m}_{2}, \ldots, \mathrm{~m}_{8}\right) ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{17}, 1 \leq \mathrm{j} \leq 8, *,\right. \tag{3,0}
\end{equation*}
$$

be a strong non associative semilinear algebra of row matrix coefficient polynomial of infinite order over the finite field $\mathrm{Z}_{17}$.

## Example 2.71: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{p}_{1} \\
\mathrm{p}_{2} \\
\vdots \\
\mathrm{p}_{6}
\end{array}\right]\right. ; \mathrm{p}_{\mathrm{j}} \in \mathrm{Z}_{5}, 1 \leq \mathrm{j} \leq 6, *,(2,2)\right\}
$$

be a strong non associative semilinear algebra of column matrix coefficient polynomial semilinear algebra over the field $\mathrm{Z}_{5}$. M is commutative.

$$
\text { Consider } \mathrm{x}=\left[\begin{array}{l}
1 \\
0 \\
2 \\
3 \\
4 \\
3
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{l}
2 \\
4 \\
0 \\
1 \\
2 \\
1
\end{array}\right] \text { in } \mathrm{M} .
$$

$$
\mathrm{x} * \mathrm{y}=\left[\begin{array}{l}
1 \\
3 \\
4 \\
3 \\
2 \\
3
\end{array}\right] \text { and } \mathrm{y} * \mathrm{x}=\left[\begin{array}{l}
1 \\
3 \\
4 \\
3 \\
2 \\
3
\end{array}\right] .
$$

## Example 2.72: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{l}
x_{1} \\
x_{2} \\
x_{3} \\
x_{4}
\end{array}\right]\right. ; x_{j} \in Z_{13}, 1 \leq j \leq 4, *,(3,10)\right\}
$$

be a strong non associative column matrix coefficient semilinear algebra over the field $\mathrm{Z}_{13}$.

$$
\begin{aligned}
& \text { If } \mathrm{p}(\mathrm{x})=\left[\begin{array}{l}
1 \\
0 \\
2 \\
5
\end{array}\right]+\left[\begin{array}{l}
0 \\
3 \\
1 \\
2
\end{array}\right] \mathrm{x}+\left[\begin{array}{l}
1 \\
0 \\
7 \\
0
\end{array}\right] \mathrm{x}^{3} \\
& \text { and } \mathrm{q}(\mathrm{x})=\left[\begin{array}{l}
2 \\
1 \\
0 \\
7
\end{array}\right] \mathrm{x}+\left[\begin{array}{l}
1 \\
7 \\
8 \\
2
\end{array}\right] \mathrm{x}^{4} \text { are in M then } \\
& \mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})=\left[\begin{array}{l}
1 \\
0 \\
2 \\
5
\end{array}\right] *\left[\begin{array}{l}
2 \\
1 \\
0 \\
7

\end{aligned}
$$

Example 2.73: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ll}
d_{1} & d_{2} \\
d_{3} & d_{4}
\end{array}\right]\right. ; d_{i} \in Z_{3}, 1 \leq i \leq 4, *,(1,2)\right\}
$$

be a strong non associative semilinear algebra of matrix coefficient polynomials over the field $\mathrm{Z}_{3}$.

Example 2.74: Let

$$
\begin{gathered}
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{llll}
p_{1} & p_{2} & p_{3} & p_{4} \\
p_{5} & p_{6} & p_{7} & p_{8}
\end{array}\right]\right. ; p_{j} \in Z_{7},\right. \\
\left.1 \leq j \leq 8,{ }^{*},(0,4)\right\}
\end{gathered}
$$

be a strong non associative semilinear algebra of matrix coefficient polynomials over the field $\mathrm{Z}_{7}$.

$$
\left.\begin{array}{l}
\text { Consider } \mathrm{p}(\mathrm{x})=\left[\begin{array}{llll}
0 & 2 & 1 & 5 \\
6 & 0 & 2 & 0
\end{array}\right]+\left[\begin{array}{llll}
6 & 0 & 2 & 0 \\
0 & 4 & 0 & 1
\end{array}\right] \mathrm{x}^{3} \\
\text { and } \mathrm{q}(\mathrm{x})=\left[\begin{array}{llll}
2 & 1 & 1 & 1 \\
1 & 1 & 1 & 2
\end{array}\right] \mathrm{x}^{4}+\left[\begin{array}{llll}
1 & 2 & 3 & 4 \\
5 & 6 & 0 & 1
\end{array}\right] \mathrm{x}^{6} \text { in } P . \\
\text { Now } \mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})=\left[\begin{array}{llll}
0 & 2 & 1 & 5 \\
6 & 0 & 2 & 0
\end{array}\right] *\left[\begin{array}{llll}
2 & 1 & 1 & 1 \\
1 & 1 & 1 & 2
\end{array}\right] \mathrm{x}^{4} \\
+\left[\begin{array}{llll}
0 & 2 & 1 & 5 \\
6 & 0 & 2 & 0
\end{array}\right] *\left[\begin{array}{llll}
1 & 2 & 3 & 4 \\
5 & 6 & 0 & 1
\end{array}\right] \mathrm{x}^{6}+\left[\begin{array}{llll}
6 & 0 & 2 & 0 \\
0 & 4 & 0 & 1
\end{array}\right] * \\
{\left[\begin{array}{llll}
2 & 1 & 1 & 1 \\
1 & 1 & 1 & 2
\end{array}\right] \mathrm{x}^{7}+\left[\begin{array}{llll}
6 & 0 & 2 & 0 \\
0 & 4 & 0 & 1
\end{array}\right] *\left[\begin{array}{llll}
1 & 2 & 3 & 4 \\
5 & 6 & 0 & 1
\end{array}\right] \mathrm{x}^{9}} \\
\quad=\left[\begin{array}{lll}
1 & 4 & 4 \\
4 & 4 & 4 \\
4
\end{array}\right] \mathrm{x}^{4}+\left[\begin{array}{lll}
4 & 1 & 5 \\
6 & 2 & 0
\end{array} 4\right.
\end{array}\right] \mathrm{x}^{6} .
$$

This is the way the * operation is performed on $P$. Clearly $\mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x}) \neq \mathrm{q}(\mathrm{x}) * \mathrm{p}(\mathrm{x})$.

Example 2.75: Let

$$
\begin{gathered}
S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
t_{1} & t_{2} & t_{3} & t_{4} \\
t_{5} & t_{6} & t_{7} & t_{8} \\
t_{9} & t_{10} & t_{11} & t_{12} \\
t_{13} & t_{14} & t_{15} & t_{16}
\end{array}\right]\right. ; t_{j} \in Z_{23},\right. \\
1 \leq j \leq 16, *,(2,1)\}
\end{gathered}
$$

be a strong non associative semilinear algebra of matrix coefficient polynomial over the field $\mathrm{Z}_{23}$.

## Consider

$$
\begin{aligned}
& \mathrm{p}(\mathrm{x})= {\left[\begin{array}{llll}
0 & 1 & 2 & 3 \\
1 & 2 & 0 & 3 \\
2 & 0 & 3 & 1 \\
3 & 1 & 2 & 0
\end{array}\right] \mathrm{x}+\left[\begin{array}{llll}
1 & 1 & 1 & 1 \\
0 & 2 & 0 & 2 \\

5 & 0 & 7 & 2 \\
11 & 3 & 4 & 2
\end{array}\right] x^{5}+\left[\begin{array}{llll}
3 & 4 & 2 & 3 \\
0 & 5 & 4 & 7 \\
7 & 0 & 7 & 0 \\
7 & 9 & 2 & 10
\end{array}\right] \mathrm{x}^{6} \\
\quad+\left[\begin{array}{cccc}
7 & 10 & 0 & 11 \\
2 & 1 & 10 & 7 \\
13 & 0 & 1 & 2 \\
5 & 3 & 4 & 2
\end{array}\right] \mathrm{x}^{9} \in \mathrm{~S}
\end{gathered}
$$

Study of special identities are properties about strong non associative semilinear algebras defined over a field of characteristic p are given as theorems. For proof refer [ ].

## THEOREM 2.4: Let

$$
V=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in z_{p},(t, t), *\right\}
$$

be a strong polynomial non associative semilinear algebra over the field $Z_{p}$. $V$ is a $P$-semilinear algebra ( $A$ semilinear algebra is said to be a $P$-semilinear algebra if $p(x) *(q(x) * p(x))=$ $(p(x) * q(x)) * p(x)$ for all $p(x), q(x) \in V)$.

Proof is direct hence left as an exercise to the reader.
Example 2.76: Let

$$
\left.\left.\mathbf{M}=\left\{\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & \mathrm{a}_{9} \\
\mathrm{a}_{10} & \mathrm{a}_{11} & \ldots & \mathrm{a}_{18} \\
\vdots & \vdots & & \vdots \\
\mathrm{a}_{82} & \mathrm{a}_{83} & \ldots & a_{90}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{7}, 1 \leq \mathrm{i} \leq 90, *,(3,3)\right\}
$$

be a strong non associative P-semilinear algebra over the field $\mathrm{Z}_{7}$.

Example 2.77: Let $\mathrm{T}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{40}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{41}, 1 \leq \mathrm{i} \leq 40\right.$, *, $(19,19)\}$ be a strong non associative P -semilinear algebra over the field $\mathrm{Z}_{41}$.

Example 2.78: Let

$$
\mathrm{T}=\left\{\left.\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
a_{20}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{23}, 1 \leq \mathrm{i} \leq 23, *,(10,10)\right\}
$$

be a strong non associative P-semilinear algebra over the field $\mathrm{Z}_{23}$.

Example 2.79: Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & a_{3} & a_{4} \\
\mathrm{a}_{5} & a_{6} & a_{7} & a_{8} \\
\mathrm{a}_{9} & a_{10} & a_{11} & a_{12} \\
\mathrm{a}_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Z}_{73}, 1 \leq \mathrm{i} \leq 16, *,(24,24)\right\}
$$

be a strong non associative P-semilinear algebra over the field $\mathrm{Z}_{73}$.

A semilinear algebra V is an alternative semilinear algebra if for all $\mathrm{x}, \mathrm{y} \in \mathrm{V}$;

$$
(x * y) * y=x *(y * y)
$$

In view of this definition we give a few examples.

Example 2.80: Let

$$
V=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in Z_{29}, 1 \leq i \leq 9, *,(9,9)\right\}
$$

be a strong non associative semilinear algebra over the field $\mathrm{Z}_{29}$ which is not alternative.

THEOREM 2.5: Let $V=\left\{a_{i} \in Z_{p},{ }^{*},(t, t)\right\}$ be a strong non associative semilinear algebra defined over a field $Z_{p} . \quad V$ is never an alternative semilinear algebra.

For we see for any $\mathrm{x}, \mathrm{y} \in \mathrm{V}$.

$$
\begin{array}{ll}
(x * y) * y=(t x+t y) * y=t^{2} x+t^{2} y+t y & I \\
\text { and } x *(y * y)=x *(t y+t y)=t x+t^{2} y+t^{2} y & I I
\end{array}
$$

I and II are not equal for equality forces $t^{2}=t(\bmod p)$ which is impossible in $\mathrm{Z}_{\mathrm{p}}$.

Next we proceed onto define the notion of Smarandache non associative semilinear algebras which are defined over a Smarandache ring.

DEFINITION 2.5: Let $V$ be a groupoid. $S$ be a Smarandache ring. If $V$ is a non associative semilinear algebra over the $S$ ring $S$ we call $V$ a Smarandache non associative semilinear algebra over the $S$-ring.

We will illustrate this situation by some examples.
Example 2.81: Let $\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{6},{ }^{*},(3,5)\right\}$ be a $S$-non associative semilinear algebra over the S -ring $\mathrm{Z}_{6}$ (For in the ring $\mathrm{Z}_{6}, \mathrm{~T}=\{0,3\} \subseteq \mathrm{Z}_{6}$ is a field.

## Example 2.82: Let

$V=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}\right) \mid a_{i} \in Z_{10}, *,(3,7), 1 \leq i \leq 4\right\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{10}$. $\left(\mathrm{Z}_{10}\right.$ is a S ring as $\{0,5\} \subseteq \mathrm{Z}_{10}$ is a field).

Example 2.83: Let $\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}, \mathrm{a}_{5}, \mathrm{a}_{6}, \mathrm{a}_{7}, \ldots, \mathrm{a}_{12}\right) \mid \mathrm{a}_{\mathrm{i}} \in\right.$ $\left.\mathrm{Z}_{38},{ }^{*},(0,20), 1 \leq \mathrm{i} \leq 12\right\}$ be a Smarandache strong non associative semilinear algebra over the S -ring $\mathrm{Z}_{38}$.

In view of all these examples we have the following theorem.

THEOREM 2.56: Let $Z_{2 n}$ be the ring of modulo integers, $Z_{2 n}$ is a $S$-ring (Here $n$ is a prime).

Proof: Consider $\{0, \mathrm{n}\}=\mathrm{A} \subseteq \mathrm{Z}_{2 \mathrm{n}}$ we see $\mathrm{n}+\mathrm{n} \equiv 2 \mathrm{n}=0(\bmod$ 2 n ).

Thus $\{0, \mathrm{n}\}=\mathrm{A}$ is a field isomorphic to $\mathrm{Z}_{2}=\{0,1\}$. Hence the claim.

## THEOREM 2.7: Let

$V=\left\{\left(a_{1}, \ldots, a_{m}\right) \mid a_{i} \in Z_{2 n}(n\right.$ a prime $\left.),{ }^{*},(t, u) ; t, u \in Z_{2 n}\right\}$
be a groupoid. $V$ is a $S$-non associative semilinear algebra over the $S$-ring $Z_{2 n}$.

This proof is also direct and hence is left as an exercise to the reader.

We can also have the Smarandache non associative column matrix semilinear algebras defined over S-rings.

We give examples of this situation.

## Example 2.84: Let

$$
M=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{10}
\end{array}\right] \right\rvert\, a_{i} \in Z_{14}, 1 \leq i \leq 10, *,(3,7)\right\}
$$

be a Smarandache non associative column matrix semilinear algebra over the $S$-ring $Z_{14}$.

Example 2.85: Let

$$
M=\left\{\left.\left[\begin{array}{l}
x_{1} \\
x_{2} \\
x_{3} \\
x_{4} \\
x_{5} \\
x_{6}
\end{array}\right] \right\rvert\, x_{\left.x_{i} \in Z_{22}, *,(10,9), 1 \leq i \leq 6\right\}}\right.
$$

be a Smarandache non associative column matrix semilinear algebra over the S -ring $\mathrm{Z}_{22}$.

Example 2.86: Let

$$
\left.P=\left\{\begin{array}{c}
t_{1} \\
t_{2} \\
\vdots \\
t_{20}
\end{array}\right] \right\rvert\, t_{\left.t_{i} \in Z_{86}, 1 \leq i \leq 20, *,(2,70)\right\}}
$$

be a Smarandache non associative column matrix semilinear algebra over the S-ring $\mathrm{Z}_{86}$.

## Example 2.87: Let

$$
T=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4} \\
a_{5} \\
a_{6} \\
a_{7}
\end{array}\right] \right\rvert\, a_{i} \in Z_{94}, *,(0,8), 1 \leq i \leq 7\right\}
$$

be a Smarandache non associative column matrix semilinear algebra over the S-ring $\mathrm{Z}_{94}$.

Example 2.88: Let

$$
\mathrm{M}=\left\{\left.\left[\begin{array}{l}
\mathrm{a} \\
\mathrm{~b} \\
\mathrm{c}
\end{array}\right] \right\rvert\, \mathrm{a}, \mathrm{~b}, \mathrm{c} \in \mathrm{Z}_{6}, *,(2,2)\right\}
$$

be a Smarandache non associative column matrix semilinear algebra over the S -ring $\mathrm{Z}_{6}$. M is a commutative structure.

Now we proceed onto give examples Smarandache non associative matrix semilinear algebras over a S-ring.

Example 2.89: Let
is a Smarandache non associative matrix semilinear algebra over the S-ring $\mathrm{Z}_{15}$.

Example 2.90: Let

$$
V=\left\{\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in Z_{21}, 1 \leq i \leq 12, *,(3,3)\right\}
$$

be a Smarandache non associative matrix semilinear algebra over the S -ring $\mathrm{Z}_{15}$. V is commutative.

Example 2.91: Let

$$
\left.\left.M=\left\{\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{i} \in Z_{33}, 1 \leq i \leq 16, *,(0,10)\right\}
$$

be a Smarandache non associative matrix semilinear algebra over the S -ring $\mathrm{Z}_{33}$.

Example 2.92: Let

$$
\mathrm{T}=\left\{\left.\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\,{ }_{\left.a_{i} \in Z_{57}, 1 \leq i \leq 9, *,(2,2)\right\}}\right.
$$

be a Smarandache non associative matrix semilinear algebra over the S -ring $\mathrm{Z}_{57}$.

Now we can define on similar line Smarandache non associative polynomial semilinear algebra and Smarandache non associative matrix polynomial coefficient semilinear algebra defined over the S-ring.

These are illustrated by some examples.

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{15}, *,(3,2)\right\}
$$

be a Smarandache non associative polynomial semilinear algebra over the S -ring $\mathrm{Z}_{15}$.

$$
\begin{aligned}
& \text { If } \mathrm{p}(\mathrm{x})=7+8 \mathrm{x}^{3}+9 \mathrm{x}^{2}+10 \mathrm{x}^{4} \text { and } \\
& \mathrm{q}(\mathrm{x})=6+2 \mathrm{x}+4 \mathrm{x}^{2}+10 \mathrm{x}^{5} \text { are in } \mathrm{M} \text { then } \\
& \mathrm{p}(\mathrm{x}) * \mathrm{q}(\mathrm{x})=\left(7+8 \mathrm{x}^{3}+9 \mathrm{x}^{2}+10 \mathrm{x}^{4}\right) *\left(7+8 \mathrm{x}^{3}+9 \mathrm{x}^{2}+10 \mathrm{x}^{4}\right) \\
& =\quad 7 * 6+8 * 6 \mathrm{x}^{3}+9 * 6 \mathrm{x}^{2}+10 * 6 \mathrm{x}^{4}+7 * 2 \mathrm{x}+8 * 2 \mathrm{x}^{4}+ \\
& 9 * 2 \mathrm{x}^{3}+10 * 2 \mathrm{x}^{5}+7 * 4 \mathrm{x}^{2}+8 * 4 \mathrm{x}^{5}+8 * 4 \mathrm{x}^{5}+9 * \\
& \quad 4 \mathrm{x}^{4}+10 * 4 \mathrm{x}^{6}+7 * 10 \mathrm{x}^{5}+8 * 10 \mathrm{x}^{8}+9 * 10 \mathrm{x}^{7}+10 \mathrm{x}^{9} . \\
& =3+6 \mathrm{x}^{3}+9 \mathrm{x}^{2}+12 \mathrm{x}^{4}+10 \mathrm{x}+13 \mathrm{x}^{4}+\mathrm{x}^{3}+4 \mathrm{x}^{5}+14 \mathrm{x}^{2}+ \\
& 2 \mathrm{x}^{5}+5 \mathrm{x}^{4}+8 \mathrm{x}^{6}+11 \mathrm{x}^{5}+14 \mathrm{x}^{8}+17 \mathrm{x}^{7}+5 \mathrm{x}^{9} \\
& =3+10 \mathrm{x}+8 \mathrm{x}^{2}+7 \mathrm{x}^{3}+2 \mathrm{x}^{5}+8 \mathrm{x}^{6}+17 \mathrm{x}^{7}+14 \mathrm{x}^{8}+5 \mathrm{x}^{9} \in \mathrm{M} .
\end{aligned}
$$

This is the way ' $*$ ' operation is performed on M.
Example 2.94: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{10}, *,(2,2), 0 \leq \mathrm{i} \leq \infty\right\}
$$

be a Smarandache non associative semilinear algebra over the S-ring $\mathrm{Z}_{10}$.

Clearly V is a commutative semilinear algebra.

Example 2.95: Let

$$
\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{33}, *,(8,0)\right\}
$$

be a Smarandache non associative semilinear algebra over the S-ring $\mathrm{Z}_{33}$. M is a non commutative structure.

Example 2.96: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a i=\left(x_{1}, x_{2}, x_{3}, x_{4}\right) ; x_{j} \in Z_{15}, *,(5,3), 1 \leq j \leq 4\right\}
$$

be a Smarandache non associative semilinear algebra of row matrix coefficient polynomials over the S -ring $\mathrm{Z}_{15}$.

Example 2.97: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(y_{1}, y_{2}, \ldots, y_{15}\right) ; y_{j} \in Z_{10}, *,(2,2), 1 \leq j \leq 15\right\}
$$

be a Smarandache non associative semilinear algebra of matrix coefficient polynomials over the S -ring $\mathrm{Z}_{10}, \mathrm{P}$ is a commutative structure.

Example 2.98: Let

$$
S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(t_{1}, t_{2}, t_{3}\right) ; t_{j} \in Z_{38}, *,(0,19), 1 \leq j \leq 3\right\}
$$

be a Smarandache non associative semilinear algebra over $Z_{38}$.

## Example 2.99: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{d}_{1} \\
\mathrm{~d}_{2} \\
\vdots \\
\mathrm{~d}_{20}
\end{array}\right]\right. ; \mathrm{d}_{\mathrm{j}} \in \mathrm{Z}_{34}, *,(3,7), 1 \leq \mathrm{j} \leq 20\right\}
$$

be a Smarandache non associative semilinear algebra of column matrix coefficient polynomial over a S-ring $Z_{34}$.

Example 2.100: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\vdots \\
\mathrm{~m}_{10}
\end{array}\right]\right., \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{6}, *,(2,2), 1 \leq \mathrm{j} \leq 10\right\}
$$

be a Smarandache non associative column matrix coefficient polynomial semilinear algebra over S-ring $\mathrm{Z}_{6}$.

Example 2.101: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{l}
d_{1} \\
d_{2} \\
d_{3} \\
d_{4}
\end{array}\right]\right., d_{j} \in Z_{14}, *,(6,7), 1 \leq j \leq 4\right\}
$$

be a Smarandache non associative column matrix coefficient polynomial semilinear algebra over S-ring $\mathrm{Z}_{14}$.

Example 2.102: Let

$$
\begin{gathered}
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{llll}
d_{1} & d_{2} & \ldots & d_{10} \\
d_{11} & d_{12} & \ldots & d_{20} \\
d_{21} & d_{22} & \ldots & d_{30}
\end{array}\right]\right., d_{j} \in Z_{15}, *,(3,7),\right. \\
1 \leq j \leq 30\}
\end{gathered}
$$

be a Smarandache non associative matrix coefficient polynomial semilinear algebra over S-ring $\mathrm{Z}_{15}$.

Example 2.103: Let

$$
\begin{gathered}
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
d_{1} & d_{2} & \ldots & d_{18} \\
d_{19} & d_{20} & \ldots & d_{36}
\end{array}\right]\right., d_{j} \in Z_{6}, *,(5,5),\right. \\
1 \leq j \leq 36\}
\end{gathered}
$$

be a Smarandache non associative matrix coefficient polynomial semilinear algebra over S-ring $\mathrm{Z}_{6}$.

Example 2.104: Let
$M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{lll}d_{1} & d_{2} & d_{3} \\ d_{4} & d_{5} & d_{6} \\ d_{7} & d_{8} & d_{9}\end{array}\right]\right., d_{j} \in Z_{21}, *,(3,0), 1 \leq j \leq 9\right\}$
be a Smarandache non associative matrix coefficient polynomial semilinear algebra over S -ring $\mathrm{Z}_{21}$.

Now we proceed onto define doubly Smarandache non associative semilinear algebra and give examples of them.

DEFINITION 2.6: Let $M=\left\{a_{i} \mid a_{i} \in Z_{n}\right.$, , $\left.(t, u)\right\}$ be $a$ Smarandache groupoid. If $M$ is a Smarandache non associative semilinear algebra over the $S$-ring $Z_{n}$ then we define $M$ to be a
double Smarandache non associative semilinear algebra (DS non associative semilinear algebra) over the $S$-ring $Z_{n}$.

We give examples of them.
Example 2.105: Let $\mathrm{V}=\left\{\mathrm{Z}_{19},{ }^{*}\right.$, $\left.(0,5)\right\}$ be a double Smarandahe non associative semilinear algebra over the S-ring $Z_{10}$.

Example 2.106: Let $\mathrm{G}=\left\{\mathrm{Z}_{6},{ }^{*},(4,5)\right\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{6}$. Clearly G is a double Smarandache non associative semilinear algebra over the S-ring $\mathrm{Z}_{6}$.

Example 2.107: Let $G=\left\{Z_{12}, *,(4,3)\right\}$ be a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.

Example 2.108: Let $G=\left\{Z_{14},{ }^{*},(7,8)\right\}$ be a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{14}$.

Example 2.109: Let

$$
P=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}\right) \mid a_{i} \in Z_{12}, *(3,4), *, 1 \leq i \leq 4\right\}
$$

be a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.

## Example 2.110: Let

$\mathrm{R}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{10}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{14}, *,(7,8),{ }^{*}, 1 \leq \mathrm{i} \leq 10\right\}$
be a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{14}$.

## Example 2.111: Let

$$
V=\left\{\left(a_{1}, a_{2},, \ldots, a_{40}\right) \mid a_{i} \in Z_{46}, *,(1,2), *, 1 \leq i \leq 40\right\}
$$

be a DS non associative semilinear algebra over the S-ring $\mathrm{Z}_{46}$.
THEOREM 2.8: Let $V=\left\{\left(a_{1}, \ldots, a_{r}\right) \mid a_{i} \in Z_{n}, l \leq i \leq r,(t, u)\right.$, * $\}$ be a Smarandache non associative semilinear algebra over the $S$-ring $Z_{n}$; V is a DS non associative semilinear algebra over the $S$-ring $Z_{n}$ if $(t, u)=1$ and $t \neq u ; t+u \equiv 1(\bmod n)$.

Theorem 2.9: Let $Z_{n}$ be a $S$-ring, $P=\left\{\left(a_{l}, \ldots, a_{r}\right) \mid a_{i} \in Z_{n}, *, t+u \equiv(\bmod n)(t, u)\right\}$
be a DS non associative semilinear algebra over the $S$-ring $Z_{n}$. $P$ is a DS non associative strong Bol semilinear algebra if and only if $t^{3}=t(\bmod n)$ and $u^{2}=u(\bmod n)$.

Proof: We just recall a non assocative semilinear algebra P is strong Bol semilinear if for all $x, y, z \in V$
$\left(\left(x^{*} \mathrm{y}(* \mathrm{z}) * \mathrm{x}=\mathrm{x} *\left(\left(\mathrm{y}{ }^{*} \mathrm{z}\right) * \mathrm{x}\right)\right.\right.$.
Let $\mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right), \mathrm{y}=\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)$ and $\mathrm{z}=\left(\mathrm{z}_{1}, \mathrm{z}_{2}, \ldots\right.$, $\left.z_{r}\right) \in P$.

$$
\begin{aligned}
&\left(\left(\mathrm{x}^{*} \mathrm{y}\right) * \mathrm{z}\right) * \mathrm{x} \\
&= {[(\mathrm{tx}+\mathrm{uy}) * \mathrm{z}] * \mathrm{x} } \\
&=\left(\mathrm{t}^{2} \mathrm{x}+\mathrm{tuy}+\mathrm{uz}\right) * \mathrm{x} \\
&= \mathrm{t}^{3} \mathrm{x}+\mathrm{t}^{2} \mathrm{uy}+\mathrm{tuz}+\mathrm{ux} \\
&=\left(\mathrm{t}^{3} \mathrm{x}_{1}+\mathrm{t}^{2} \mathrm{uy}_{1}+\mathrm{tuz}_{1}+\mathrm{ux}_{1}, \mathrm{t}^{3} \mathrm{x}_{2}+\mathrm{t}^{2} \mathrm{uy}_{2}+\mathrm{tuz}_{2}+\mathrm{ux}_{2}, \ldots, \mathrm{t}^{3} \mathrm{x}_{\mathrm{r}}\right. \\
&\left.+\mathrm{t}^{2} \mathrm{uy}_{\mathrm{r}}+\mathrm{tuz}_{\mathrm{r}}+\mathrm{ux}_{\mathrm{r}}\right)
\end{aligned}
$$

Now consider $\mathrm{x} *\left((\mathrm{y} * \mathrm{z})^{*} \mathrm{x}\right)$

$$
\begin{aligned}
= & x *\left(t^{2} y+t u z+u x\right) \\
= & t x+t_{2} u y+t u_{2} z+u_{2} x \\
= & \left(\mathrm{tx}_{1}+t^{2} u y_{1}+\mathrm{tu}^{2} z_{1}+u^{2} x_{1}, \mathrm{tx}_{2}+t^{2} u y_{2}+\text { tu }^{2} z_{2}+u^{2} x_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}\right. \\
& \left.+\mathrm{t}^{2} \mathrm{uy}_{\mathrm{r}}+\mathrm{tu}^{2} z_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{x}_{\mathrm{r}}\right)
\end{aligned}
$$

$\mathrm{I}=\mathrm{II}$ if and only if $\mathrm{t}^{3}=\mathrm{t}(\bmod \mathrm{n})$ and $\mathrm{u}^{2}=\mathrm{u}(\bmod \mathrm{n})$; hence the claim.

THEOREM 2.10: Let $Z_{n}$ be a $S$-ring.
$V=\left\{\left(a_{1}, a_{2}, \ldots, a_{r}\right) \mid a_{i} \in Z_{n} ; l \leq i \leq r,(t, u) ; t+u \equiv 1(\bmod n)\right\}$ is a DS strong non associative Moufang semilinear algebra if and only if $t^{2}=t(\bmod n)$ and $u^{2}=u(\bmod n)$.

Proof: We say a DS non associative semilinear algebra is strong Moufang if

$$
(\mathrm{x} * \mathrm{y}) *(\mathrm{z} * \mathrm{x})=(\mathrm{x} *(\mathrm{y} * \mathrm{z})) * \mathrm{x} \text { for all } \mathrm{x}, \mathrm{y} \in \mathrm{~V}
$$

Let $\mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right), \mathrm{y}=\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)$ and $\mathrm{z}=\left(\mathrm{z}_{1}, \mathrm{z}_{2}, \ldots\right.$, $\left.\mathrm{Z}_{\mathrm{r}}\right) \in \mathrm{V}$.

Consider $(\mathrm{x} * \mathrm{y}) *\left(\mathrm{z}^{*} \mathrm{x}\right)$

$$
\begin{aligned}
= & {\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)\right] *\left[\left(\mathrm{z}_{1}, \mathrm{z}_{2}, \ldots, \mathrm{z}_{\mathrm{r}}\right) *\right.} \\
& \left.\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right)\right] \\
= & \left(\mathrm{tx}_{1}+\mathrm{uy}_{1}, \mathrm{tx}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{uy} \mathrm{y}_{\mathrm{r}}\right) *\left(\mathrm{tz}_{1}+\mathrm{ux}_{1}, \mathrm{tz}_{2}+\mathrm{ux}_{2},\right. \\
& \left.\ldots, \mathrm{tz}_{\mathrm{r}}+\mathrm{ux}_{\mathrm{r}}\right) \\
= & \left(\mathrm{t}^{2} \mathrm{x}_{1}+\mathrm{uty}_{1}+\mathrm{tuz}_{1}+\mathrm{u}^{2} \mathrm{x}_{1}, \mathrm{t}^{2} \mathrm{x}_{2}+\mathrm{uty}_{2}+\mathrm{utz}_{1}+\mathrm{u}^{2} \mathrm{x}_{2}, \ldots,\right. \\
& \left.\mathrm{t}^{2} \mathrm{x}_{\mathrm{r}}+\mathrm{tuy}_{\mathrm{r}}+\mathrm{ut} z_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{xr}\right)
\end{aligned}
$$

Consider ( $\left.\mathrm{x} *\left(\mathrm{y}^{*} \mathrm{z}\right)\right) * \mathrm{x}$

$$
\begin{aligned}
& =\left(\mathrm{x}^{*}\left(\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) *\left(\mathrm{z}_{1}, \mathrm{z}_{2}, \ldots, \mathrm{z}_{\mathrm{r}}\right)\right)\right) * \mathrm{x} \\
& =\left(\mathrm{x} *\left(\mathrm{ty}_{1}+\mathrm{uz}_{1}, \mathrm{ty}_{2}+\mathrm{z}_{2} \mathrm{u}, \ldots, \mathrm{ty}_{\mathrm{r}}+\mathrm{uz}_{\mathrm{r}}\right)\right) * \mathrm{x} \\
& =\left(\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{ty}_{1}+\mathrm{uz}_{1}, \mathrm{ty}_{2}+\mathrm{uz}_{2}, \ldots, \mathrm{ty}_{\mathrm{r}}+\mathrm{uz}_{\mathrm{r}}\right)\right) * \mathrm{x} \\
& =\left(\mathrm{tx}_{1}+\mathrm{uty}_{1}+\mathrm{u}^{2} \mathrm{z}_{1}, \mathrm{tx}_{2}+\mathrm{uty}_{2}+\mathrm{u}^{2} \mathrm{z}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{tuy}_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{z}_{\mathrm{r}}\right) \\
& \quad *\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) \\
& =\left(\mathrm{t}^{2} \mathrm{x}_{1}+\mathrm{ut}^{2} \mathrm{y}_{1}+\mathrm{u}^{2} \mathrm{tz}_{1}+\mathrm{ux}_{1}, \mathrm{t}^{2} \mathrm{x}_{2}+\mathrm{ut}^{2} \mathrm{y}_{2}+\mathrm{tu}^{2} \mathrm{z}_{2}+\mathrm{ux}_{2}, \ldots,\right. \\
& \left.\mathrm{t}^{2} \mathrm{x}_{\mathrm{r}}+\mathrm{ut}^{2} \mathrm{y}_{\mathrm{r}}+\mathrm{t}^{2} \mathrm{uz}_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{x}_{\mathrm{r}}\right)
\end{aligned}
$$

I and II are equal if and only if $\mathrm{t}^{2} \equiv \mathrm{t}(\bmod \mathrm{n})$. Thus V is a DS strong non associative strong Moufang semilinear algebra if and only if $\mathrm{t}^{2} \equiv \mathrm{t}(\bmod \mathrm{n})$ and $\mathrm{u}^{2} \equiv \mathrm{u}(\bmod \mathrm{n})$.

## THEOREM 2.11: Let $Z_{n}$ be a $S$-ring

$V=\left\{\left(a_{1}, a_{2}, \ldots, a_{r}\right) \mid a_{i} \in Z_{n}, l \leq i \leq r,(t, u), t+u \equiv 1(\bmod n)\right.$, *) be a DS non associative semilinear algebra over the $S$-ring $Z_{n} . V$ is an alternative $D S$ non associative semilinear algebra if and only if $t^{2} \equiv t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.

Proof: Recall a DS non associative semilinear algebra V is alternative if $(x * y) * y=x *(y * y)$ and $(x * y) * y=x *(x * y)$ for all $\mathrm{x}, \mathrm{y} \in \mathrm{V}$.

$$
\begin{aligned}
& \text { Let } x=\left(x_{1}, x_{2}, \ldots, x_{r}\right) \text { and } y=\left(y_{1}, y_{2}, \ldots, y_{r}\right) \in V . \\
& (x * y) * y=\left[\left(x_{1}, x_{2}, \ldots, x_{r}\right) *\left(y_{1}, y_{2}, \ldots, y_{r}\right)\right] * y \\
& =\left(x_{1} * y_{1}, x_{2} * y_{2}, \ldots, x_{r} * y_{r}\right) *\left(y_{1}, y_{2}, \ldots, y_{r}\right) \\
& =\left(\mathrm{tx}_{1}+u y_{1}, t x_{2}+u y_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+u y_{r}\right) *\left(y_{1}, y_{2}, \ldots, y_{r}\right) \\
& \left.=\mathrm{t}^{2} x_{1}+\operatorname{tuy}_{1}+u y_{1}, t^{2} x_{2}+\operatorname{tuy}_{2}+u y_{2}, \ldots, t^{2} x_{r}+\text { tuy }_{\mathrm{r}}+u y_{r}\right)
\end{aligned}
$$

Consider $\mathrm{x} *(\mathrm{y} * \mathrm{y})=$

$$
\begin{aligned}
& \mathrm{x}\left(\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)\right) \\
& =\mathrm{x} *\left(\mathrm{ty}_{1}+\mathrm{uy}_{1}, \mathrm{ty}_{2}+\mathrm{uy}_{2}, \ldots, t \mathrm{t}_{\mathrm{r}}+u y_{\mathrm{r}}\right) \\
& =\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right)\left(\mathrm{ty}_{1}+\mathrm{uy}_{1}, t \mathrm{ty}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{ty}_{\mathrm{r}}+u y_{\mathrm{r}}\right) \\
& =\left(\mathrm{tx}_{1}+\mathrm{uty}_{1}+\mathrm{u}^{2} \mathrm{y}_{1}, \mathrm{tx}_{2}+\mathrm{tuy}_{2}+\mathrm{u}^{2} \mathrm{y}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{tuy}_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{y}_{\mathrm{r}}\right)
\end{aligned}
$$

I and II are equal if and only if $u^{2}=u(\bmod n)$ and $\mathrm{t}^{2}=\mathrm{t}(\bmod \mathrm{n})$.
$\operatorname{Consider}\left(\mathrm{x}^{*} \mathrm{x}\right) * \mathrm{y}=\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right)\right] *\left(\mathrm{y}_{1}\right.$, $y_{2}, \ldots, y_{r}$ )

$$
\begin{align*}
& =\left(\mathrm{tx}_{1}+\mathrm{ux}_{1}, \mathrm{tx}_{2}+\mathrm{ux}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{ux}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) \\
& \left.\mathrm{t}^{2} \mathrm{x}_{1}+\mathrm{tux}_{1}+\mathrm{uy}_{1}, \mathrm{t}^{2} \mathrm{x}_{2}+\mathrm{tux}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{t}^{2} \mathrm{x}_{\mathrm{r}}+\mathrm{tux}_{\mathrm{r}}+\mathrm{uy}_{\mathrm{r}}\right) \tag{a}
\end{align*}
$$

$\operatorname{Now} \mathrm{x} *(\mathrm{x} * \mathrm{y})=\mathrm{x} *\left(\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)\right.$

$$
\begin{align*}
& =x_{*}^{*}\left(\text { tx }_{1}+u y_{1}, \text { tx }_{2}+u y_{2}, \ldots, \text { tx }_{\mathrm{r}}+u y_{r}\right) \\
& =\left(\text { tx }_{1}+\text { tux }_{1}+u^{2} y_{1}, \text { tx }_{2}+\text { tux }_{2}+u^{2} y_{2}, \ldots, \text { tx }_{r}+\text { tux }_{r}+u^{2} y_{r}\right) \tag{b}
\end{align*}
$$

a and b are equal if and only if $\mathrm{t}^{2}=\mathrm{t}(\bmod \mathrm{n})$ and $\mathrm{u}^{2}=\mathrm{u}$ $(\bmod \mathrm{n})$. Thus V is a alternative DS non associative semilinear algebra if and only if $\mathrm{t}^{2}=\mathrm{t}(\bmod \mathrm{n})$ and $\mathrm{u}^{2}=\mathrm{u}(\bmod \mathrm{n})$.

THEOREM 2.12: Let $Z_{n}$ be a $S$-ring

$$
V=\left\{\left(a_{1}, a_{2}, \ldots, a_{r}\right) \mid a_{i} \in Z_{n}, l \leq i \leq r ;(t, u), *\right\}
$$

be a $D S$ non associative semilinear algebra over the $S$-ring $Z_{n}$. If $t+u \equiv 1(\bmod n)$ then $V$ is an idempotent DS non associative semilinear algebra over the $S$-ring $Z_{n}$.

Proof: To prove V is an idempotent DS non associative semilinear algebra we have to show if $t+u \equiv 1(\bmod n)$ then for every $\mathrm{x} \in \mathrm{V}, \mathrm{x} * \mathrm{x}=\mathrm{x}$.

$$
\begin{aligned}
& \text { Consider } x_{1}\left(x_{1}, x_{2}, \ldots, x_{r}\right) \in V \\
& x^{*} \mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, x_{r}\right) *\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) \\
& =\left(\mathrm{tx}_{1}+\mathrm{ux}_{1}, \mathrm{tx}_{2}+\mathrm{ux}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{ux}_{\mathrm{r}}\right) \\
& =\left((\mathrm{t}+\mathrm{u}) \mathrm{x}_{1},(\mathrm{t}+\mathrm{u}) \mathrm{x}_{2}, \ldots,(\mathrm{t}+\mathrm{u}) \mathrm{x}_{\mathrm{r}}\right) \\
& \text { (if }(\mathrm{t}+\mathrm{u}) \equiv 1 \bmod \mathrm{n}) \\
& =\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) . \text { Hence the claim. }
\end{aligned}
$$

## THEOREM 2.13: Let $Z_{n}$ be a $S$-ring.

 $V=\left\{\left(x_{1}, x_{2}, \ldots, x_{r}\right) \mid x_{i} \in Z_{n}, l \leq i \leq r,(t, u), t+u \equiv 1(\bmod n)\right.$, * $\}$ be a DS non associative semilinear algebra over the $S$-ring $Z_{n}$. $V$ is a $P$-DS non associative semilinear algebra if and only if $t^{2}$ $\equiv t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.Proof: To show V is a P-DS non associative semilinear algebra over $Z_{n}$ it is enough if we show $(x * y) * y=x *(y * y)$ for all $x$, $y \in V$.

$$
\begin{aligned}
& \text { Consider } \mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) \text { and } \mathrm{y}=\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) \in \mathrm{V} . \\
& (\mathrm{x} * \mathrm{y}) * \mathrm{y}=\left(\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) \\
& =\left(\mathrm{tx}_{1}+\mathrm{uy}_{1}, \mathrm{tx}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{uy}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) \\
& =\left(\mathrm{t}^{2} \mathrm{x}_{1}+\mathrm{tuy}_{1}+\mathrm{uy}_{1}, \mathrm{t}^{2} \mathrm{x}_{2}+\operatorname{tuy}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{t}^{2} \mathrm{x}_{\mathrm{r}}+\mathrm{tuy}_{\mathrm{r}}+\mathrm{uy}_{\mathrm{r}}\right)
\end{aligned}
$$

Consider $\mathrm{x} *(\mathrm{y} * \mathrm{y})=$

$$
\left.\mathrm{x}^{*}\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right) *\left(\mathrm{y}_{1}, \mathrm{y}_{2}, \ldots, \mathrm{y}_{\mathrm{r}}\right)\right)
$$

$$
\begin{aligned}
& =x^{*}\left(\mathrm{ty}_{1}+\mathrm{uy}_{1}, \mathrm{ty}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{ty}_{\mathrm{r}}+\mathrm{uy} y_{\mathrm{r}}\right) \\
& =\left(\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{r}}\right) *\left(\mathrm{ty}_{1}+\mathrm{uy}_{1}, \mathrm{ty}_{2}+\mathrm{uy}_{2}, \ldots, \mathrm{ty}_{\mathrm{r}}+\mathrm{uy} y_{\mathrm{r}}\right) \\
& =\left(\mathrm{tx}_{1}+\mathrm{tuy}_{1}+\mathrm{u}^{2} y_{1}, \mathrm{tx}_{2}+\mathrm{tuy}_{2}+\mathrm{u}^{2} \mathrm{y}_{2}, \ldots, \mathrm{tx}_{\mathrm{r}}+\mathrm{tuy}_{\mathrm{r}}+\mathrm{u}^{2} \mathrm{y}_{\mathrm{r}}\right)
\end{aligned}
$$

I and II are equal if and only if $t^{2}=t(\bmod n)$ and $u^{2} \equiv u$ $(\bmod n)$. Thus V is a DS non associative semilinear algebra is a P -semilinear algebra if and only if $\mathrm{t}^{2} \equiv \mathrm{t}$ and $\mathrm{u}^{2} \equiv \mathrm{u}(\bmod \mathrm{n})$.

THEOREM 2.14: Let $Z_{n}$ be a $S$-ring.

$$
V=\left\{\left(x_{1}, x_{2}, \ldots, x_{r}\right) \mid x_{i} \in Z_{n}, l \leq i \leq r, *,(m, m)\right\}
$$

be a Smarandache non associative semilinear algebra over the $S$-ring $Z_{n}$.

$$
\text { If } m+m \equiv 1(\bmod n) \text { and } m^{2}=m(\bmod n) \text { then }
$$

(i) V is a DS Strong idempotent non associative semilinear algebra.
(ii) $V$ is a DS strong $P$-non associative semilinear algebra.
(iii) $V$ is a $D S$ strong non associative semilinear algebra.
(iv) $V$ is a DS strong Moufang non associative semilinear algebra.
(v) $V$ is a $D S$ strong non associative alternative non linear algebra.

The proof is direct and hence left as an exercise to the reader.

Now it is pertinent to mention here that if V is replaced by a column matrix that is

$$
V=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{m}
\end{array}\right] \right\rvert\, a_{i} \in Z_{n}, Z_{n} \text { a S-ring, } *,(t, u), 1 \leq i \leq m\right\} \text { or }
$$

if $\left\{\left.\left[\begin{array}{ccc}a_{11} & \ldots & a_{1 n} \\ a_{21} & \ldots & a_{2 n} \\ \vdots & & \vdots \\ a_{m 1} & \ldots & a_{m n}\end{array}\right] \right\rvert\, a_{i j} \in Z_{n}, 1 \leq i \leq m, 1 \leq j \leq n, Z_{n}\right.$ a S-ring, *, (t, u) \}

$$
\text { or if } V=\{\begin{array}{ccc}
{\left[\begin{array}{ccc}
a_{11} & \ldots & a_{1 n} \\
a_{21} & \ldots & a_{2 n} \\
\vdots & & \vdots \\
a_{n 1} & \ldots & a_{n n}
\end{array}\right]}
\end{array} \underbrace{}_{(t, u)\}} a_{i j} \in Z_{n}, Z_{n} \text { a } S \text { ring, } 1 \leq i, j \leq n, *,
$$

then all the above theorems 2.9 to 2.16 hold good without any difficulty.

We will give some examples of the situations described in the theorems.

Example 2.112: Let

$$
M=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{10}
\end{array}\right] \right\rvert\, a_{i} \in Z_{6},(3,4), *\right\}
$$

be a Double Smarandache non associative semilinear algebra over the $S$-ring $Z_{6} . \quad M$ is a strong $D S$ non associative Bol semilinear algebra over the $S$-ring $Z_{6}$.

Example 2.113: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in Z_{6},(10,6), *, 1 \leq i \leq 9\right\}
$$

be a SD non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) M is a DS strong P -non associative semilinear algebra.
(ii) M is a DS strong moufang non associative semilinear algebra.
(iii) m is a DS strong Bol non associative semilinear algebra.
(iv) M is a DS strong alternative non associative semilinear algebra
(v) M is a DS idempotent non associative semilinear algebra.

Example 2.114: Let

$$
P=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in Z_{12},(4,9), *, 1 \leq i \leq 30\right\}
$$

be a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) P is a DS strong P -non associative semilinear algebra.
(ii) P is a DS-strong Bol non associative semilinear algebra.
(iii) P is a DS strong Moufang non associative semilinear algebra.
(iv) P is a DS strong alternative non associative semilinear algebra and
(v) P is DS strong idempotent non associative semilinear algebra.

## Example 2.115: Let

$M=\left\{\left(a_{1}, a_{2}, a_{3}\right)\right.$ where $\left.a_{i} \in Z_{8}, 1 \leq i \leq 3, *,(3,6)\right\}$ be a DSstrong Bol (or Moufang or alternative or idempotent or P) non associative semilinear algebra over $\mathrm{Z}_{8} . \mathrm{Z}_{8}$ is not a S -ring.

## Example 2.116: Let

$$
\left.\left.V=\left\{\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15}
\end{array}\right] \right\rvert\, a_{i} \in Z_{10},(6,5), *\right\}
$$

be a DS strong Bol non associative semilinear algebra, DS strong Moufang non associative semilinear algebra, DS strong idempotent non associative semilinear algebra, DS strong alternative non associative semilinear algebra and DS strong P non associative semilinear algebra.

Next we proceed onto define structure similar to DS non associative semilinear algebras as well as Smarandache non associative semilinear algebras.

For this we use the concept of 'groupoid ring' by varying the ring we can build such structure.

DEFINITION 2.7: Let $G$ be a groupoid. F a field. FG be the groupoid ring. $F G$ is defined as the strong non associative semilinear algebra over $F$.
(For definition and properties of groupoid rings please refer [33]).

We now give examples of them.

Example 2.117: Let $\mathrm{G}=(\mathrm{Z}, *,(3,7))$ be a groupoid and R be a field. RG is the groupoid ring which is a strong non associative semilinear algebra over R.

For

$$
\mathrm{RG}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{~g}^{\mathrm{i}} \mid \mathrm{g}_{\mathrm{i}} \in \mathrm{Z}, *, \mathrm{a}_{\mathrm{i}} \in \mathrm{R},(3,7)\right\}
$$

is a strong non associative semilinear algebra over the field R . Thus we can create also a different way strong non associative semilinear algebras.

Example 2.118: Let $\mathrm{G}=\left\{\mathrm{Z}_{8},{ }^{*},(7,2)\right\}$ be a groupoid. Q be the field of rationals, QG be the groupoid ring QG is a strong non associative semilinear algebra over Q .

$$
\mathrm{QG}=\left\{\sum_{\mathrm{i}=0}^{7} \mathrm{a}_{\mathrm{i}} \mathrm{~g}^{\mathrm{i}} \mid \mathrm{g}_{\mathrm{i}} \in \mathrm{Z}_{8}=\left\{0=\mathrm{g}_{0}, \mathrm{~g}_{1}=1, \mathrm{~g}_{2}=2, \ldots, \mathrm{~g}_{7}=7\right\} ;\right.
$$

$\left.0 \leq \mathrm{i} \leq 7, *,(7,2) ; \mathrm{a}_{\mathrm{i}} \in \mathrm{Q}\right\}$. It is easily verifield; QG is also a strong non associative semilinear algebra over Q .

Example 2.119: Let $\mathrm{G}=\left\{\mathrm{Z}_{10}\right.$, ,,$\left.(9,2)\right\}$ be a groupoid. $\mathrm{Z}_{2}=\{0,1\}$ be the field of characteristic two.

$$
\begin{gathered}
Z_{2} G=\left\{\sum_{i=0}^{9} a_{i} \mathrm{~g}^{i} \mid g_{i} \in Z_{10}=\left\{g_{0}=0, g_{1}=1, \ldots, g_{9}=9\right\} ;\right. \\
\left.0 \leq i \leq 9, a_{i} \in Z_{2}, *,(9,2)\right\}
\end{gathered}
$$

is a groupoid ring as well as a strong non associative semilinear algebra over $\mathrm{Z}_{2}$.

Example 2.120: Let $G=\left\{\mathrm{Z}^{+} \cup\{0\},{ }^{*},(10,9)\right\}$ be a groupoid. $\mathrm{F}=\mathrm{Z}_{3}=\{0,1,2\}$ be the field of characteristic three. FG be the groupoid ring.

$$
F G=\left\{\sum_{i=0}^{\infty} a_{i} g^{i} \mid a_{i} \in Z_{3}=\{0,1,2\}, *, g_{i} \in Z=\left\{0, g_{0}, 1=g_{1},\right.\right.
$$

$$
\left.2=\mathrm{g}_{2}, \ldots, \mathrm{n}=\mathrm{g}_{\mathrm{n}}, \ldots\right\} .
$$

$\mathrm{g}_{\infty} * \mathrm{~g}_{\mathrm{i}}=\mathrm{g}_{\infty}=\mathrm{g}_{\mathrm{i}} * \mathrm{~g}_{\infty}$ is the defined '*' operation on $\infty=\mathrm{g}_{\infty}$.
Now FG can also be realized as a strong non associative semilinear algebra over the field $\mathrm{F}=\mathrm{Z}_{3}$.

We will define Smarandache strong non associative semilinear algebra if the field is replaced by a S-ring in these groupoid ring. We give examples of them.

Example 2.121: Let $\mathrm{M}=\left\{\mathrm{Z}_{9},{ }^{*},(7,2)\right\}$ be a groupoid. $\mathrm{F}=\mathrm{Z}_{6}$ be the S -ring.

FM be the groupoid S-ring $F M=\left\{\sum_{i=0}^{8} a_{i} g^{i} \mid a_{i} \in Z_{6}, g_{i} \in Z_{9}\right.$ $\left.=\left\{0=g_{0}, 1=g_{1}, 2=g_{2}, \ldots, g_{8}=8\right),{ }^{*},(7,2)\right\}$. Clearly FM is a Smarandache non associative semilinear algebra over the S-ring $\mathrm{Z}_{6}$.

It is pertinent to mention here that we can have different modulo integers $\mathrm{Z}_{\mathrm{n}}$ that can be used for the groupoid and rings which is clear from Example 2.121.

Example 2.122: Let $G=\left\{Z_{12}, *,(10,3)\right\}$ be the groupoid. $\mathrm{F}=\mathrm{Z}_{10}$ be the S-ring. FG be the groupoid ring.

$$
\begin{aligned}
& F G=\left\{\sum_{i=0}^{11} a_{i} g^{i} \mid a_{i} \in Z_{10}, g_{i} \in Z_{12}=\left\{0=g_{0}, 1=g_{1}, 2=g_{2},\right.\right. \\
& \left.\left.\ldots, \mathrm{g}_{11}=11\right\},{ }^{*},(10,3)\right\} .
\end{aligned}
$$

Clearly FG is a Smarandache non associative semilinear algebra over the S -ring $\mathrm{Z}_{10}$.

THEOREM 2.15: Let $G=\left\{Z_{n}\right.$, *, $\left.(t, u)\right\}$ be a groupoid and $Z_{m}$ be a $S$-ring. Let $Z_{m} G$ be the groupoid ring. $Z_{m} G$ the Smarandache non associative semilinear algebra is a strong Moufang Smarandache non associative semilinear algebra if and only if $t+u \equiv(\bmod n)$ and $t^{2}=t(\bmod n)$ and $u^{2}=u(\bmod n)$.

Proof: Straight forward and hence left as an exercise to the reader.

THEOREM 2.16: Let $G=\left\{Z_{n}\right.$, *, $\left.(t, u)\right\}$ be a groupoid. $Z_{m}$ be a $S$-ring. $Z_{m} G$ be the groupoid $S$-ring. $Z_{m} G$ is a Smarandache strong Bol non associative semilinear algebra if and only if $t+u \equiv 1(\bmod n), t^{3}=t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.

Proof is also direct as in case of groupoids.
THEOREM 2.17: Let $G=\left\{Z_{n},{ }^{*},(t, u)\right\}$ be a groupoid. $Z_{m}$ be a $S$-ring; $Z_{m} G$ be the groupoid $S$-ring. $Z_{m} G$ is a $S$-non associative idempotent semilinear algebra if $t+u \equiv 1(\bmod n)$.

Theorem 2.18: Let $G=\left\{Z_{n},{ }^{*},(t, u), t+u \equiv l(\bmod n)\right\}$ be a groupoid. $Z_{m}$ be a $S$-ring. The groupoid ring $Z_{m} G$ is a $S$-non associative $P$-semilinear algebra if and only if $t^{2} \equiv t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.

Theorem 2.19: Let $G=\left\{Z_{n}, *,(t, u), t+u \equiv 1(\bmod n)\right\}$ be a groupoid. $Z_{m}$ be a $S$-ring. The groupoid ring $Z_{m} G$ is a Smarandache alternative non associative semilinear algebra if and only if $t^{2} \equiv t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.

Now if in these theorems the groupoid $G$ is such that it is a row matrix with elements from $\left\{\mathrm{Z}_{\mathrm{n}}, *,(\mathrm{t}, \mathrm{u})=1, \mathrm{t}+\mathrm{u} \equiv 1 \bmod \mathrm{n}\right\}$ and ' $*$ ' is the operation on G or a column matrix with elements from $Z_{n}$ and '*' as its binary operation or a rectangular matrix with elements from $\mathrm{Z}_{\mathrm{n}}$ and * operation on G or a square matrix with entries from $Z_{\mathrm{n}}$ and * operation G then also for a S-ring $\mathrm{Z}_{\mathrm{m}}$ the groupoid ring $\mathrm{Z}_{\mathrm{m}} \mathrm{G}$ satisfies all the results of the theorem where $\mathrm{Z}_{\mathrm{m}} \mathrm{G}$ is also a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{\mathrm{m}}$.

We will only illustrate these situations by some examples.

## Example 2.123: Let

$$
V=\left\{\left(a_{1}, a_{2}, a_{3}\right) \mid a_{i} \in Z_{n},(t, u) ; t+u \equiv 1(\bmod n) ; 1 \leq i \leq 3\right\}
$$

be a groupoid. R be the field of reals. RV be the groupoid ring of the groupoid V over R. RV is a strong non associative semilinear algebra over R. RV is a P-strong non associative semilinear algebra if and only if $\mathrm{t}^{2} \equiv \mathrm{t}(\bmod \mathrm{n})$ and $\mathrm{u}^{2} \equiv \mathrm{u}(\bmod$ n ). So RV is a strong P-non associative semilinear algebra.

## Example 2.124: Let

$$
\left.\left.V=\left\{\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{7}
\end{array}\right] \right\rvert\, a_{i} \in Z_{n},(t, u), t+u \equiv 1(\bmod n) 1 \leq i \leq 7\right\}
$$

be a groupoid. Q the field, QV be the groupoid ring of the groupoid V over the field Q . QV is a Bol strong non associative semilinear algebra over $Q$ if and only if $t^{3} \equiv t(\bmod n)$ and $u^{2} \equiv u(\bmod n)$.

## Example 2.125: Let

$$
\left.\left.M=\left\{\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
a_{5} & a_{6} \\
a_{7} & a_{8} \\
a_{9} & a_{10} \\
a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in Z_{22}, 1 \leq i \leq 12, *,(12,11)\right\}
$$

be a groupoid. Q be a field. QM be the groupoid ring. QM is a strong non associative semilinear algebra which is Bol, Moufang and alternative.

Example 2.126: Let

$$
P=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{i} \in Z_{15}, 1 \leq i \leq 19, *,(6,10)\right\}
$$

be a groupoid. Q be the field. QP be the groupoid ring. QP is a strong non associative semilinear algebra which is Bol, P , Moufang and alternative and idempotent.

Example 2.127: Let

$$
\left.\left.\mathbf{M}=\left\{\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} \\
a_{16} & a_{17} & a_{18}
\end{array}\right] \right\rvert\, a_{i} \in Z_{14},(7,8), *, 1 \leq i \leq 18\right\}
$$

be a groupoid. R be the field. RM the groupoid ring. RM is a strong non associative semilinear algebra which is Bol, Moufang, P alternative and idempotent. Suppose $G$ is a $P$ groupoid when $\mathrm{F}=\mathrm{R}$ or Q or $\mathrm{Z}_{\mathrm{n}}$ then the groupoid ring; RG or QG or the S -groupoid ring $\mathrm{Z}_{\mathrm{n}} \mathrm{G}$ is a strong non associative P semilinear algebra over R or Q or a Smarandache strong non associative P -semilinear algebra over the S -ring $\mathrm{Z}_{\mathrm{n}}$.

The same type of result happens to be true if G is a Bol groupoid or a Moufang groupoid or an idempotent groupoid or an alternative groupoid. Inview of this we have the following theorems.

THEOREM 2.20: Let
$G=\left\{Z_{n}, *,(t, u), t+u \equiv 1(\bmod n) t^{2} \equiv t(\bmod n), u^{2} \equiv u(\bmod n)\right\}$ be a P-groupoid (or Bol groupoid or Moufang groupoid or alternative groupoid), $F=R$ (or $Q$ ) be the field. $F G$ be the groupoid ring. $F G$ the strong non associative semilinear algebra is a $P$-semilinear algebra (or Bol semilinear algebra or Moufang semilinear algebra or alternative semilinear algebra) over the field $F=R($ or $Q)$.

Proof is straight forward and hence left as an exercise to the reader.

Now having seen properties of non associative semilinear algebra we can as a matter of routine study their substructures and other related properties.

## Chapter Three

## Non Associative Linear Algebras

In this chapter we define a new class of non associative linear algebras using loops. We give several interesting properties associated with them. Infact these are generalized to non associative quasi linear algebras also. We now proceed onto define them and give examples of them.

DEFINITION 3.1: Let $L_{n}(m)$ be a loop $n$ a prime, $n>3$ be a loop. Suppose $F=Z_{n}$ be the field ( $n$ a prime) then we see $L_{n}(m)$ is a linear algebra over $Z_{n}$ called or defined as the non associative linear algebra over $Z_{n}$ if the following conditions are satisfied.
(i) For every $g \in L_{n}(m)$ and $\alpha \in Z_{n} g \alpha=\alpha . g \in L_{n}(m)$
(ii) $g=1 . g \in L_{n}(m)$ for all $g \in L_{n}(m)$
(iii) $0 . g=0 \in L_{n}(m)\left(0=g_{n}\right)$
(iv) $\alpha(g+h)=\alpha g+\alpha h$,
for all $\alpha \in Z_{n}$, and $g, h \in L_{n}(m)$.
For more about loop $L_{n}(m)$ please refer [37].

We will first illustrate this situation by some examples.
Example 3.1: Let $\mathrm{V}=\left\{\mathrm{e}, \mathrm{g}_{1}, \mathrm{~g}_{2}, \ldots, \mathrm{~g}_{7}\right\}$ given by the following table.

| $*$ | e | $\mathrm{g}_{1}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{7}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| e | e | $\mathrm{g}_{1}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{7}$ |
| $\mathrm{~g}_{1}$ | $\mathrm{~g}_{1}$ | e | $\mathrm{g}_{5}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{7}$ | $\mathrm{~g}_{4}$ |
| $\mathrm{~g}_{2}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{5}$ | e | $\mathrm{g}_{6}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{7}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ |
| $\mathrm{~g}_{3}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{6}$ | e | $\mathrm{g}_{7}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | $\mathrm{~g}_{5}$ |
| $\mathrm{~g}_{4}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{7}$ | e | $\mathrm{g}_{1}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ |
| $\mathrm{~g}_{5}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{7}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | e | $\mathrm{g}_{2}$ | $\mathrm{~g}_{6}$ |
| $\mathrm{~g}_{6}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{7}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ | e | $\mathrm{g}_{3}$ |
| $\mathrm{~g}_{7}$ | $\mathrm{~g}_{7}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{6}$ | $\mathrm{~g}_{3}$ | e |

$\mathrm{F}=\mathrm{Z}_{7}$ be the field. For any $\mathrm{x} \in \mathrm{V}$ and $\mathrm{a} \in \mathrm{F}$ we have the following product.

$$
\mathrm{ax}=\mathrm{ag}_{\mathrm{i}}=\mathrm{g}_{\mathrm{ai}(\bmod 7)}
$$

(if $\mathrm{e} \in \mathrm{V}, \mathrm{ae}=\mathrm{e}$ for all $\mathrm{a} \in \mathrm{F}$ ).
For instance if $\mathrm{a}=0 \mathrm{x}=\mathrm{g}_{3}$ a. $\mathrm{g}_{3}=\mathrm{g}_{0.3(\bmod 7)}$.
If $\mathrm{a}=1$ and $\mathrm{x}=\mathrm{g}_{3}$ then $\mathrm{a} \cdot \mathrm{x}=1 \mathrm{~g}_{3}=\mathrm{g}_{3.1}=\mathrm{g}_{3(\bmod 7)}=\mathrm{g}_{3}$.
If $\mathrm{a}=2$ and $\mathrm{x}=\mathrm{g}_{3}$ then $\mathrm{a} \cdot \mathrm{x}=2 \mathrm{~g}_{3}=\mathrm{g}_{2.3}=\mathrm{g}_{6(\bmod 7)}=\mathrm{g}_{6}$.
If $\mathrm{a}=3$ and $\mathrm{x}=\mathrm{g}_{3}$ then $\mathrm{a} \cdot \mathrm{x}=3 \cdot \mathrm{~g}_{3}=\mathrm{g}_{3.3(\bmod 7)}=\mathrm{g}_{2}$.
If $\mathrm{a}=4$ and $\mathrm{x}=\mathrm{g}_{3}$ then $\mathrm{a} \cdot \mathrm{x}=4 \mathrm{~g}_{5}=\mathrm{g}_{4.3(\bmod 7)}=\mathrm{g}_{5}$.
If $\mathrm{a}=5$ and $\mathrm{x}=\mathrm{g}_{3}$ then $\mathrm{a} \cdot \mathrm{x}=5 \mathrm{~g}_{3}=\mathrm{g}_{5.3(\bmod 7)}=\mathrm{g}_{1}$.
If $a=6$ and $x=g_{3}$ then $a \cdot x=6 \cdot g_{3}=g_{6.3(\bmod 7)}=g_{4(\bmod 7)}=g_{4}$.

Thus we see V is a non associative linear algebra over the field $\mathrm{Z}_{7}$.

Clearly number of elements in V is eight.
Example 3.2: Let $\mathrm{V}=\left\{\mathrm{e}, \mathrm{g}_{1}, \mathrm{~g}_{2}, \mathrm{~g}_{3}, \mathrm{~g}_{4}, \mathrm{~g}_{5}\right\}$ be a given by the following table.

| $*$ | e | $\mathrm{g}_{1}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{5}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| e | e | $\mathrm{g}_{1}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{5}$ |
| $\mathrm{~g}_{1}$ | $\mathrm{~g}_{1}$ | e | $\mathrm{g}_{3}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{4}$ |
| $\mathrm{~g}_{2}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{5}$ | e | $\mathrm{g}_{4}$ | $\mathrm{~g}_{1}$ | $\mathrm{~g}_{3}$ |
| $\mathrm{~g}_{3}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | e | $\mathrm{g}_{5}$ | $\mathrm{~g}_{2}$ |
| $\mathrm{~g}_{4}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{3}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ | e | $\mathrm{g}_{1}$ |
| $\mathrm{~g}_{5}$ | $\mathrm{~g}_{5}$ | $\mathrm{~g}_{2}$ | $\mathrm{~g}_{4}$ | $\mathrm{~g}_{1}$ | $\mathrm{~g}_{3}$ | e |

V is a loop of order 6 . Consider $\mathrm{F}=\mathrm{Z}_{5} . \mathrm{V}$ is a non associative linear algebra over the field $\mathrm{Z}_{5}$.

Example 3.3: Let $\mathrm{V}=\mathrm{L}_{19}(4)$ be a loop; V is a non associative linear algebra over the field $\mathrm{F}=\mathrm{Z}_{19}$.

We can define dimension of V over $\mathrm{Z}_{\mathrm{p}}$ as the number of linearly independent elements needed to generate V .

We see in all the three examples $\left\{\mathrm{e}, \mathrm{g}_{\mathrm{i}}\right\}$ serves as the set which can generate V over the respective fields.

Example 3.4: Let $\mathrm{M}=\mathrm{L}_{11}(3)$ be a loop. M is a non associative linear algebra over the field $\mathrm{Z}_{11}=\mathrm{F}$. Take $\left\{\mathrm{e}, \mathrm{g}_{1}\right\} \subseteq \mathrm{M}$ generates M over $\mathrm{Z}_{11}=\mathrm{F}$. Infact $\left\{\mathrm{e}, \mathrm{g}_{\mathrm{i}}\right\} \subseteq \mathrm{M}(\mathrm{i} \neq 11)$ generates M over $\mathrm{Z}_{11}$. Thus M has 10 and only 10 subsets which are distinct can generate M . Further dimension of M over $\mathrm{Z}_{11}$ is two.

Inview of this we have the following theorem.
THEOREM 3.1: Let $V=L_{p}(m)(m \neq p$ or $m \neq 1$ or $1<m<p)$ be a loop, $p$ a prime. $F=Z_{p}$ be the field $F V$ is the non associative linear algebra of dimension two. $F V$ has ( $p-1$ ) distinct subsets of the form $\left\{e, g_{i}\right\} ; i=1,2, \ldots, p-1, i \neq g_{p}$. Each of the subsets $\left\{e, g_{i}\right\}$ can generate $V$ over $F$.

Proof is direct and hence is left as an exercise to the reader. It is important and interesting to note that by varying $m$ we can get several non associative linear algebras of same cardinality. We will first describe in case of $\mathrm{Z}_{5}$. We see we have 3 distinct
non associative linear algebras of order six given by $\mathrm{L}_{5}(2), \mathrm{L}_{5}(3)$ and $L_{5}(4)$ defined over the field $Z_{5}$.

We say a non associative linear algebra $L_{p}(m)$ is commutative if $L_{p}(m)$ is a commutative loop.

We shall denote the collection of all non associative linear algebras of same order by $L_{p}=\left\{L_{p}(m) \mid 1<m<p\right\}$. Thus we can say for a given $L_{p}(m) \in L_{p} . \quad L_{p}(m)$ is a non associative linear algebra over $\mathrm{Z}_{\mathrm{p}}=\mathrm{F}$.

It is pertinent to mention here that as in case of usual linear algebras we cannot say that non associative linear algebras of same dimension defined over the same field are isomorphic. This is illustrated by the following examples.

Example 3.5: Let $\mathrm{M}=\mathrm{L}_{7}(3)$ be a loop of order $8 . \mathrm{F}=\mathrm{L}_{7}$ be the field of characteristic seven. M is a non associative linear algebra over $\mathrm{Z}_{7}$. Clearly dimension of M over $\mathrm{Z}_{7}$ is two.

Example 3.6: Let $\mathrm{V}=\mathrm{L}_{7}$ (4) be a loop of order 8. $\mathrm{F}=\mathrm{Z}_{7}$ be the field of characteristic seven. V is a non associative linear algebra over $\mathrm{Z}_{7}$ of dimension two.

It is interesting to note both M and V are non associative linear algebras over the same field $\mathrm{Z}_{7}$ and the same dimension two but however M and V are not isomorphic. Thus even if two non associative linear algebras are defined over the same field and of same dimension they are not isomorphic.

Inview of this we have the following theorem.
THEOREM 3.2: Let $V=L_{p}(m)$ and $W=L_{p}(p+1 / 2)$ be two non associative linear algebras of dimension two defined over the field $Z_{p}$. Clearly $V \neq W$.

Proof: Clearly both V and W are of dimension two over $\mathrm{Z}_{\mathrm{p}}$. However we see W is a commutative linear algebra over $\mathrm{Z}_{\mathrm{p}}$ where as V is a non commutative linear algebra over $\mathrm{Z}_{\mathrm{p}}$. So V is not isomorphic with W. Hence the result.

Now we can define substructure in them provided, $\mathrm{H} \subseteq$ $L_{n}(m)$ and $H$ itself is a proper loop such that $H$ is a non associative linear algebra over $\mathrm{Z}_{\mathrm{n}}$ ( n prime) then H is a non associative linear subalgebra of $L_{n}(m)$ over $Z_{n}$. If $L_{n}(m)$ has no proper non associative linear subalgebras we define $\mathrm{L}_{\mathrm{n}}(\mathrm{m})$ to be simple.

Example 3.7: Let $\mathrm{V}=\mathrm{L}_{23}(12)$ be a non associative linear algebra over the field $\mathrm{F}=\mathrm{Z}_{23}$. V has no proper non associative linear subalgebras as the loop $\mathrm{L}_{23}(12)$ has no subloops.

Example 3.8: Let $\mathrm{M}=\mathrm{L}_{29}(20)$ be a non associative linear algebra over the field $\mathrm{F}=\mathrm{Z}_{29}$. V has no proper non associative linear subalgebras, that is V is simple.

Inview of this we have the following theorem.
THEOREM 3.3: Let $V=L_{n}(m)$ ( $n$ a prime) be a non associative linear algebra over $Z_{n}=F$ ( $n$ a prime). Clearly $V$ is simple.

Proof: Follows from the fact V is a loop such that V has no subloops as n is a prime hence the claim.

Now as in case of linear algebras we can define in case of non associative linear algebras the notion of linear operator and linear functionals.

If V and W are non associative linear algebras defined over the same field $\mathrm{F}=\mathrm{Z}_{\mathrm{p}}$ we can define $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{W}$ to be a linear transformation of V to W .

Interested reader can study these structures.

We see $\mathrm{V}_{\mathrm{n}}=\mathrm{L}_{\mathrm{n}}=\left\{\mathrm{L}_{\mathrm{n}}(\mathrm{m}) \mid \mathrm{n}\right.$ a prime, $\left.1<\mathrm{m}<\mathrm{n}\right\}$ contains one and only one non associative linear algebra which is commutative.

THEOREM 3.4: Let $L_{n}(m) \in L_{n}$ be a non associative linear algebra over the field $Z_{n}$ ( $n$ a prime). $L_{n}$ has one and only one commutative, non associative linear algebra when $m=(n+1) / 2$.

Now we can define some more non associative linear algebras using $\mathrm{L}_{\mathrm{n}}(\mathrm{m})$; n a prime. We illustrate them by examples as the definition and formation of them are simple.

Example 3.9: Let

$$
V=\left\{\left(a_{1}, a_{2}, \ldots, a_{7}, a_{8}\right) \mid a_{i} \in L_{11}(7) ; 1 \leq i \leq 8, *\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{11}$.
Example 3.10: Let $V=\left\{\left(a_{1}, a_{2}, a_{3}\right) \mid a_{i} \in L_{29}(2) ; 1 \leq i \leq 3, *\right\}$ be a non associative row matrix linear algebra over the field $\mathrm{Z}_{29}$. Take $\mathrm{x}=\left(\mathrm{g}_{3}, \mathrm{~g}_{10}, \mathrm{~g}_{0}\right)$ and $\mathrm{y}=\left(\mathrm{g}_{7}, \mathrm{~g}_{2}, \mathrm{~g}_{11}\right)$ in V .

$$
\begin{aligned}
\text { Now } \mathrm{x} * \mathrm{y} & =\left(\mathrm{g}_{3} * \mathrm{~g}_{7}, \mathrm{~g}_{10} * \mathrm{~g}_{2}, \mathrm{~g}_{0} * \mathrm{~g}_{11}\right) \\
& =\left(\mathrm{g}_{14-3(\bmod 29)}, \mathrm{g}_{4-10(\bmod 29)}, \mathrm{g}_{22-0(\bmod 29)}\right) \\
& =\left(\mathrm{g}_{11}, \mathrm{~g}_{23}, \mathrm{~g}_{22}\right) \in \mathrm{V} . \\
\text { Take } 7 \mathrm{x} & =\left(\mathrm{g}_{7.3(\bmod 29}, \mathrm{g}_{7.10(\bmod 29)}, \mathrm{g}_{8.0(\bmod 29)}\right) \\
& =\left(\mathrm{g}_{21}, \mathrm{~g}_{12}, \mathrm{~g}_{0}\right) \in \mathrm{V} .
\end{aligned}
$$

This is the way operations are made on V .
Example 3.11: Let

$$
V=\left\{\left(a_{1}, a_{2}, \ldots, a_{8}\right) \mid a_{i} \in Z_{7}(3) ; 1 \leq i \leq 8, *\right\}
$$

be a non associative row matrix linear algebra over the field $\mathrm{Z}_{7}$.

$$
\left\{(e, e, \ldots, e),\left(e, g_{1}, \ldots, e\right),\left(g_{1}, e, \ldots, e\right),\left(e, e, g_{1}, e, \ldots, e\right),\right.
$$ $\left.\ldots,\left(\mathrm{e}, \mathrm{e}, \ldots, \mathrm{g}_{1}\right)\right\}$ is a basis of V over $\mathrm{Z}_{7}$.

## Example 3.12: Let

$$
\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{5}(3), *,(1 \leq \mathrm{i} \leq 4)\right\}
$$

be a non associative row matrix linear algebra over the field $\mathrm{F}=$ $\mathrm{Z}_{5}$.

Now we proceed onto give examples of column matrix non associative linear algebras over a field $\mathrm{Z}_{\mathrm{p}}$ as the definition of this concept is a matter of routine.

## Example 3.13: Let

$$
V=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{7}
\end{array}\right] \right\rvert\, a_{i} \in Z_{43}(3) ; 1 \leq i \leq 7\right\}
$$

be a non associative column matrix linear algebra over the field $\mathrm{Z}_{43}$.

Example 3.14: Let

$$
V=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right] \right\rvert\, a_{i} \in L_{5}(3) ; 1 \leq i \leq 4\right\}
$$

be a column matrix non associative linear algebra over the field $\mathrm{Z}_{5}$.

$$
\text { Consider } \mathrm{x}=\left[\begin{array}{l}
\mathrm{g}_{1} \\
\mathrm{~g}_{3} \\
\mathrm{~g}_{4} \\
\mathrm{~g}_{0}
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{l}
\mathrm{g}_{2} \\
\mathrm{~g}_{2} \\
\mathrm{~g}_{3} \\
\mathrm{~g}_{1}
\end{array}\right] \text { in } \mathrm{V} \text {. }
$$

$$
\begin{aligned}
& \text { Now } \mathrm{x} * \mathrm{y}=\left[\begin{array}{l}
\mathrm{g}_{1} * \mathrm{~g}_{2} \\
\mathrm{~g}_{3} * \mathrm{~g}_{2} \\
\mathrm{~g}_{4} * \mathrm{~g}_{3} \\
\mathrm{~g}_{0} * \mathrm{~g}_{1}
\end{array}\right] \\
& =\left[\begin{array}{l}
\mathrm{g}_{6-2(\bmod 5)} \\
\mathrm{g}_{6-6(\bmod 5)} \\
\mathrm{g}_{9-8(\bmod 5)} \\
\mathrm{g}_{3-0(\bmod 5)}
\end{array}\right]=\left[\begin{array}{l}
\mathrm{g}_{4} \\
\mathrm{~g}_{0} \\
\mathrm{~g}_{1} \\
\mathrm{~g}_{3}
\end{array}\right] .
\end{aligned}
$$

$$
\text { Now } \mathrm{y} * \mathrm{x}=\left[\begin{array}{l}
\mathrm{g}_{2} * \mathrm{~g}_{1} \\
\mathrm{~g}_{2} * \mathrm{~g}_{3} \\
\mathrm{~g}_{3} * \mathrm{~g}_{4} \\
\mathrm{~g}_{1} * \mathrm{~g}_{0}
\end{array}\right]=\left[\begin{array}{c}
\mathrm{g}_{3-4(\bmod 5)} \\
\mathrm{g}_{9-4(\bmod 5)} \\
\mathrm{g}_{12-6(\bmod 5)} \\
\mathrm{g}_{0-2(\bmod 5)}
\end{array}\right]=\left[\begin{array}{c}
\mathrm{g}_{4} \\
\mathrm{~g}_{0} \\
\mathrm{~g}_{1} \\
\mathrm{~g}_{3}
\end{array}\right]
$$

Clearly $x^{*} y=y^{*} x$.
Thus V is a non associative commutative column matrix linear algebra over the field $\mathrm{Z}_{5}$.

Take $4 \in Z_{5}$.

$$
4 \mathrm{x}=\left[\begin{array}{l}
\mathrm{g}_{4.1(\bmod 5)} \\
\mathrm{g}_{4.3(\bmod 5)} \\
\mathrm{g}_{4.4(\bmod 5)} \\
\mathrm{g}_{4.0(\bmod 5)}
\end{array}\right]=\left[\begin{array}{l}
\mathrm{g}_{4} \\
\mathrm{~g}_{2} \\
\mathrm{~g}_{1} \\
\mathrm{~g}_{0}
\end{array}\right] \in \mathrm{V} .
$$

V is a commutative non associative linear algebra of finite order.

## Example 3.15: Let

$$
V=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3}
\end{array}\right] \right\rvert\, a_{i} \in L_{7}(3) ; 1 \leq i \leq 3, *\right\}
$$

be a non associative linear algebra over the field $\mathrm{Z}_{7}$.

$$
\text { Consider } \mathrm{B}=\left\{\left[\begin{array}{l}
\mathrm{e} \\
\mathrm{e} \\
\mathrm{e}
\end{array}\right],\left[\begin{array}{l}
\mathrm{g}_{1} \\
\mathrm{e} \\
\mathrm{e}
\end{array}\right],\left[\begin{array}{c}
\mathrm{e} \\
\mathrm{~g}_{1} \\
\mathrm{e}
\end{array}\right], \left.\left[\begin{array}{c}
\mathrm{e} \\
\mathrm{e} \\
\mathrm{~g}_{1}
\end{array}\right] \right\rvert\, \mathrm{g}_{1} \in \mathrm{~L}_{7}(3)\right\} \text { is a basis }
$$ of B over $\mathrm{Z}_{7}$.

THEOREM 3.5: Let $V=\left\{\left(a_{l}, \ldots, a_{q}\right) \mid a_{i} \in L_{n}(m) ; 1 \leq i \leq q\right.$, * $\}$ be a non associative row matrix linear algebra over the field $Z_{n}$ ( $n$ a prime). $V$ is a commutative non associative row matrix linear algebra if and only if $m=(n+1) / 2$.

## Proof is straight forward for more refer [38].

## TheOrem 3.6: Let

$$
V=\left\{\left.\left[\begin{array}{c}
a_{l} \\
a_{2} \\
\vdots \\
a_{t}
\end{array}\right] \right\rvert\, a_{i} \in L_{n}(m) ; 1 \leq i \leq t, *\right\}
$$

be a non associative column matrix linear algebra over the field $Z_{n}$ ( $n$ a prime). $V$ is a commutative non associative column matrix linear algebra if and only if $m=(n+1) / 2$.

This proof is left as an exercise to the reader.

## Example 3.16: Let

$$
M=\left\{\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in L_{13}(m) ; 1 \leq i \leq 12\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{13}$.

Example 3.17: Let

$$
P=\left\{\left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in L_{53}(m) ; 1 \leq i \leq 4, *\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{53}$.

## Example 3.18: Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15}
\end{array}\right] \right\rvert\, a_{i} \in L_{13}(4) ; 1 \leq i \leq 15, *\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{13}$.

$$
\text { Let } \mathrm{x}=\left[\begin{array}{llll}
\mathrm{g}_{0} & \mathrm{~g}_{1} & \mathrm{~g}_{2} & \mathrm{~g}_{3} \\
\mathrm{~g}_{7} & \mathrm{~g}_{0} & \mathrm{~g}_{1} & \mathrm{~g}_{2} \\
\mathrm{~g}_{6} & \mathrm{~g}_{1} & \mathrm{~g}_{0} & \mathrm{~g}_{3} \\
\mathrm{~g}_{0} & \mathrm{~g}_{4} & \mathrm{~g}_{1} & \mathrm{~g}_{0} \\
\mathrm{~g}_{1} & \mathrm{~g}_{0} & \mathrm{~g}_{5} & \mathrm{~g}_{1}
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{llll}
\mathrm{g}_{1} & \mathrm{~g}_{2} & \mathrm{~g}_{1} & \mathrm{~g}_{2} \\
\mathrm{~g}_{0} & \mathrm{~g}_{1} & \mathrm{~g}_{0} & \mathrm{~g}_{1} \\
\mathrm{~g}_{2} & \mathrm{~g}_{0} & \mathrm{~g}_{2} & \mathrm{~g}_{0} \\
\mathrm{~g}_{4} & \mathrm{~g}_{1} & \mathrm{~g}_{1} & \mathrm{~g}_{4} \\
\mathrm{~g}_{1} & \mathrm{~g}_{4} & \mathrm{~g}_{4} & \mathrm{~g}_{1}
\end{array}\right]
$$

be in W. To find $x * y$;

$$
\mathrm{X}^{*} \mathrm{y}=\left[\begin{array}{llll}
\mathrm{g}_{4-0(\bmod 13)} & \mathrm{g}_{8-3(\bmod 13)} & \mathrm{g}_{4-6(\bmod 13)} & \mathrm{g}_{8-9(\bmod 13)} \\
\mathrm{g}_{0-21(\bmod 13)} & \mathrm{g}_{4-0(\bmod 13)} & \mathrm{g}_{0-3(\bmod 13)} & \mathrm{g}_{4-6(\bmod 13)} \\
\mathrm{g}_{8-18(\bmod 13)} & \mathrm{g}_{0-3(\bmod 13)} & \mathrm{g}_{8-0(\bmod 13)} & \mathrm{g}_{0-9(\bmod 13)} \\
\mathrm{g}_{16-0(\bmod 13)} & \mathrm{g}_{4-12(\bmod 13)} & \mathrm{g}_{4-3(\bmod 13)} & \mathrm{g}_{16-0(\bmod 13)} \\
\mathrm{g}_{4-3(\bmod 13)} & \mathrm{g}_{16-0(\bmod 13)} & \mathrm{g}_{16-15(\bmod 13)} & \mathrm{g}_{4-3(\bmod 13)}
\end{array}\right]
$$

$$
=\left[\begin{array}{llll}
\mathrm{g}_{4} & \mathrm{~g}_{5} & \mathrm{~g}_{11} & \mathrm{~g}_{12} \\
\mathrm{~g}_{5} & \mathrm{~g}_{4} & \mathrm{~g}_{10} & \mathrm{~g}_{11} \\
\mathrm{~g}_{3} & \mathrm{~g}_{10} & \mathrm{~g}_{8} & \mathrm{~g}_{4} \\
\mathrm{~g}_{3} & \mathrm{~g}_{5} & \mathrm{~g}_{1} & \mathrm{~g}_{3} \\
\mathrm{~g}_{1} & \mathrm{~g}_{3} & \mathrm{~g}_{1} & \mathrm{~g}_{1}
\end{array}\right]
$$

This is the way of operation * is performed.

$$
7 \mathrm{x}=\left[\begin{array}{llll}
\mathrm{g}_{0} & \mathrm{~g}_{7} & \mathrm{~g}_{1} & \mathrm{~g}_{8} \\
\mathrm{~g}_{10} & \mathrm{~g}_{0} & \mathrm{~g}_{7} & \mathrm{~g}_{1} \\
\mathrm{~g}_{3} & \mathrm{~g}_{7} & \mathrm{~g}_{0} & \mathrm{~g}_{8} \\
\mathrm{~g}_{0} & \mathrm{~g}_{2} & \mathrm{~g}_{7} & \mathrm{~g}_{0} \\
\mathrm{~g}_{7} & \mathrm{~g}_{0} & \mathrm{~g}_{9} & \mathrm{~g}_{7}
\end{array}\right] \in \mathrm{V} .
$$

Example 3.19: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{11}(4) ; 1 \leq i \leq 9, *\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{11}$.

$$
\begin{gathered}
\text { Let } \mathrm{x}=\left[\begin{array}{lll}
\mathrm{g}_{4} & \mathrm{~g}_{0} & \mathrm{~g}_{7} \\
\mathrm{~g}_{8} & \mathrm{~g}_{1} & \mathrm{~g}_{3} \\
\mathrm{~g}_{1} & \mathrm{~g}_{2} & \mathrm{~g}_{4}
\end{array}\right] \text { and } \mathrm{y}=\left[\begin{array}{lll}
\mathrm{g}_{3} & \mathrm{~g}_{1} & \mathrm{~g}_{2} \\
\mathrm{~g}_{4} & \mathrm{~g}_{7} & \mathrm{~g}_{1} \\
\mathrm{~g}_{2} & \mathrm{~g}_{0} & \mathrm{~g}_{5}
\end{array}\right] \text { be in } \mathrm{M} . \\
\mathrm{x} * \mathrm{y}=\left[\begin{array}{lll}
\mathrm{g}_{12-12(\bmod 11)} & \mathrm{g}_{4-0(\bmod 11)} & \mathrm{g}_{8-21(\bmod 11)} \\
\mathrm{g}_{16-24(\bmod 11)} & \mathrm{g}_{28-3(\bmod 11)} & \mathrm{g}_{4-9(\bmod 11)} \\
\mathrm{g}_{8-3(\bmod 11)} & \mathrm{g}_{0-6(\bmod 11)} & \mathrm{g}_{20-12(\bmod 11)}
\end{array}\right] \\
=\left[\begin{array}{lll}
\mathrm{g}_{0} & \mathrm{~g}_{4} & \mathrm{~g}_{7} \\
\mathrm{~g}_{3} & \mathrm{~g}_{3} & \mathrm{~g}_{6} \\
\mathrm{~g}_{5} & \mathrm{~g}_{5} & \mathrm{~g}_{8}
\end{array}\right] \in \mathrm{M}
\end{gathered}
$$

This is the way operation is performed on the linear algebra which is both non associative and non commutative.

## Example 3.20: Let

be a non associative matrix linear algebra which is non commutative.

## Example 3.21: Let

$$
P=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{12} \\
a_{13} & a_{14} & \ldots & a_{24} \\
a_{25} & a_{26} & \ldots & a_{36}
\end{array}\right] \right\rvert\, a_{i} \in L_{7}(3) ; *, 1 \leq i \leq 36\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{7}$.

## Example 3.22: Let

$$
P=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in L_{29}(3) ;{ }^{*}, 1 \leq i \leq 30\right\}
$$

be a non associative matrix linear algebra over the field $\mathrm{Z}_{29}$.

Now we can define linear transformation of two non associative matrix linear algebras, substructures linear operators and linear functionals as in case of usual linear algebras. These are illustrated with examples.

Example 3.23: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in L_{23}(7) ; *, 1 \leq i \leq 12\right\}
$$

and

$$
V=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{6} \\
a_{7} & a_{8} & \ldots & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in L_{23}(8), *, 1 \leq i \leq 12\right\}
$$

be two non associative linear algebras defined over the field $\mathrm{F}=$ $\mathrm{Z}_{23}$.

Define a map $\mathrm{T}: \mathrm{M} \rightarrow \mathrm{V}$ by

$$
\mathrm{T}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} \\
a_{10} & a_{11} & a_{12}
\end{array}\right]\right)=\left[\begin{array}{llllll}
a_{1} & a_{4} & a_{7} & a_{10} & a_{2} & a_{5} \\
a_{8} & a_{11} & a_{3} & a_{6} & a_{9} & a_{12}
\end{array}\right]
$$

It is easily verified T is a linear transformation of M into V .

## Example 3.24: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{29}(10) ; 1 \leq i \leq 9\right\}
$$

be a non associative linear algebra over the field $\mathrm{Z}_{29}$.
Consider

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{lll}
\mathrm{a} & \mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a} & \mathrm{a}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{29}(10), *\right\} \subseteq \mathrm{M}
$$

be a non associative linear subalgebra of M over the field $\mathrm{Z}_{29}$.

## Example 3.25: Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{i} \in L_{23}(9) ; *, 1 \leq i \leq 16\right\}
$$

be a non associative linear algebra over the field $\mathrm{Z}_{23}$.

Let $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{W}$ such that
$\mathrm{T}\left(\left[\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right]\right)=\left[\begin{array}{llll}a_{1} & a_{5} & a_{9} & a_{13} \\ a_{2} & a_{6} & a_{10} & a_{14} \\ a_{3} & a_{7} & a_{11} & a_{15} \\ a_{4} & a_{8} & a_{12} & a_{16}\end{array}\right]$.
T is a linear operator on W .

## Example 3.26: Let

$$
\left.\left.\mathrm{V}=\left\{\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
\vdots & \vdots & \vdots & \vdots \\
a_{37} & a_{38} & a_{39} & a_{40}
\end{array}\right] \right\rvert\, a_{i} \in L_{11}(4) ; *, 1 \leq i \leq 40\right\}
$$

be a non associative linear algebra over the field $\mathrm{Z}_{11}$.
Define $\mathrm{f}: \mathrm{V} \rightarrow \mathrm{Z}_{11}$ by

$$
\mathrm{f}\left(\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
\vdots & \vdots & \vdots & \vdots \\
a_{37} & a_{38} & a_{39} & a_{40}
\end{array}\right]\right)=1+2+3+4(\bmod 11)
$$

That is if $\mathrm{f}\left(\left[\begin{array}{cccc}\mathrm{a}_{8} & a_{7} & a_{1} & a_{0} \\ \mathrm{a}_{2} & a_{3} & a_{5} & a_{6} \\ \vdots & \vdots & \vdots & \vdots \\ a_{10} & a_{1} & a_{0} & a_{2}\end{array}\right]\right)=8+7+1+0(\bmod 11)$. $=5$.

It is easily verified f is a linear functional on V .
Example 3.27: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{5}(3), *, 1 \leq i \leq 9\right\}
$$

be a non associative linear algebra over the field $\mathrm{Z}_{5}$.
Consider

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{lll}
\mathrm{a} & \mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a} & \mathrm{a}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{5}(3), *\right\} \subseteq \mathrm{M} ;
$$

V is a non associative linear sub algebra of M over the field $\mathrm{Z}_{5}$. Take
$\mathrm{T}: \mathrm{M} \rightarrow \mathrm{M}$ defined by

$$
T\left(\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right]\right)=\left[\begin{array}{lll}
a_{1} & a_{4} & a_{7} \\
a_{2} & a_{5} & a_{8} \\
a_{3} & a_{6} & a_{9}
\end{array}\right] .
$$

It is easily verified T is a linear operator on M .
Consider the map

$$
\mathrm{f}: \mathrm{M} \rightarrow \mathrm{Z}_{5} \text { defined by } \mathrm{f}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{2} & a_{0} \\
\mathrm{a}_{2} & a_{0} & a_{2}
\end{array}\right]\right)
$$

$=$ sum of the suffix values of $a_{i}$ which is

$$
1+2+3+4+2+0+2+0+2=1(\bmod 5) .
$$

We will just show for $a v \in M$; let $v=\left[\begin{array}{lll}a_{0} & a_{2} & a_{4} \\ a_{3} & a_{2} & a_{0} \\ a_{0} & a_{5} & a_{1}\end{array}\right]$ be in $M$.

$$
\begin{aligned}
& f\left(\left[\begin{array}{lll}
\mathrm{a}_{0} & \mathrm{a}_{2} & \mathrm{a}_{4} \\
\mathrm{a}_{3} & \mathrm{a}_{2} & \mathrm{a}_{0} \\
\mathrm{a}_{0} & \mathrm{a}_{3} & \mathrm{a}_{1}
\end{array}\right]\right)=0+2+4+3+2+0+0+3+1(\bmod 5) \\
& \quad=0
\end{aligned}
$$

Thus $f$ is a linear functional on $V$.
Now we proceed onto define non associative quasi linear algebra of polynomials.

Example 3.28: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in L_{7}(3) ; *\right\}
$$

be a non associative quasi linear algebra of polynomials over the field $\mathrm{Z}_{7}$.

Example 3.29: Let

$$
\mathrm{W}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{23}(8) ; *\right\}
$$

be a non associative quasi linear algebra of polynomials over the field $\mathrm{Z}_{23}$.

Take

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{23}(8) ; *\right\} \subseteq \mathrm{W},
$$

V is a non associative quasi linear subalgebras of W over the field $\mathrm{Z}_{23}$.

## Example 3.30: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{l}
d_{1} \\
d_{2} \\
d_{3} \\
d_{4} \\
d_{5}
\end{array}\right]\right. \text { with } d_{j} \in L_{11}(3) ; *, 1 \leq j \leq 5\right\}
$$

be a non associative column matrix coefficient quasi linear algebra over the field $\mathrm{Z}_{11}$.

Take

$$
W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a=\left[\begin{array}{l}
d \\
d \\
d \\
d \\
d
\end{array}\right] d \in L_{11}(3)\right. ; *\right\} \subseteq M
$$

W is a non associative quasi linear subalgebra of M over the field $\mathrm{Z}_{11}$.

## Example 3.31: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}
\mathrm{d}_{1} \\
\mathrm{~d}_{2} \\
\vdots \\
\mathrm{~d}_{20}
\end{array}\right]\right. \text { with } \mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{29}(10) ; *, 1 \leq \mathrm{j} \leq 20\right\}
$$

be a non associative column matrix coefficient quasi linear algebra over the field $\mathrm{Z}_{29}$.

Example 3.32: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{l}
\mathrm{d}_{1} \\
\mathrm{~d}_{2}
\end{array}\right]\right. \text { with } \mathrm{d}_{1}, \mathrm{~d}_{2} \in \mathrm{~L}_{31}(8), *\right\}
$$

be a non associative column matrix coefficient quasi linear algebra over the field $\mathrm{Z}_{31}$.

Example 3.33: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \mathrm{~d}_{2}, \ldots, \mathrm{~d}_{20}\right) \text { with } \mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{13}(3), *, 1 \leq \mathrm{j} \leq 20\right\}
$$

be a non associative column matrix coefficient quasi linear algebra over the field $\mathrm{Z}_{13}$.

Example 3.34: Let

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(d_{1}, d_{2}\right) \text { with } d_{j} \in L_{11}(4), *, 1 \leq j \leq 2\right\}
$$

be a non associative quasi linear algebra of row coefficient polynomials over the field $\mathrm{Z}_{11}$.

Example 3.35: Let

$$
\mathrm{M}=\left\{\sum \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \ldots, \mathrm{~d}_{11}\right) \text { with } \mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{5}(3),{ }^{*}, 1 \leq \mathrm{j} \leq 11\right\}
$$

be a non associative quasi linear algebra of row matrix coefficient polynomials.
(i) Find dimension of M over $\mathrm{Z}_{5}$.
(ii) Prove M is commutative.

Example 3.36: Let

$$
M=\left\{\sum a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccccc}
d_{1} & d_{2} & d_{3} & \ldots & d_{15} \\
d_{16} & d_{17} & d_{18} & \ldots & d_{30} \\
d_{31} & d_{32} & d_{33} & \ldots & d_{45}
\end{array}\right]\right.\right.
$$

$$
\text { with } \left.\mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{23}(12),{ }^{*}, 1 \leq \mathrm{j} \leq 45\right\}
$$

be a non associative quasi linear algebra of row matrix coefficient polynomials.

## Example 3.37: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}
\mathrm{d}_{1} & \mathrm{~d}_{2} & \mathrm{~d}_{3} & \mathrm{~d}_{4} \\
\mathrm{~d}_{5} & \mathrm{~d}_{6} & \mathrm{~d}_{7} & \mathrm{~d}_{8} \\
\mathrm{~d}_{9} & \mathrm{~d}_{10} & \mathrm{~d}_{11} & \mathrm{~d}_{12} \\
\mathrm{~d}_{13} & \mathrm{~d}_{14} & \mathrm{~d}_{15} & \mathrm{~d}_{16}
\end{array}\right]\right.\right.
$$

$$
\text { with } \left.\mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{19}(10),{ }^{*}, 1 \leq \mathrm{j} \leq 16\right\}
$$

be a non associative quasi linear algebra over the field $\mathrm{Z}_{19}$ which is commutative matrix polynomial coefficient quasi linear algebra over $\mathrm{Z}_{19}$.

Take T : $\mathrm{P} \rightarrow \mathrm{P}$ defined by

$$
P\left(\sum_{i=0}^{\infty} a_{i} x^{i}\right)=\sum_{i=0}^{\infty} a_{i}^{t} x^{i} \text { where }
$$

$$
\mathrm{a}_{\mathrm{i}}^{\mathrm{t}}=\left[\begin{array}{cccc}
\mathrm{d}_{1} & \mathrm{~d}_{2} & \mathrm{~d}_{3} & \mathrm{~d}_{4} \\
\mathrm{~d}_{5} & \mathrm{~d}_{6} & \mathrm{~d}_{7} & \mathrm{~d}_{8} \\
\mathrm{~d}_{9} & \mathrm{~d}_{10} & \mathrm{~d}_{11} & \mathrm{~d}_{12} \\
\mathrm{~d}_{13} & \mathrm{~d}_{14} & \mathrm{~d}_{15} & \mathrm{~d}_{16}
\end{array}\right]^{\mathrm{t}}=\left[\begin{array}{cccc}
\mathrm{d}_{1} & \mathrm{~d}_{5} & \mathrm{~d}_{9} & \mathrm{~d}_{13} \\
\mathrm{~d}_{2} & \mathrm{~d}_{6} & \mathrm{~d}_{10} & \mathrm{~d}_{14} \\
\mathrm{~d}_{3} & \mathrm{~d}_{7} & \mathrm{~d}_{11} & \mathrm{~d}_{15} \\
\mathrm{~d}_{4} & \mathrm{~d}_{8} & \mathrm{~d}_{12} & \mathrm{~d}_{16}
\end{array}\right]
$$

for every square matrix $a_{i}$. $T$ is easily verified to be a linear operator on P .

Example 3.38: Let

$$
P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
d_{1} & d_{2} & \ldots & d_{8} \\
d_{9} & d_{10} & \ldots & d_{16}
\end{array}\right]\right., d_{j} \in L_{11}(6), *, 1 \leq j \leq 16\right\}
$$

be a non associative quasi linear algebra over the field $\mathrm{Z}_{11}$. Clearly P is commutative.

$$
M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}
d & d & \ldots & d \\
d & d & \ldots & d
\end{array}\right] d \in L_{11}(6)\right., *\right\} \subseteq P
$$

is a matrix coefficient polynomial non associative quasi linear subalgebra of P over $\mathrm{Z}_{11}$.

Now we proceed onto define Smarandache non associative linear algebras.

DEFINITION 3.2: Let $V$ be a loop suppose $V$ is such that for a $S$-ring $R$ we have the following conditions to be true.
(i) For all $r \in R$ and $v \in V r v$ and $v r \in V$.
(ii) $l \in R$ and $\forall v \in V 1 . v=v \in V$.

$$
\begin{aligned}
& \text { (iii) }(a+b) v=a v+b v \text { and } a\left(v^{*} u\right)=(a v) * u=v *(a u) \\
& \quad \text { for all } a \in R \text { and } u, v \in V .
\end{aligned}
$$

Then we define $V$ to be a Smarandache non associative linear algebra over the $S$-ring $R$.

We will illustrate this situation by some examples.
Example 3.39: Let $\mathrm{V}=\left\{\mathrm{L}_{15}\right.$ (8), * $\}$ be a S-non associative linear algebra over the S -ring $\mathrm{Z}_{15}$.

Example 3.40: Let $S=\left\{\mathrm{L}_{21}(11),{ }^{*}\right\}$ is a S -non associative linear algebra over the S -ring $\mathrm{Z}_{21}$.

Example 3.41: Let $\mathrm{P}=\left\{\mathrm{L}_{33}\right.$ (14), * $\}$ be a S-non associative linear algebra over the S -ring $\mathrm{Z}_{33}$.

We see if $\mathrm{g}_{5}, \mathrm{~g}_{25} \in \mathrm{P}$.
$\mathrm{g}_{5} * \mathrm{~g}_{25}=\mathrm{g}_{(25 \times 14-5 \times 13) \bmod 33}=\mathrm{g}_{21}$
$\mathrm{g}_{25} * \mathrm{~g}_{5}=\mathrm{g}_{(5 \times 14-25 \times 13) \bmod 33}=\mathrm{g}_{32}$
Clearly $\mathrm{g}_{25} * \mathrm{~g}_{5} \neq \mathrm{g}_{5} * \mathrm{~g}_{25}$; hence the S-non associative linear algebra is non commutative.

Suppose $10 \in Z_{33}$ now $10 g_{5}=g_{50(\bmod 33)}=g_{17}$.
Infact $20 \mathrm{ge}=\mathrm{g}_{20}$ that is for $\mathrm{a} \in \mathrm{Z}_{33}$ a.ge $=\mathrm{ga}$.
Also $0 . \mathrm{g}_{\mathrm{t}}=\mathrm{g}_{0 . \mathrm{t}(\bmod 33)}=\mathrm{g}_{0}$.
Example 3.42: Let $\mathrm{M}=\left\{\mathrm{L}_{57}\right.$ (23), * $\}$ is a S -non associative linear algebra over the S -ring $\mathrm{Z}_{57}$.

Now the study the substructure in S-non associative linear algebras is a matter of routines, hence is left as an exercise to the reader.

However we now built different S-non associative linear algebras over S-rings, which will be illustrated by some examples.

Example 3.43: Let $\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{57}(32) ; 1 \leq \mathrm{i} \leq 3\right.$, * $\}$ be a S-non associative row matrix linear algebra over the S-ring $\mathrm{Z}_{57}$. Take $\mathrm{P}=\left\{(\mathrm{a}, \mathrm{a}, \mathrm{a}) \mid \mathrm{a} \in \mathrm{L}_{57}(32), *\right\} \subseteq \mathrm{V}$ is a S -non associative row matrix linear subalgebra of V over the S -ring $Z_{57}$.

Example 3.44: Let $\mathrm{P}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}, \mathrm{a}_{5}\right)\right.$ where $\mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{15}(8)$, $1 \leq \mathrm{i} \leq 5, *\}$ be a S -non associative row matrix linear algebra over the S -ring $\mathrm{Z}_{15}$.

Example 3.45: Let $M=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{10}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{57}(23), 1 \leq \mathrm{i} \leq\right.$ $10, *\}$ be a S-non associative row matrix linear algebra over the S-ring $\mathrm{Z}_{57}$.

We see it is not easy to find sublinear algebras such that M is a direct sum.

However we have S non associative sublinear algebras. Further we can define linear transformation in case of two Snon associative sublinear algebras only if they are defined over the same S -ring.

We give illustrations of these.
Example 3.46: Let $\mathrm{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{15}(8),{ }^{*}, 1 \leq \mathrm{i} \leq\right.$ 4\} be a S-non associative row matrix linear algebra over the Sring $\mathrm{Z}_{15}$.

Example 3.47: Let

$$
\mathrm{T}=\left\{\left[\begin{array}{c}
\mathrm{d}_{1} \\
\mathrm{~d}_{2} \\
\vdots \\
\mathrm{~d}_{10}
\end{array}\right] \text { where } \mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{51}(14), 1 \leq \mathrm{j} \leq 10, *\right\}
$$

be a S-non associative column matrix linear algebra over the Sring $\mathrm{Z}_{51}$.

## Example 3.48: Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{c}
\mathrm{m}_{1} \\
\mathrm{~m}_{2} \\
\vdots \\
\mathrm{~m}_{6}
\end{array}\right] \right\rvert\, \mathrm{m}_{\mathrm{j}} \in \mathrm{~L}_{69}(11), 1 \leq \mathrm{j} \leq 6, *\right\}
$$

be a S-non associative column matrix linear algebra over the Sring $\mathrm{Z}_{69}$.

## Example 3.49: Let

$$
P=\left\{\left.\left[\begin{array}{l}
d_{1} \\
d_{2} \\
d_{3}
\end{array}\right] \right\rvert\, d_{j} \in L_{87}(26), 1 \leq j \leq 3, *\right\}
$$

be a S-non associative column matrix linear algebra over the Sring $\mathrm{Z}_{87}$.

## Example 3.50: Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{c}
\mathrm{d}_{1} \\
\mathrm{~d}_{2} \\
\vdots \\
\mathrm{~d}_{7}
\end{array}\right] \right\rvert\, \mathrm{d}_{\mathrm{j}} \in \mathrm{~L}_{21}(20), 1 \leq \mathrm{j} \leq 7, *\right\}
$$

be a S-non associative column matrix linear algebra over the Sring $\mathrm{Z}_{21}$.

Now we give some examples of S-non associative matrix linear algebras over the S-ring.

## Example 3.51: Let

$$
M=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{j} \in L_{15}(8), 1 \leq j \leq 16, *\right\}
$$

be a S-non associative column matrix linear algebra over the $S$ ring $\mathrm{Z}_{15}$.

Clearly M is commutative.
Example 3.52: Let

$$
M=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in L_{57}(8), 1 \leq i \leq 30, *\right\}
$$

be a S-non associative matrix linear algebra over the S-ring $\mathrm{Z}_{57}$.
Example 3.53: Let
be a S-non associative matrix linear algebra over the S -ring $\mathrm{Z}_{15}$.

## Example 3.54: Let

$$
V=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in L_{57}(8), 1 \leq i \leq 12, *\right\}
$$

be a S-non associative matrix linear algebra over the S-ring $\mathrm{Z}_{57}$.

## Example 3.55: Let

$$
M=\left\{\left(a_{1}, a_{2}, \ldots, a_{9}\right) \text { where } a_{j} \in L_{111}(11), 1 \leq j \leq 9, *\right\}
$$

and

$$
V=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{111}(8) ; 1 \leq i \leq 9, *\right\}
$$

be two S-non associative matrix linear algebra over the S-ring $\mathrm{Z}_{111}$.

Consider T : M $\rightarrow$ V be a map such that

$$
T\left(\left(a_{1}, a_{2}, \ldots, a_{9}\right)\right)=\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right]
$$

T is a linear transformation from M to V .

## Example 3.56: Let

$$
\mathrm{V}=\left\{\mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{15}(8) ; 1 \leq \mathrm{i} \leq 12, *\right\}
$$

be a S-non associative matrix linear algebra over the S -ring $\mathrm{Z}_{15}$.

Consider a map $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{V}$ defined by

$$
\mathrm{T}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8} & a_{9} \\
\mathrm{a}_{10} & a_{11} & a_{12}
\end{array}\right]\right)=\left[\begin{array}{ccc}
a_{12} & a_{11} & a_{10} \\
a_{9} & a_{8} & a_{7} \\
a_{6} & a_{5} & a_{4} \\
a_{3} & a_{2} & a_{1}
\end{array}\right] .
$$

T is a linear operator on V .
Example 3.57: Let

$$
\left.\left.V=\left\{\begin{array}{llll}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30} \\
a_{31} & a_{32} & \ldots & a_{40}
\end{array}\right] \right\rvert\, a_{i} \in L_{33}(17) ; 1 \leq i \leq 40, *\right\}
$$

is a S-non associative matrix linear algebra over the S -ring $\mathrm{Z}_{33}$.
Let

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & \ldots & a_{20} \\
\mathrm{a}_{21} & a_{22} & \ldots & a_{40}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{33}(20) ; 1 \leq \mathrm{i} \leq 40, *\right\}
$$

be a S-non associative matrix linear algebra over the S -ring $\mathrm{Z}_{33}$.
Define $\eta: V \rightarrow W$;

$$
\eta\left(\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30} \\
a_{31} & a_{32} & \ldots & a_{40}
\end{array}\right]\right)=\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{40}
\end{array}\right] .
$$

$\eta$ is a linear transformation from V into W .
Now all other properties associated with non associative linear algebras can be defined and derived with simple operations.

## Groupoid Vector Spaces

In this chapter we introduced some new concepts called groupoid vector spaces, loop vector spaces and quasi loop vector spaces. We study and analyse these notions in this chapter by examples and results.

DEFINITION 4.1: Let $V$ be a set and $G$ a groupoid under a binary operation *. We say $V$ is a groupoid vector space over the groupoid $G$ if the following conditions are true;
(i) For all $v \in V$ and $g \in G$, $g v=v g \in V$.
(ii) $\left(g_{1} * g_{2}\right) v=g_{1} v * g_{2} v$ for all $g_{1}, g_{2} \in G$ and $v \in V$.

We will illustrate this situation by some examples.
Example 4.1: Let V = \{3Z, 5Z, 7Z $\}$ be a set. $G=\{Z, *,(9,4)\}$ be a groupoid. V is a groupoid vector space over the groupoid G.

Example 4.2: Let $\mathrm{W}=\{5 \mathrm{Z}, 8 \mathrm{Z}, 23 \mathrm{Z}, 11 \mathrm{Z}\}$ be a set. $\mathrm{G}=\left\{\mathrm{Z},{ }^{*}\right.$, $(0,12)\}$ be a groupoid. V is a groupoid vector space over the groupoid G.

Example 4.3: Let $\mathrm{M}=\left\{18 \mathrm{Z}^{+} \cup\{0\}, 29 \mathrm{Z}^{+} \cup\{0\}, 17 \mathrm{Z}^{+} \cup\{0\}\right\}$ be a set and $\mathrm{G}=\left\{\mathrm{Z}^{+} \cup\{0\},^{*},(13,13)\right\}$ be a groupoid. M is a groupoid vector space over the groupoid G .

Example 4.4: Let $\mathrm{S}=\{3 \mathrm{Z}, 5 \mathrm{Z}, 17 \mathrm{Z}, 29 \mathrm{Z}, 43 \mathrm{Z}\}$ be a set. $\mathrm{G}=\left\{\mathrm{Z},{ }^{*},(17,19)\right\}$ be a groupoid. S is a groupoid vector space over the groupoid G.

All these groupoid vector spaces are of infinite dimension. We will show now groupoid vector space of matrices.

Example 4.5: Let $\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right),\left(\mathrm{a}_{1}, \mathrm{a}_{2}\right),\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}, \mathrm{a}_{5}, \mathrm{a}_{6}\right)\right.$ $\left.l a_{i} \in 3 Z \cup 5 Z \cup 7 Z\right\}$ be a set. $G=\{Z, *,(29,0)\}$ be groupoid. W is a groupoid vector space of matrices.

Example 4.6: Let

$$
\begin{gathered}
R=\left\{\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3}
\end{array}\right],\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{10}\right) \mid a_{i} \in 2 Z \cup 5 Z \cup 7 Z,\right. \\
1 \leq i \leq 10\}
\end{gathered}
$$

be a set and $\mathrm{G}=\{\mathrm{Z}, *,(3,17)\}$ be a groupoid. R is a groupoid vector space of matrices.

## Example 4.7: Let

$$
\text { W }=\left\{\begin{array}{c}
{\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right],\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{25} & a_{26}
\end{array}\right], \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & \ldots & \ldots & a_{8} \\
a_{9} & \ldots & \ldots & a_{12} \\
a_{13} & \ldots & \ldots & a_{16}
\end{array}\right] \right\rvert\,} \\
\left.a_{i} \in Z, 1 \leq i \leq 26\right\}
\end{array}\right.
$$

be a set of some matrices. $\mathrm{G}=\{\mathrm{Z}, *,(3,2)\}$ be a groupoid. W is a groupoid vector space of matrices.

Example 4.8: Let

$$
M=\left\{\left(a_{1}, a_{2}, \ldots, a_{10}\right),\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{8}
\end{array}\right], \left.\left[\begin{array}{ccc}
a_{1} & \ldots & a_{16} \\
a_{17} & \ldots & a_{32}
\end{array}\right] \right\rvert\, a_{i} \in Z ; 1 \leq i \leq 32\right\}
$$

be a set of matrices. $\mathrm{G}=\left\{\mathrm{Z},{ }^{*},(10,11)\right\}$ be a groupoid; M is groupoid vector space over the groupoid $G$. We can define subgroupoids vector subspaces and groupoid vector subspaces, this is a matter of routine.

We will illustrate this situation by some examples.
Example 4.9: Let

$$
\begin{gathered}
P=\left\{\left(a_{1}, a_{2}, \ldots, a_{16}\right),\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{18}
\end{array}\right],\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right], \left.\left(\begin{array}{ccc}
a_{1} & \ldots & a_{9} \\
a_{10} & \ldots & a_{18} \\
a_{19} & \ldots & a_{27}
\end{array}\right) \right\rvert\,\right. \\
\left.a_{i} \in Z ; 1 \leq i \leq 27\right\}
\end{gathered}
$$

be a set of matrices. $\mathrm{G}=\{\mathrm{Z}, *,(2,13)\}$ be a groupoid. P is groupoid vector space over G.

$$
X=\left\{\left(a_{1}, a_{2}, \ldots, a_{16}\right), \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{18}
\end{array}\right] \right\rvert\, a_{i} \in Z ; 1 \leq i \leq 18\right\} \subseteq P
$$

is a groupoid vector subspace of P over G .

$$
M=\left\{\left(a_{1}, a_{2}\right),\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right], \left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{19} & a_{20}
\end{array}\right] \right\rvert\, a_{i} \in Z, 1 \leq i \leq 20\right\}
$$

be a groupoid vector space over the groupoid $\mathrm{G}=\left\{\mathrm{Z},{ }^{*},(7,0)\right\}$.
Consider

$$
\mathrm{Y}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}\right), \left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{19} & a_{20}
\end{array}\right] \right\rvert\, a_{i} \in Z, 1 \leq i \leq 20\right\} \subseteq M,
$$

Y is a groupoid vector space over the groupoid $\mathrm{H}=\{7 \mathrm{Z}, *$, $(7,0)\} \subseteq G$.

Infact Y is a subgroupoid vector subspace of M over the subgroupoid H of M .

Example 4.11: Let

$$
\begin{aligned}
& P=\left\{\begin{array}{l}
{\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{6} \\
a_{7} & a_{8} & \ldots & a_{12} \\
a_{13} & a_{14} & \ldots & a_{18}
\end{array}\right],\left(\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right),} \\
\left.\left(a_{1}, a_{2}, \ldots, a_{11}\right) \mid a_{i} \in Z ; 1 \leq i \leq 18\right\}
\end{array},=103\right.
\end{aligned}
$$

be a groupoid vector space of matrices over the groupoid $\mathrm{G}=\{\mathrm{Z}, *,(17,17)\}$.

Consider

$$
M=\left\{\left(\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right),\left(a_{1}, a_{2}, \ldots, a_{11}\right) \mid a_{i} \in Z ; 1 \leq i \leq 11\right\} \subseteq P
$$

M is a subgroupoid vector subspace of P over the subgroupoid $\mathrm{H}=\{3 \mathrm{Z}, *,(17,17)\} \subseteq \mathrm{G}$.

Now we proceed onto give example of finite groupoid vector space defined over the groupoid G.

Example 4.12: Let

$$
V=\left\{\left(a_{1}, a_{2}\right),\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right], \left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3}
\end{array}\right] \right\rvert\, a_{i} \in Z_{9} ; 1 \leq i \leq 6\right\}
$$

be a groupoid vector space of matrices over the groupoid $\mathrm{G}=$ $\left\{Z_{9},{ }^{*},(7,2)\right\}$.

Example 4.13: Let

$$
\begin{gathered}
\mathbf{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{7}\right),\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
a_{10}
\end{array}\right],\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{9} \\
\mathrm{a}_{10} & a_{11} & \ldots & a_{18} \\
a_{19} & a_{20} & \ldots & a_{27}
\end{array}\right],\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right]\right. \\
\left.\mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{19} ; 1 \leq i \leq 27\right\}
\end{gathered}
$$

be a groupoid vector space of matrices over the groupoid

$$
\begin{gathered}
G=\left\{Z_{19}, *,(12,9)\right\} . \\
P=\left\{\left(a_{1}, a_{2}, \ldots, a_{7}\right), \left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in Z_{19} ; 1 \leq i \leq 7\right\}
\end{gathered}
$$

be a groupoid vector subspace of matrices over the groupoid $G=\left\{Z_{19},{ }^{*},(12,9)\right\}$.

## Example 4.14: Let

$$
\begin{aligned}
& \mathrm{W}=\left\{\begin{array}{llll}
\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & \mathrm{a}_{7} \\
\mathrm{a}_{8} & \mathrm{a}_{9} & \ldots & \mathrm{a}_{14}
\end{array}\right],\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
\mathrm{a}_{28} & a_{29} & a_{30}
\end{array}\right], \\
& \left.\left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & \ldots & a_{5} \\
\mathrm{a}_{6} & a_{7} & \ldots & a_{10} \\
\mathrm{a}_{11} & a_{12} & \ldots & a_{15} \\
\mathrm{a}_{16} & a_{17} & \ldots & a_{20} \\
\mathrm{a}_{21} & a_{22} & \ldots & a_{25}
\end{array}\right] \right\rvert\, \quad a_{i} \in Z_{240} ; 1 \leq i \leq 30\right\}
\end{aligned}
$$

be a groupoid vector space of matrices over the groupoid $\mathrm{G}=$ $\left\{\mathrm{Z}_{240}\right.$, *, $\left.(11,19)\right\}$.

$$
\begin{gathered}
\mathrm{T}=\left\{\begin{array}{llll}
\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & a_{7} \\
\mathrm{a}_{8} & a_{9} & \ldots & a_{14}
\end{array}\right], \left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & \ldots & a_{5} \\
a_{6} & a_{7} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{15} \\
a_{16} & a_{17} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{25}
\end{array}\right] \right\rvert\, a_{i} \in Z_{240} ; \\
1 \leq i \leq 25\} \subseteq W ;
\end{gathered}
$$

be a groupoid vector subspace of matrices over the groupoid $G=\left\{Z_{240},{ }^{*},(11,19)\right\}$.

Example 4.15: Let

$$
\begin{aligned}
& M=\left\{\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
\vdots & \vdots & \vdots & \vdots \\
a_{37} & a_{38} & a_{39} & a_{40}
\end{array}\right],\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right],\right. \\
& \left.\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in Z_{43} ; 1 \leq i \leq 40\right\}
\end{aligned}
$$

be a groupoid vector space of matrices over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{43}, *,(20,23)\right\}$.
$T=\left\{\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right], \left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30}\end{array}\right] \right\rvert\, a_{i} \in Z_{43} ; 1 \leq i \leq 43\right\}$
$\subseteq \mathrm{M}$; be a groupoid vector subspace of matrices over the groupoid G.

We see $\mathrm{M}=\mathrm{P}+\mathrm{T}$ and $\mathrm{P} \cap \mathrm{T}=\phi$ that is M is a direct sum of subspaces over the groupoid G .

Example 4.16: Let

$$
M=\left\{\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{5} & a_{4} \\
a_{5} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11}
\end{array} a_{12}\right],\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],
$$

$$
\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30} \\
a_{31} & a_{32} & \ldots & a_{40}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{40}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{15}\right) \mid a_{i} \in Z_{45} ; 1 \leq i \leq 40\right\}
$$

be a groupoid vector space of matrices over the groupoid $G=\left\{Z_{45}, *,(11,0)\right\}$.

Take

$$
\left.\begin{array}{c}
P_{1}=\left\{\begin{array}{c}
\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right], \left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in Z_{45} ; 1 \leq i \leq 12\right\} \subseteq M
\end{array}\right. \\
P_{2}=\left\{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{15}\right) \mid a_{i} \in Z_{45} ; 1 \leq i \leq 15\right\} \subseteq M
\end{array}\right\} \begin{aligned}
& \left.P_{3}=\left\{\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{40}
\end{array}\right] \right\rvert\, a_{i} \in Z_{45} ; 1 \leq i \leq 40\right\} \subseteq M
\end{aligned}
$$

and
$P_{4}=\left\{\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right], \left.\left[\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30} \\ a_{31} & a_{32} & \ldots & a_{40}\end{array}\right] \right\rvert\, a_{i} \in Z_{45} ; 1 \leq i \leq 40\right\} \subseteq M$
be a groupoid vector subspaces of $M$ over the groupoid.

$$
\text { We see } P_{i} \cap P_{j}=\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], 1 \leq i, j \leq 4 ; i \neq j \text {. }
$$

Clearly $\mathrm{M} \subseteq \mathrm{P}_{1}+\mathrm{P}_{2}+\mathrm{P}_{3}+\mathrm{P}_{4}$. Thus M is a pseudo direct sum of groupoid vector subspaces of M over the groupoid G .

Example 4.17: Let

$$
\mathrm{V}=\left\{\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & \mathrm{a}_{6}
\end{array}\right],\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{12}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{425} ;\right.
$$

$$
1 \leq \mathrm{i} \leq 30\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{425},{ }^{*}\right.$, $(11,19)\}$.

$$
\begin{gathered}
M_{1}=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right] \right\rvert\, a_{i} \in Z_{425} ; 1 \leq i \leq 6\right\} \subseteq V, \\
\left.\left.M_{2}=\left\{\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in Z_{425} ; 1 \leq i \leq 30\right\} \subseteq V,
\end{gathered}
$$

and $\mathrm{M}_{3}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{12}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{425} ; 1 \leq \mathrm{i} \leq 12\right\} \subseteq \mathrm{V}$ be groupoid vector subspaces of V over the groupoid G .

Clearly $\mathrm{M}_{\mathrm{i}} \cap \mathrm{M}_{\mathrm{j}}=\phi ; 1 \leq \mathrm{i}, \mathrm{j} \leq 3$ if $\mathrm{i} \neq \mathrm{j}$.
Further $\mathrm{M}_{1}+\mathrm{M}_{2}+\mathrm{M}_{3}=\mathrm{V}$. Thus V is a direct sum of groupoid vector subspaces of V over the groupoid G .

We now as in case of usual structures define groupoid linear algebra over the groupoid G .

We say a groupoid vector space V over the groupoid G is a groupoid linear algebra if V is closed under some operation.

We illustrate this by the following examples.

## Example 4.18: Let

$$
V=\left\{\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in Z_{45} ; *,(12,0), 1 \leq i \leq 12\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{45}, *\right.$, (12, $0)\}$. Since V is a groupoid under *; so $\left(\mathrm{V},{ }^{*}\right)$ is a groupoid linear algebra over the groupoid G .

## Example 4.19: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in Z_{25} ; *,(21,4), 1 \leq i \leq 30\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{25}, *,(21\right.$, 4) $\}$.

## Example 4.20: Let

$$
M=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{19}
\end{array}\right] \right\rvert\, a_{i} \in Z_{18} ; *,(11,7), 1 \leq i \leq 19\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{18}, *\right.$, $(11,7)\}$.

Example 4.21: Let

$$
V=\left\{\left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in Z_{182} ; *,(3,13), 1 \leq i \leq 4\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{182},{ }^{*}\right.$, $(3,13)\}$.

Example 4.22: Let
$\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{19}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{53} ; *,(22,31), 1 \leq \mathrm{i} \leq 19\right\}$ be a groupoid linear algebra over the groupoid $G=\left\{\mathrm{Z}_{53},{ }^{*},(22,31)\right\}$.

We have the following theorem.
THEOREM 4.1: Let $V$ be a groupoid linear algebra over the groupoid $G$. V is a groupoid vector space over the groupoid $G$. But a groupoid vector space V over the groupoid $G$ in general is not a groupoid linear algebra over $G$.

The proof is direct and hence is left as an exercise to the reader. We now give examples of groupoid linear subalgebra of a groupoid linear algebra.

Example 4.23: Let

$$
V=\left\{\left.\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in Z_{16} ; *,(3,7), 1 \leq i \leq 4\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{16}, *\right.$, (3, 7) $\}$.

$$
\mathrm{W}=\left\{\left.\left[\begin{array}{ll}
\mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a}
\end{array}\right] \right\rvert\, \mathrm{a} \in \mathrm{Z}_{16} ; *,(3,7)\right\} \subseteq \mathrm{V},
$$

$W$ is a groupoid linear algebra over the groupoid $G=\left\{Z_{16}, *,(3\right.$, 7) \}.

## Example 4.24: Let

$$
\mathrm{V}=\left\{\left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
\vdots & \vdots & \vdots & \vdots \\
a_{37} & a_{38} & a_{39} & a_{40}
\end{array}\right] \right\rvert\, a_{i} \in Z_{27}, *,(17,0), 1 \leq i \leq 40\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{27}, *\right.$, (17, $0)\}$.

Consider

$$
\mathrm{M}=\left\{\left.\left[\begin{array}{cccc}
\mathrm{a} & \mathrm{a} & \mathrm{a} & \mathrm{a} \\
\mathrm{a} & \mathrm{a} & \mathrm{a} & \mathrm{a} \\
\vdots & \vdots & \vdots & \vdots \\
\mathrm{a} & \mathrm{a} & \mathrm{a} & \mathrm{a}
\end{array}\right] \right\rvert\, \mathrm{a} \in \mathrm{Z}_{27}, *,(17,0)\right\} \subseteq \mathrm{V},
$$

is a groupoid linear subalgebra of V over the groupoid G .

## Example 4.25: Let

$V=\left\{\left(a_{1}, a_{2}, \ldots, a_{16}\right) \mid a_{i} \in Z_{29}, *,(3,3), 1 \leq i \leq 16\right\}$ be a groupoid linear algebra over the groupoid $G=\left\{Z_{29},{ }^{*},(3,3)\right\}$.

Take $\mathrm{W}=\left\{(\mathrm{a}, \mathrm{a}, \ldots, \mathrm{a}) \mid \mathrm{a} \in \mathrm{Z}_{29},{ }^{*},(3,3)\right\}$ be a groupoid linear algebra over the groupoid G.

We can define transformation and linear operator on groupoid vector spaces (linear algebras).

Example 4.26: Let

$$
\begin{gathered}
V=\left\{\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8}
\end{array}\right],\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{10}\right) \mid a_{i} \in Z_{18}, \\
1 \leq i \leq 10\}
\end{gathered}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{18},{ }^{*}\right.$, (3, 7) $\}$.

$$
W=\left\{\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
a_{5} & a_{6} \\
a_{7} & a_{8}
\end{array}\right],\left(a_{1}, a_{2}, a_{3}, a_{4}\right), \left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{9} & a_{10}
\end{array}\right] \right\rvert\, a_{i} \in Z_{18}, 1 \leq i \leq 10\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{8}, *\right.$, $(3,7)\}$.

Define $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{W}$;

$$
\begin{gathered}
\mathrm{T}\left(\left[\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & a_{3} & a_{4} \\
\mathrm{a}_{5} & \mathrm{a}_{6} & a_{7} & \mathrm{a}_{8}
\end{array}\right]\right)=\left[\begin{array}{cc}
\mathrm{a}_{1} & a_{2} \\
\mathrm{a}_{3} & a_{4} \\
\mathrm{a}_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8}
\end{array}\right], \\
\mathrm{T}\left(\left[\begin{array}{ll}
\mathrm{a}_{1} & a_{2} \\
\mathrm{a}_{3} & a_{4}
\end{array}\right]\right)=\left(a_{1}, \mathrm{a}_{2}, a_{3}, a_{4}\right) \\
\mathrm{T}\left(\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{10}\right)\right)=\left[\begin{array}{ll}
\mathrm{a}_{1} & a_{2} \\
\mathrm{a}_{3} & a_{4} \\
\mathrm{a}_{5} & a_{6} \\
a_{7} & a_{8} \\
\mathrm{a}_{9} & a_{10}
\end{array}\right] .
\end{gathered}
$$

T is a linear transformation from V into W .

Example 4.27: Let

$$
\begin{aligned}
& V=\left\{\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{18}\right), \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
a_{21} & a_{22} & \ldots & a_{30} \\
a_{31} & a_{32} & \ldots & a_{40}
\end{array}\right] \right\rvert\,\right. \\
& \left.\mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{45}, 1 \leq \mathrm{i} \leq 40\right\}
\end{aligned}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{45},{ }^{*}\right.$, (7, 3) $\}$.

$$
\begin{gathered}
\text { Define } \mathrm{T}: \mathrm{V} \rightarrow \mathrm{~V} \text { by } \\
\mathrm{T}\left(\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8} & a_{9}
\end{array}\right]\right)=\left(\mathrm{a}_{1}, \mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{3}, \ldots, \mathrm{a}_{9}, \mathrm{a}_{9}\right) . \\
\mathrm{T}\left(\left[\begin{array}{llll}
\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & a_{10} \\
\mathrm{a}_{11} & a_{12} & \ldots & a_{20} \\
\mathrm{a}_{21} & a_{22} & \ldots & a_{30} \\
\mathrm{a}_{31} & a_{32} & \ldots & a_{40}
\end{array}\right]\right)=\left[\begin{array}{lll}
a_{1} & a_{12} & a_{15} \\
a_{30} & a_{20} & a_{10} \\
a_{25} & a_{35} & a_{40}
\end{array}\right] \\
\mathrm{T}\left(\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{18}\right)\right)=\left[\begin{array}{lll}
a_{1} & a_{3} & a_{5} \\
a_{7} & a_{9} & a_{11} \\
a_{13} & a_{15} & a_{17}
\end{array}\right] .
\end{gathered}
$$

T is a linear operator on V .

Example 4.28: Let

$$
M=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Z}_{40}, 1 \leq \mathrm{i} \leq 9, *,(11,11)\right\}
$$

and

$$
\mathrm{W}=\left\{\left.\left(\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\vdots \\
\mathrm{a}_{9}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{40}, 1 \leq \mathrm{i} \leq 9, *,(11,11)\right\}
$$

be two groupoid linear algebras over the groupoid $G=\left\{Z_{40}, *\right.$, $(11,11)\}$.

Define a map T: M $\rightarrow \mathrm{W}$ by

$$
\mathrm{T}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & \mathrm{a}_{8} & a_{9}
\end{array}\right]\right)=\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\vdots \\
\mathrm{a}_{9}
\end{array}\right] .
$$

T is a groupoid linear transformation of V into W over G .
Example 4.29: Let

$$
\mathrm{V}=\left\{\left\{\left.\left[\begin{array}{llll}
\mathrm{a}_{1} & a_{4} & a_{7} & a_{10} \\
\mathrm{a}_{2} & a_{5} & a_{8} & a_{11} \\
a_{3} & a_{6} & a_{9} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in Z_{143}, 1 \leq i \leq 12, *,(11,15)\right\}\right.
$$

be a groupoid linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{143}, *,(11\right.$, 15) $\}$.
$\mathrm{T}: \mathrm{V} \rightarrow \mathrm{V}$ be defined as

$$
\mathrm{T}\left(\left[\begin{array}{llll}
\mathrm{a}_{1} & a_{4} & a_{7} & a_{10} \\
\mathrm{a}_{2} & a_{5} & a_{8} & a_{11} \\
\mathrm{a}_{3} & a_{6} & a_{9} & a_{12}
\end{array}\right]\right)=\left[\begin{array}{llll}
a_{1} & a_{2} & a_{1} & a_{2} \\
a_{4} & a_{5} & a_{4} & a_{5} \\
a_{7} & a_{8} & a_{7} & a_{8}
\end{array}\right] ;
$$

T is a linear operator on V .

## Example 4.30: Let

$$
P=\left\{\left(a_{1}, a_{2}, \ldots, a_{40}\right) \mid a_{i} \in Z_{45}, 1 \leq i \leq 40, *,(3,0)\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{\mathrm{Z}_{45},{ }^{*}\right.$, (3, 0 ) $\}$. Define $\mathrm{f}: \mathrm{P} \rightarrow \mathrm{G}$ by

$$
f\left(\left(a_{1}, a_{2}, \ldots, a_{40}\right)\right)=a_{1} * a_{40} .
$$

$f$ is a linear functional on $P$.
Example 4.31: Let

$$
V=\left\{\left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{58} & a_{59} & a_{60}
\end{array}\right] \right\rvert\, a_{j} \in Z_{125}, 1 \leq j \leq 60, *,(23,0)\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{125}, *,(23\right.$, $0)$ \}.

$$
\begin{gathered}
\text { Define T : V } \rightarrow \text { V by } \\
\mathrm{T}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & \mathrm{a}_{6} \\
\vdots & \vdots & \vdots \\
\mathrm{a}_{58} & \mathrm{a}_{59} & \mathrm{a}_{60}
\end{array}\right]\right)=\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{1} & \mathrm{a}_{1} \\
\mathrm{a}_{4} & \mathrm{a}_{4} & \mathrm{a}_{4} \\
\vdots & \vdots & \vdots \\
\mathrm{a}_{58} & \mathrm{a}_{58} & \mathrm{a}_{58}
\end{array}\right] .
\end{gathered}
$$

T is a linear operator on V .

Define $\mathrm{f}: \mathrm{V} \rightarrow \mathrm{G}$.

$$
f\left(\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{58} & a_{59} & a_{60}
\end{array}\right]\right)=a_{1} * a_{60}
$$

F is a linear functional on V .
Example 4.32: Let

$$
\begin{gathered}
V=\left\{\begin{array}{c}
{\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{14}\right),\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{15}
\end{array}\right], \left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{16} & a_{17} & a_{18}
\end{array}\right] \right\rvert\, a_{i} \in Z_{49},} \\
1 \leq i \leq 18\}
\end{array}, .\right.
\end{gathered}
$$

be a groupoid vector space over the groupoid $\left\{\mathrm{Z}_{49},{ }^{*},(7,11)\right\}=$ G.

Define $\mathrm{f}: \mathrm{V} \rightarrow \mathrm{Z}_{49}$ by

$$
\begin{aligned}
& \mathrm{f}\left(\left[\begin{array}{cc}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & a_{4}
\end{array}\right]\right)=\mathrm{a}_{1} * \mathrm{a}_{4} \\
& \mathrm{f}\left(\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{11}\right)\right)=\mathrm{a}_{11} \\
& \mathrm{f}\left(\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
\mathrm{a}_{15}
\end{array}\right]\right)=\mathrm{a}_{10} * \mathrm{a}_{12}
\end{aligned}
$$

and

$$
\mathrm{f}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & \mathrm{a}_{6} \\
\vdots & \vdots & \vdots \\
\mathrm{a}_{16} & \mathrm{a}_{17} & a_{18}
\end{array}\right]\right)=\mathrm{a}_{1} * \mathrm{a}_{18}
$$

$f$ is a linear functional on $V$.
Take

$$
\begin{gathered}
\mathrm{W}_{1}=\left\{\left.\left[\begin{array}{cc}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & \mathrm{a}_{4}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{49}, 1 \leq \mathrm{i} \leq 4\right\} \subseteq \mathrm{V}, \\
\mathrm{~W}_{2}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{11}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{49}, 1 \leq \mathrm{i} \leq 11\right\} \subseteq \mathrm{V}, \\
\mathrm{~W}_{3}=\left\{\begin{array}{c}
\left.\left.\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
\mathrm{a}_{15}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{49}, 1 \leq \mathrm{i} \leq 15\right\} \subseteq \mathrm{V}
\end{array}\right.
\end{gathered}
$$

and

$$
\left.\left.\mathrm{W}_{4}=\left\{\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{16} & a_{17} & a_{18}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Z}_{49}, 1 \leq \mathrm{i} \leq 18\right\} \subseteq \mathrm{V}
$$

be groupoid vector subspaces of V over the groupoid G .
Clearly $\mathrm{V}=\mathrm{W}_{1}+\mathrm{W}_{2}+\mathrm{W}_{3}+\mathrm{W}_{4}$ and $\mathrm{W}_{\mathrm{i}} \cap \mathrm{W}_{\mathrm{j}}=\phi ; \mathrm{i} \neq \mathrm{j}$, $1 \leq \mathrm{i}, \mathrm{j} \leq 4$.

Now we see V is the direct sum of groupoid vector subspaces of V over the groupoid G .

We can also define the notion of groupoid vector spaces and groupoid linear algebras over the groupoid G. This is a matter
of routine and hence left as an exercise to the reader. We supply only examples.

Example 4.33: Let

$$
V=\left\{\sum_{i=0}^{7} a_{i} x^{i}, \sum_{i=12}^{45} a_{i} x^{i}, \sum_{i=40}^{200} a_{i} x^{i}, \sum_{i=208}^{300} a_{i} x^{i} \mid a_{i} \in Z_{47}, 0 \leq i \leq 300\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{47}, *\right.$, (3, 4) $\}$.

This is known as the groupoid vector space of polynomials.
Example 4.34: Let

$$
M=\left\{\sum_{i=0}^{20} a_{i} x^{i}, \sum_{i=40}^{49} a_{i} x^{i} \mid a_{i} \in Z_{73}, 0 \leq i \leq 49\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{73},{ }^{*}\right.$, ( 0 , 49) $\}=G$.

Example 4.35: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=2}^{7} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}}, \sum_{\mathrm{i}=9}^{27} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{48}, 0 \leq \mathrm{i} \leq 27\right\}
$$

be a groupoid vector space of polynomials over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{48},{ }^{*},(29,0)\right\}$.

Example 4.36: Let

$$
\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{19}, *,(7,2)\right\}
$$

be a groupoid linear algebra of polynomials over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{19}, *,(7,2)\right\}$.

Example 4.37: Let

$$
\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{7}, *,(4,0)\right\}
$$

be a groupoid linear algebra polynomial over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{7},{ }^{*},(4,0)\right\}$.

We now proceed onto give examples of substructures.

## Example 4.38: Let

$$
V=\left\{\sum_{i=0}^{20} a_{i} x^{i}, \sum_{i=40}^{90} a_{i} x^{i}, \sum_{i=98}^{200} a_{i} x^{i} \mid a_{i} \in Z_{17}\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{17}, *\right.$, (11, 7) $\}$.

Take

$$
\begin{aligned}
& \mathrm{P}_{1}=\left\{\sum_{\mathrm{i}=0}^{20} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{17}\right\} \subseteq \mathrm{V}, \\
& \mathrm{P}_{2}=\left\{\sum_{\mathrm{i}=40}^{90} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{17}\right\} \subseteq \mathrm{V}
\end{aligned}
$$

and

$$
\mathrm{P}_{3}=\left\{\sum_{\mathrm{i}=98}^{200} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{17}\right\} \subseteq \mathrm{V}
$$

be a groupoid vector subspaces of polynomials over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{17},{ }^{*},(11,7)\right\}$. Clearly $\mathrm{V}=\mathrm{P}_{1}+\mathrm{P}_{2}+\mathrm{P}_{3}$ is a direct sum of subspaces of V .

Example 4.39: Let

$$
V=\left\{\sum_{i=0}^{3} a_{i} x^{i}, \sum_{i=7}^{12} a_{i} x^{i}, \sum_{i=20}^{26} a_{i} x^{i}, \sum_{i=100}^{120} a_{i} x^{i} \mid a_{i} \in Z_{420}\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{Z_{420},{ }^{*}\right.$, (3, 43) \}.

Take

$$
\begin{aligned}
& M_{1}=\left\{\sum_{i=0}^{3} a_{i} x^{i}, \sum_{i=7}^{12} a_{i} x^{i} \mid a_{i} \in Z_{420}\right\} \subseteq V, \\
& M_{2}=\left\{\sum_{i=0}^{3} a_{i} x^{i}, \sum_{i=20}^{26} a_{i} x^{i} \mid a_{i} \in Z_{420}\right\} \subseteq V, \\
& M_{3}=\left\{\sum_{i=0}^{3} a_{i} x^{i}, \sum_{i=100}^{120} a_{i} x^{i} \mid a_{i} \in Z_{420}\right\} \subseteq V
\end{aligned}
$$

be groupoid vector subspaces of V over the groupoid G .

$$
\mathrm{M}_{\mathrm{i}} \cap \mathrm{M}_{\mathrm{j}}=\left\{\sum_{\mathrm{i}=0}^{3} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{420}\right\} \text { if } \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq 3 .
$$

Further $V \subseteq M_{1}+M_{2}+M_{3}$ is the pseudo direct sum of groupoid vector subspaces of V over G .

Example 4.40: Let

$$
M=\left\{\sum_{i=0}^{13} a_{i} x^{i}, \sum_{i=20}^{43} a_{i} x^{i}, \sum_{i=50}^{70} a_{i} x^{i}, \sum_{i=76}^{100} a_{i} x^{i}, \sum_{i=120}^{140} a_{i} x^{i} \mid a_{i} \in Z_{421}\right\}
$$

be a groupoid vector space over the groupoid $G=\left\{\mathrm{Z}_{421},{ }^{*},(143\right.$, $0)$ \}.

The reader is left with the task of finding direct sum, pseudo direct sum, linear operator and linear functional on M .

Now we can define in a similar way groupoid linear algebras over a groupoid G.

## Example 4.41: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{47}, *,(19,0)\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{47},{ }^{*}\right.$, (19, $0)\}$.

Example 4.42: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{14}, *,(2,2)\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{14}, *\right.$, (2, 2) $\}$.

## Example 4.43: Let

$$
\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{23}, *,(7,6)\right\}
$$

be a groupoid linear algebra over the groupoid $G=\left\{Z_{23},{ }^{*}\right.$, (7, 6) $\}$.

Now we can use instead of these groupoid $G=\left\{Z_{n},{ }^{*}\right.$, ( $t$, u) $\}$, the complex groupoids
$\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{\mathrm{n}}\right), *,(\mathrm{t}, \mathrm{u})\right.$ with $\mathrm{i}_{\mathrm{F}}^{2}=\mathrm{n}-1$ where $\mathrm{C}\left(\mathrm{Z}_{\mathrm{n}}\right)=$ $\left.\left\{a+b i_{F} \mid a, b \in Z_{n}\right\}\right\}$.

We will only illustrate this situation by a few examples. When complex groupoids are used we call these groupoid vector spaces as complex groupoid vector spaces.

Example 4.44: Let $\mathrm{V}=\left\{\mathrm{C}\left(\mathrm{Z}_{29},{ }^{*},(7,3)\right\}\right.$ be a strong complex groupoid linear algebra $\mathrm{C}\left(\mathrm{Z}_{29}\right)=\left\{\mathrm{a}+\mathrm{bi}_{\mathrm{F}} \mid \mathrm{i}_{\mathrm{F}}^{2}=28,{ }^{*},(7,3)\right\}$.

Note if $\mathrm{C}\left(\mathrm{Z}_{29}\right)$ is replaced just by the groupoid $\mathrm{G}=\left(\mathrm{Z}_{29}\right.$, , , $(7,3)\}$ we call V only a complex linear algebra over the groupoid G.

Example 4.45: Let

$$
\begin{gathered}
\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right),\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4}
\end{array}\right], \left.\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{C}\left(\mathrm{Z}_{24}\right), i_{F}^{2}=23,\right. \\
1 \leq i \leq 9\}
\end{gathered}
$$

be a groupoid complex vector space over the groupoid $G=\left\{Z_{24}\right.$, *, $(3,8)\}$.

It is interesting to note that we can get for the same set of matrices V with entries from $\mathrm{C}\left(\mathrm{Z}_{24}\right)$ several groupoids G where $(\mathrm{t}, \mathrm{u})$ can take any value from $\mathrm{Z}_{24} \times \mathrm{Z}_{24}$. This feature will be very much helpful when one practically works on a problem.

Example 4.46: Let

$$
\begin{gathered}
\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right),\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4}
\end{array}\right], \left.\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{24}\right), \dot{i}_{\mathrm{F}}^{2}=23,\right. \\
1 \leq i \leq 9\}
\end{gathered}
$$

be a groupoid complex vector space over the groupoid $G=\left\{Z_{24}\right.$, *, $(13,0)\}$.

Example 4.47: Let

$$
\begin{gathered}
\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right),\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4}
\end{array}\right], \left.\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in \mathrm{C}\left(\mathrm{Z}_{24}\right), i_{F}^{2}=23,\right. \\
1 \leq i \leq 9\}
\end{gathered}
$$

be a complex groupoid vector space over the groupoid $G=\left\{Z_{24}\right.$, *, $(0,19)\}$.

## Example 4.48: Let

$$
\begin{gathered}
\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right),\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
a_{3} \\
\mathrm{a}_{4}
\end{array}\right], \left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{24}\right), \mathrm{i}_{\mathrm{F}}^{2}=23,\right. \\
1 \leq \mathrm{i} \leq 9\}
\end{gathered}
$$

be a complex groupoid vector space over the groupoid $G=\left\{Z_{24}\right.$, *, $(12,12)$.

## Example 4.49: Let

$$
\begin{gathered}
M=\left\{\left(a_{1}, a_{2}, a_{3}\right),\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right], \left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{24}\right), i_{F}^{2}=23,\right. \\
1 \leq i \leq 9\}
\end{gathered}
$$

be a complex groupoid vector space over the groupoid $G=\left\{Z_{23}\right.$, *, $(13,19)\}$.

Example 4.50: Let

$$
\begin{gathered}
P=\left\{\left(a_{1}, a_{2}, a_{3}\right),\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right], \left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{24}\right), i_{F}^{2}=23,\right. \\
1 \leq i \leq 9\}
\end{gathered}
$$

be a strong groupoid complex vector space (strong complex groupoid vector space) over the complex groupoid $G=\left\{C\left(Z_{24}\right)\right.$, *, $(10,12)$ where $\mathrm{C}\left(\mathrm{Z}_{24}\right)=\left\{\mathrm{a}+\mathrm{bi}_{\mathrm{F}} \mid \mathrm{i}_{\mathrm{F}}^{2}=23, \mathrm{a}, \mathrm{b} \in \mathrm{Z}_{24}\right\}$.

Example 4.51: Let

$$
M=\left\{\left(a_{1}, a_{2}, a_{3}\right),\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right], \left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{24}\right), 1 \leq i \leq 9\right\}
$$

be a strong groupoid complex groupoid vector space over the complex groupoid

$$
\mathrm{G}=\left\{\mathrm{C}\left(\mathrm{Z}_{24}\right)=\left\{\mathrm{a}+\mathrm{i}_{\mathrm{F}} \mathrm{~b} \mid \mathrm{i}_{\mathrm{F}}^{2}=23, \mathrm{a}, \mathrm{~b} \in \mathrm{Z}_{24}, *,(20,20)\right\} .\right.
$$

Now we can give one or two examples of strong complex groupoid linear algebras and complex groupoid linear algebras.

Example 4.52: Let

$$
\mathrm{T}=\left\{\left.\left[\begin{array}{lll}
\mathrm{a}_{1} & \mathrm{a}_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6}
\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{43}\right), 1 \leq \mathrm{i} \leq 6, \mathrm{i}_{\mathrm{F}}^{2}=42,(0,3), *\right\}
$$

be a groupoid complex linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{43}, *,(0,3)\right\}$.

## Example 4.53: Let

$$
\begin{aligned}
& \mathrm{M}=\left\{\begin{array}{cccc}
{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
\vdots & \vdots & \vdots & \vdots \\
a_{37} & a_{38} & a_{39} & a_{40}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{30}\right), 1 \leq i \leq 40, ~}
\end{array}\right. \\
& \left.\mathrm{i}_{\mathrm{F}}^{2}=29,(5,5), *\right\}
\end{aligned}
$$

be a complex groupoid linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{30},{ }^{*},(5,5)\right\}$.

## Example 4.54: Let

$$
P=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{26}\right), 1 \leq i \leq 9,(10,8), *\right\}
$$

be a complex groupoid linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{26},{ }^{*},(10,8)\right\}$.

Example 4.55: Let

$$
M=\left\{\left(a_{1}, a_{2}, \ldots, a_{10}\right) \mid a_{i} \in C\left(Z_{48}\right), 1 \leq i \leq 10,(1,7), *\right\}
$$

be a complex groupoid linear algebra over the groupoid $\mathrm{G}=$ $\left\{\mathrm{Z}_{48},{ }^{*},(1,7)\right\}$.

Example 4.56: Let

$$
M=\left\{\left.\left(\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{15}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{15}\right), 1 \leq i \leq 15,(10,5), *, i_{F}^{2}=14\right\}
$$

be a groupoid complex linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{15},{ }^{*},(10,5)\right\}$.

Now we can also have strong groupoid complex linear algebras.

Example 4.57: Let

$$
S=\left\{\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{9}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{12}\right), 1 \leq i \leq 9,(3,7),{ }^{*}, i_{F}^{2}=1\right\}
$$

be a strong complex groupoid linear algebra over the groupoid $\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{12}\right)=\left\{\mathrm{a}+\mathrm{i}_{\mathrm{F}} \mathrm{b} \mid \mathrm{a}, \mathrm{b} \in \mathrm{Z}_{12}, \mathrm{i}_{\mathrm{F}}^{2}=11\right\},{ }^{*},(3,7)\right\}$.

Example 4.58: Let

$$
\begin{gathered}
V=\left\{\begin{array}{c}
{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{40}\right), 1 \leq i \leq 16,} \\
\left.(10,10), *, i_{F}^{2}=39\right\}
\end{array}\right. \\
\hline \text {, }
\end{gathered}
$$

be a strong complex groupoid linear algebra over the groupoid $\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{40}\right),{ }^{*},(10,10)\right\}$.

## Example 4.59: Let

$$
\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{20}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{10}\right), 1 \leq \mathrm{i} \leq 20,(5,5), *, \mathrm{i}_{\mathrm{F}}^{2}=9\right\}
$$

be a strong complex groupoid linear algebra over the groupoid $C(G)=\left\{C\left(Z_{10}\right),{ }^{*},(15,5), \mathrm{i}_{\mathrm{F}}^{2}=9\right\}$.

Now we can define substructures in them which is a matter of routine.

## Example 4.60: Let

$$
\begin{aligned}
M=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}\right),\right. & {\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right], \left.\left[\begin{array}{ccccccc}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} & a_{7} \\
a_{8} & a_{9} & a_{10} & a_{11} & a_{12} & a_{13} & a_{14} \\
a_{15} & a_{16} & a_{17} & a_{18} & a_{19} & a_{20} & a_{21}
\end{array}\right] \right\rvert\, } \\
a_{i} & \left.\in C\left(Z_{25}\right), 1 \leq i \leq 21, i_{F}^{2}=24\right\}
\end{aligned}
$$

be a complex groupoid vector space over the complex groupoid $\mathrm{G}=\left\{\mathrm{Z}_{25},{ }^{*},(10,11)\right\}$.

Take

$$
\mathrm{P}_{1}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}, \mathrm{a}_{4}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{25}\right), 1 \leq \mathrm{i} \leq 4, \mathrm{i}_{\mathrm{F}}^{2}=24\right\} \subseteq \mathrm{M},
$$

$$
P_{2}=\left\{\left.\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{25}\right), 1 \leq i \leq 4, i_{F}^{2}=24\right\} \subseteq M
$$

and

$$
\begin{gathered}
\left.P_{3}=\left\{\begin{array}{ccccccc}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} & a_{7} \\
a_{8} & a_{9} & a_{10} & a_{11} & a_{12} & a_{13} & a_{14} \\
a_{15} & a_{16} & a_{17} & a_{18} & a_{19} & a_{20} & a_{21}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{25}\right), \\
\left.1 \leq i \leq 21, i_{F}^{2}=24\right\} \subseteq M,
\end{gathered}
$$

$P_{1}, P_{2}$ and $P_{3}$ are complex groupoid vector subspaces of $M$ over the groupoid $G=\left\{Z_{25}, *,(10,11)\right\}$. Further $P_{i} \cap P_{j}=\phi, 1 \leq i$, $j \leq 3$ and $M=P_{1}+P_{2}+P_{3}$; that is $M$ a direct sum of subspaces.

## Example 4.61: Let

$$
\begin{gathered}
B=\left\{\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \cdot\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{20}
\end{array}\right],\right. \\
{\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right]\left(a_{1}, a_{2}, \ldots, a_{16}\right), \left.\left[\begin{array}{llllll}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in} \\
\left.C\left(Z_{47}\right), 1 \leq i \leq 20, i_{F}^{2}=46\right\}
\end{gathered}
$$

be a complex groupoid vector space.
Take

$$
\begin{aligned}
& S_{1}=\left\{\begin{array}{c}
{\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{20}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{47}\right), 1 \leq i \leq 20,} \\
\left.i_{F}^{2}=46\right\} \subseteq B, \\
S_{2}=\left\{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{20}
\end{array}\right]| | a_{i} \in C\left(Z_{47}\right), 1 \leq i \leq 20, i_{F}^{2}=46\right\} \subseteq B
\end{array}\right. \\
& \text { and }
\end{aligned}
$$

$$
\begin{gathered}
S_{3}=\left\{\begin{array}{c}
{\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{20}
\end{array}\right], \left.\left[\begin{array}{cccccc}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9} & a_{10} & a_{11} & a_{12}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{47}\right)} \\
\left.1 \leq i \leq 20, i_{F}^{2}=46\right\} \subseteq B
\end{array}\right.
\end{gathered}
$$

$S_{1}, S_{2}$ and $S_{3}$ are complex groupoid vector subspaces of $B$ over the groupoid G.

Clearly $S_{i} \cap S_{j}=\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{20}\end{array}\right]$ for $i \neq j, 1 \leq i, j \leq 3$ and $B \subseteq S_{1}+S_{2}$
$+S_{3}$ that is $B$ is the pseudo direct sum of complex groupoid vector subspaces of $B$ over the groupoid $G$.

Example 4.62: Let

$$
T=\left\{\left[\begin{array}{l}
a_{1} \\
a_{2}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{17}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{14}\right), \left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{50}\right)\right.
$$

$$
\left.1 \leq \mathrm{i} \leq 17, \mathrm{i}_{\mathrm{F}}^{2}=49\right\}
$$

be a groupoid complex vector space over the groupoid $G=\left\{Z_{50}\right.$, *, $(10,12)\}$.

Consider

$$
M=\left\{\left[\begin{array}{l}
a_{1} \\
a_{2}
\end{array}\right],\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{17}
\end{array}\right] \right\rvert\, a_{i} \in Z_{50}, 1 \leq i \leq 17\right\}
$$

to be the groupoid vector space over the groupiod G. We say M is a pseudo complex groupoid vector subspace of V over the groupoid G.

Example 4.63: Let

$$
\begin{aligned}
& V=\left\{\left(\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right),\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right],\right. \\
& \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{16}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{20}\right) \quad a_{i} \in C\left(Z_{120}\right), 1 \leq i \leq 20, i_{F}^{2}=119\right\}
\end{aligned}
$$

be a groupoid complex vector space over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{120}\right.$, *, $\left.(26,0)\right\}$.

Consider

$$
\begin{gathered}
P=\left\{\left(\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right),\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{16}
\end{array}\right] \right\rvert\, a_{i} \in\right. \\
\left.C\left(Z_{120}\right), 1 \leq i \leq 20\right\} \subseteq T,
\end{gathered}
$$

P is a pseudo complex groupoid vector subspace of T over the groupoid G.

Consider a map $\mathrm{f}: \mathrm{T} \rightarrow \mathrm{T}$ defined by

$$
\begin{aligned}
& f\left(\left(\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right)\right)=\left(a_{1}, a_{2}, \ldots, a_{20}\right) \\
& f\left(\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right]\right)=\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{16}
\end{array}\right] . \\
& f\left(\left(a_{1}, a_{2}, \ldots, a_{20}\right)\right)=\left(\begin{array}{llll}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right)
\end{aligned}
$$

and

$$
\mathrm{f}\left(\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
\mathrm{a}_{16}
\end{array}\right]\right)=\left[\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} & \mathrm{a}_{4} \\
\mathrm{a}_{5} & \mathrm{a}_{6} & \mathrm{a}_{7} & \mathrm{a}_{8} \\
\mathrm{a}_{9} & \mathrm{a}_{10} & \mathrm{a}_{11} & \mathrm{a}_{12} \\
\mathrm{a}_{13} & \mathrm{a}_{14} & \mathrm{a}_{15} & a_{16}
\end{array}\right] .
$$

F is clearly a linear operator on T .
Let $\eta: T \rightarrow Z_{120}$ defined by
$\eta\left(\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{16}\end{array}\right]\right)=$ sum of real part of $\left(a_{1}, a_{2}, \ldots, a_{16}\right)(\bmod 120)$.
$\eta\left(\left(a_{1}, \ldots, a_{20}\right)\right)=$ sum of real part of $a_{10}$ and $a_{20}(\bmod 120)$
$\eta\left(\left[\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right]\right)$
$=$ sum of real part of $a_{1}+a_{6}+a_{11}+a_{16}(\bmod (120))$
$\eta\left(\left(\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20}\end{array}\right)\right)$
$=$ sum of real part of $\left(a_{5}+a_{10}+a_{15}+a_{20}\right)(\bmod 120)$.
In this way $\eta$ is a linear functional on $T$.
Example 4.64: Let

$$
\left.\begin{array}{l}
W=\left\{\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right],\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{11} & a_{12}
\end{array}\right],\right. \\
\left(a_{1}, a_{2}, \ldots, a_{10}\right), \left.\left(\begin{array}{lllll}
a_{1} & a_{2} & a_{3} & a_{4} & a_{5} \\
a_{6} & a_{7} & a_{8} & a_{9} & a_{10}
\end{array}\right) \right\rvert\, a_{i} \in C\left(Z_{10}\right), 1 \leq i \leq 12, \\
\left.\qquad i_{F}^{2}=9\right\}
\end{array}\right\} \begin{aligned}
& \text { be a complex groupoid vector space over the groupoid } \\
& G=\left(Z_{10}, *,(5,2)\right\} .
\end{aligned}
$$

$$
\left.\begin{array}{c}
V=\left\{\left(a_{1}, a_{2}, \ldots, a_{9}\right),\left(\begin{array}{ccc}
a_{1} & a_{2} & \ldots \\
a_{6} & a_{7} & \ldots
\end{array} a_{10}\right.\right.
\end{array}\right),
$$

be a complex groupoid vector space over the groupoid $G=\left\{Z_{10}\right.$, *, $(5,2)$.

Define $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{V}$ by
$T\left(\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right]\right)=\left(a_{1}, a_{2}, \ldots, a_{9}\right)$
$\mathrm{T}\left(\left[\begin{array}{cc}\mathrm{a}_{1} & a_{2} \\ \mathrm{a}_{3} & a_{4} \\ \vdots & \vdots \\ a_{11} & a_{12}\end{array}\right]\right)=\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9} \\ a_{10} & a_{11} & a_{12}\end{array}\right]$
$T\left(\left(a_{1}, a_{2}, \ldots, a_{10}\right)\right)=\left[\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{5} \\ a_{6} & a_{7} & \ldots & a_{10}\end{array}\right]$
$\mathrm{T}\left(\left(\begin{array}{ccccc}a_{1} & a_{2} & a_{3} & a_{4} & a_{5} \\ a_{6} & a_{7} & a_{8} & a_{9} & a_{10}\end{array}\right)\right)=\left[\begin{array}{cc}a_{1} & a_{2} \\ a_{3} & a_{4} \\ \vdots & \vdots \\ a_{9} & a_{10}\end{array}\right]$.
Clearly T is a linear transformation of W to V .

Example 4.65: Let
$M=\left\{\left(a_{1}, a_{2}, a_{3}\right),\left[\begin{array}{l}a_{1} \\ a_{2}\end{array}\right], \left.\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{6}\right), 1 \leq i \leq 4, i_{F}^{2}=5\right\}$
be a complex groupoid vector space over the groupoid $\left\{Z_{6},{ }^{*},(3,0)\right\}=G$.

We define a map $\mathrm{f}: \mathrm{M} \rightarrow \mathrm{G}$ as follows:
$f\left(a_{1}, a_{2}, a_{3}\right)=$ sum of real part of $a_{i}(\bmod 6)$.
That is if $\left.\mathrm{f}\left(3+4 \mathrm{i}_{\mathrm{F}}, 2 \mathrm{i}_{\mathrm{F}}, 5 \mathrm{i}_{\mathrm{F}}+5\right)\right)=3+5(\bmod 6)=2$

$$
\begin{gathered}
f\left(\left[\begin{array}{l}
a_{1} \\
a_{2}
\end{array}\right]\right)=\text { real part of } a_{2} \text { that is } \\
f\left(\left[\left[\begin{array}{c}
3+5 i_{F} \\
5+2 i_{F}
\end{array}\right]\right)=5\right.
\end{gathered}
$$

and

$$
\begin{gathered}
f\left(\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right]\right)=\text { sum of real part of }\left(a_{1}+a_{4}\right)(\bmod 6) . \\
\text { That is } f\left(\left[\begin{array}{cc}
3 i_{F}+5 & 2 i_{F} \\
2 i_{F}+4 & 4+4 i_{F}
\end{array}\right]\right)=5+4(\bmod 6)=3 .
\end{gathered}
$$

Thus f is a linear functional on M .
Now we can get similar results in case of strong complex groupoid vector spaces / linear algebras over a complex groupoid C (G). We see every strong complex groupoid vector
space contains a pseudo strong complex subgroupoid vector space.

## Example 4.66: Let

$V=\left\{\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6}\end{array}\right],\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{7}\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{8}\right), \left.\left[\begin{array}{cc}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{13}\right)\right.$,

$$
1 \leq i \leq 8\}
$$

be a strong complex groupoid vector space over the complex $\operatorname{groupoid} \mathrm{C}(\mathrm{G})=\left\{\mathrm{a}+\mathrm{bi}_{\mathrm{F}} \mid \mathrm{a}, \mathrm{b} \in \mathrm{Z}_{13}, \mathrm{i}_{\mathrm{F}}^{2}=12,{ }^{*},(3,10)\right\}$.

Take

$$
\begin{aligned}
& P=\left\{\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{7}
\end{array}\right], \left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{13}\right), 1 \leq i \leq 7,\right. \\
& \left.\mathrm{i}_{\mathrm{F}}^{2}=12\right\} \subseteq \mathrm{V},
\end{aligned}
$$

P is a pseudo strong complex subgroupoid vector subspace over the subgroupoid $\mathrm{G}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{13},(3,10)\right.$, * $\}$.

Example 4.67: Let

$$
M=\left\{\left.\left[\begin{array}{llll}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8}
\end{array}\right] \right\rvert\, a_{j} \in C\left(Z_{45}\right), *,(13,0) 1 \leq j \leq 8\right\}
$$

be a strong complex groupoid vector space over the complex groupoid $C(G)=\left\{a+b_{F} \mid a, b \in Z_{45}, *,(13,0) i_{F}^{2}=44\right\}$.

$$
\begin{gathered}
P=\left\{\left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8}
\end{array}\right] \right\rvert\, a_{j} \in C\left(Z_{45}\right), *,(13,0) 1 \leq i \leq 8,\right. \\
\left.i_{F}^{2}=44\right\} \subseteq M
\end{gathered}
$$

is a pseudo strong complex subgroupoid linear algebra over the subgroupoid $G=\left\{Z_{45}\right.$, *, $\left.(13,0)\right\}$.

Next we proceed onto define loop vector spaces, strong loop vector spaces, quasi loop vector spaces and strong quasi loop vector spaces and describe them with examples.

DEFINITION 4.2: Let $S=\left\{L_{n}(m) \mid\{e, 1,2, \ldots, n\} \in Z_{n} \cup\{e\}, n\right.$ $>3$, $n$ odd, $k m<n$ with $(m-1, n)=1$, and $(n, m)=1$, *\} be a loop of order $n$. $V$ be a set; if for all $v \in V$ and $s \in S$
(i) $s v, v s \in V$
(ii) $s_{1} * s_{2}(v)=s_{1} v * s_{2} v$ for all $s_{1}, s_{2} \in S$ and $v \in V$ then we define $V$ to be a loop vector space defined over the loop $S$.

If $V$ is itself a loop and $V$ is a loop vector space we define $V$ to be strong loop linear algebra.

If on V is defined a closed binary operation and V is a loop vector space over S then we define V to be a loop linear algebra over S.

We will give examples of them.
Example 4.68: Let

$$
\begin{gathered}
P=\left\{\left(a_{1}, a_{2}, a_{3}\right),\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{12}
\end{array}\right], \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right] \right\rvert\,\right. \\
\left.a_{i} \in L_{13}(7), 1 \leq i \leq 20\right\}
\end{gathered}
$$

be a loop vector space over the loop $S=L_{13}(7)$.

## Example 4.69: Let

$$
\begin{gathered}
\mathrm{M}=\left[\begin{array}{cc}
\mathrm{a}_{1} & \mathrm{a}_{2} \\
\mathrm{a}_{3} & \mathrm{a}_{4}
\end{array}\right],\left[\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\vdots \\
a_{12}
\end{array}\right], \left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right] \right\rvert\, a_{i} \in L_{13}(7), \\
1 \leq i \leq 20\}
\end{gathered}
$$

be a loop vector space over the loop $S=L_{13}$ (7).
Example 4.70: Let

$$
\begin{aligned}
& \mathbf{M}=\left\{\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{15} & a_{16}
\end{array}\right],\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{12} \\
a_{13} & a_{14} & \ldots & a_{24}
\end{array}\right], \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & a_{3} & a_{4} \\
a_{5} & a_{6} & a_{7} & a_{8} \\
a_{9} & a_{10} & a_{11} & a_{12} \\
a_{13} & a_{14} & a_{15} & a_{16}
\end{array}\right] \right\rvert\, \\
& \left.\mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{15}(8), 1 \leq \mathrm{i} \leq 24\right\}
\end{aligned}
$$

be a loop vector space over the loop $S=L_{15}$ (8).
Example 4.71: Let

$$
\begin{aligned}
& \mathbf{J}=\left\{\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right], \left.\left(a_{1}, a_{2}, \ldots, a_{20}\right)\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
\vdots & \vdots & & \vdots \\
a_{91} & a_{92} & \ldots & a_{100}
\end{array}\right] \right\rvert\,\right. \\
& \left.\mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{43}(8), 1 \leq \mathrm{i} \leq 100\right\}
\end{aligned}
$$

be a loop vector space over the loop $S=L_{43}(8)$.

Consider

$$
P_{1}=\left\{\left.\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{43}(8), 1 \leq i \leq 9\right\},
$$

$P_{1}$ is a loop vector subspace of $J$ over the loop $S=L_{43}$ (8).

$$
P_{2}=\left\{\left(a_{1}, a_{2}, \ldots, a_{20}\right) \mid a_{i} \in L_{43}(8), 1 \leq i \leq 20\right\} \text { is a loop }
$$ vector subspace of J over the loop $\mathrm{S}=\mathrm{L}_{43}$ (8).

Finally

$$
\left.\left.P_{3}=\left\{\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20} \\
\vdots & \vdots & & \vdots \\
a_{91} & a_{92} & \ldots & a_{100}
\end{array}\right] \right\rvert\, a_{i} \in L_{43}(8), 1 \leq i \leq 100\right\}
$$

is a loop vector subspace of J over the loop S .
Clearly $\mathrm{P}_{\mathrm{i}} \cap \mathrm{P}_{\mathrm{j}}=\phi$ if $\mathrm{i} \neq \mathrm{j} ; 1 \leq \mathrm{i}, \mathrm{j} \leq 3$ and $\mathrm{J}=\mathrm{P}_{1}+\mathrm{P}_{2}+\mathrm{P}_{3}$. Thus J is a direct sum of loop vector subspace of J over S .

Example 4.72: Let

$$
\begin{gathered}
M=\left\{\begin{array}{c}
{\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{10}
\end{array}\right], \left.\left(\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{9} \\
a_{10} & a_{11} & \ldots & a_{18} \\
a_{19} & a_{20} & \ldots & a_{27}
\end{array}\right)\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{8} \\
a_{9} & a_{10} & \ldots & a_{16} \\
a_{17} & a_{18} & \ldots & a_{24} \\
a_{25} & a_{26} & \ldots & a_{32}
\end{array}\right] \right\rvert\,} \\
\left.a_{i} \in L_{53}(19), 1 \leq i \leq 32\right\}
\end{array},\left\{\begin{array}{c}
\text { in }
\end{array}\right]\right.
\end{gathered}
$$

be a loop vector space over the loop $S=L_{53}(19)$.

$$
\begin{gathered}
V_{1}=\left\{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{10}
\end{array}\right] \right\rvert\, a_{i} \in L_{53}(19), 1 \leq i \leq 10\right\} \subseteq M, \\
V_{2}=\left\{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], \left.\left(\begin{array}{llll}
a_{1} & a_{2} & \ldots & a_{9} \\
a_{10} & a_{11} & \ldots & a_{18}
\end{array}\right) \right\rvert\, a_{i} \in L_{53}(19), 1 \leq i \leq 18\right\} \\
V_{3}= \begin{cases}{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right],\left(\begin{array}{llll}
a_{1} & a_{2} & \ldots & a_{9} \\
a_{10} & a_{11} & \ldots & a_{18} \\
a_{19} & a_{20} & \ldots & a_{27}
\end{array}\right), \mid a_{i} \in L_{53}(19),} \\
1 \leq i \leq 27\} \subseteq M\end{cases}
\end{gathered}
$$

and

$$
\begin{gathered}
\mathrm{V}_{4}=\left\{\left[\begin{array}{cc}
\mathrm{a}_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{8} \\
a_{9} & a_{10} & \ldots & a_{16} \\
a_{17} & a_{18} & \ldots & a_{24} \\
a_{25} & a_{26} & \ldots & a_{32}
\end{array}\right] \right\rvert\, a_{i} \in L_{53}(19),\right. \\
1 \leq i \leq 32\} \subseteq M
\end{gathered}
$$

are loop vector subspace of $M$ over the loop $L_{53}$ (19).
Clearly $\mathrm{V}_{\mathrm{i}} \cap \mathrm{V}_{\mathrm{j}}=\left[\begin{array}{ll}\mathrm{a}_{1} & \mathrm{a}_{2} \\ \mathrm{a}_{3} & a_{4}\end{array}\right] ; \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq 4$ and $\mathrm{M} \subseteq \mathrm{V}_{1}+\mathrm{V}_{2}+\mathrm{V}_{3}+\mathrm{V}_{4}$; thus M is a pseudo direct sum of loop vector subspace of M .

## Example 4.73: Let

$V=\left\{\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6}\end{array}\right],\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{7}\end{array}\right], \left.\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in L_{19}(8), 1 \leq i \leq 9\right\}$
and

$$
W=\left\{\left[\begin{array}{ll}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
a_{5} & a_{6}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{7}\right), \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{9}
\end{array}\right] \right\rvert\, a_{i} \in L_{19}(8), 1 \leq i \leq 9\right\}
$$

be two loop vector spaces over the loop $S=L_{19}$ (8).
Define $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{W}$ by

$$
\begin{gathered}
\mathrm{T}\left(\left[\begin{array}{ccc}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & a_{6}
\end{array}\right]\right)=\left[\begin{array}{ll}
\mathrm{a}_{1} & a_{2} \\
\mathrm{a}_{3} & a_{4} \\
\mathrm{a}_{5} & a_{6}
\end{array}\right] \\
\mathrm{T}\left(\left[\begin{array}{c}
a_{1} \\
\mathrm{a}_{2} \\
\vdots \\
\mathrm{a}_{7}
\end{array}\right]\right)=\left(a_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{7}\right) \text { and } \\
\mathrm{T}\left(\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8} & a_{9}
\end{array}\right]\right)=\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{9}
\end{array}\right]
\end{gathered}
$$

T is a linear transformation of V into W .

## Example 4.74: Let

$$
\begin{aligned}
& M=\left\{\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{6}\right),\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{8} \\
a_{9}
\end{array}\right] \right\rvert\,\right. \\
& \left.\mathrm{a}_{\mathrm{i}} \in \mid \mathrm{L}_{59}(25), 1 \leq \mathrm{i} \leq 9\right\}
\end{aligned}
$$

be a loop vector space over the loop $S=L_{59}(25)$.
Define $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{V}$ as follows.

$$
\begin{gathered}
T\left(\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right]\right)=\left(a_{1}, a_{2}, a_{3}, a_{4}, a_{5}, a_{6}\right) \\
T\left(\left(a_{1}, a_{2}, \ldots, a_{6}\right)\right)=\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6}
\end{array}\right] \\
T\left(\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right]\right)=\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{8} \\
a_{9}
\end{array}\right] \\
T\left(\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{8} \\
a_{9}
\end{array}\right]\right)=\left[\begin{array}{lll}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right]
\end{gathered}
$$

T is a linear operator on V .
Define $\mathrm{f}: \mathrm{M} \rightarrow \mathrm{L}_{59}$ (25)
$f\left(\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6}\end{array}\right]\right)=\left(a_{1}+a_{2}+a_{3}\right) \bmod 59$

That is $\mathrm{f}\left(\left[\begin{array}{ccc}40 & 29 & 31 \\ 6 & 2 & 17\end{array}\right]\right)=(40+29+31)(\bmod 59)$

$$
=41 \text {. }
$$

$f\left(\left(a_{1}, a_{2}, \ldots, a_{6}\right)\right)=\sum a_{i}(\bmod 59)$
that is

$$
\begin{aligned}
f((20,4,8,16,7,1)) & =(20+4+8+16+7+1)(\bmod 59) \\
& =56 .
\end{aligned}
$$

$$
\mathrm{f}\left(\left[\begin{array}{lll}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6} \\
\mathrm{a}_{7} & a_{8} & a_{9}
\end{array}\right]\right)=\mathrm{a}_{1}+\mathrm{a}_{5}+\mathrm{a}_{9}(\bmod 59)
$$

that is

$$
\mathrm{f}\left(\left[\begin{array}{ccc}
40 & 0 & 2 \\
7 & 26 & 19 \\
6 & 43 & 29
\end{array}\right]\right)=(40+26+29)(\bmod 59)=36
$$

and

$$
\begin{aligned}
& \mathrm{f}\left(\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4} \\
\mathrm{a}_{5} \\
\mathrm{a}_{6} \\
\mathrm{a}_{7} \\
\mathrm{a}_{8} \\
\mathrm{a}_{9}
\end{array}\right]\right)=\mathrm{a}_{1}+\mathrm{a}_{9}(\bmod 59) \\
& \mathrm{f}\left(\left[\begin{array}{l}
20 \\
22 \\
40 \\
31 \\
21 \\
10 \\
11 \\
26 \\
52
\end{array}\right]\right)=(20+52(\bmod 59))=13 .
\end{aligned}
$$

Thus $f$ is a linear functional on $M$.
By using these linear functional concept is an extended way to any structure over which the vector space or linear algebra is defined.

## Example 4.75: Let

$$
\mathrm{T}=\left\{\left[\begin{array}{lll}
\mathrm{a}_{1} & a_{2} & a_{3} \\
\mathrm{a}_{4} & a_{5} & a_{6}
\end{array}\right] \text { where } \mathrm{a}_{\mathrm{i}} \in \mathrm{~L}_{23}(7), *, 1 \leq \mathrm{i} \leq 6\right\}
$$

be a loop linear algebra over the loop $L_{23}(7)$.

Example 4.76: Let

$$
W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in L_{29}(8), *\right\}
$$

be a loop linear algebra over the loop $\mathrm{L}_{29}$ (7).

$$
\begin{aligned}
\text { If } p(x) & =7+3 x^{2}+5 x^{3} \in W \text { and } 4 \in L_{29}(8) \text { then } \\
& \begin{aligned}
4 p(x) & =4\left(7+3 x^{2}+5 x^{3}\right) \\
& =4 * 7+4 * 3 x^{2}+4 * 5 x^{3} \\
& =(56-28)+(24-28) x^{2}+(40-28) x^{3} \\
& =(27+1)+25 x^{2}+12 x^{3}
\end{aligned}
\end{aligned}
$$

Suppose $s(x)=6+2 x+9 x^{4} \in W$

$$
\begin{aligned}
\text { Now } s(x) * p(x) & =\left(6+2 x+9 x^{4}\right)\left(7+3 x^{2}+5 x^{3}\right) \\
& =6 * 7+(2 * 3) x^{3}+(9 * 5) x^{7} \\
& =(56-42)+(24-14) x^{3}+(40-63) x^{7} \\
& =14+10 x^{3}+6 x^{7} \in \mathrm{~W} .
\end{aligned}
$$

This is the way operations on W , the loop linear algebra is performed.

Suppose instead the polynomial has matrix coefficients we perform the natural product of matrices and get the loop linear algebra of polynomials.

Recall if

$$
x=\left[\begin{array}{l}
d_{1} \\
d_{2} \\
d_{3} \\
d_{4}
\end{array}\right] \text { and } y=\left[\begin{array}{l}
a_{1} \\
a_{2} \\
a_{3} \\
a_{4}
\end{array}\right]
$$

be column matrices with entries from $\mathrm{L}_{19}$ (3) that is $\mathrm{a}_{\mathrm{j}}, \mathrm{d}_{\mathrm{i}} \in \mathrm{L}_{19}(3) ; 1 \leq \mathrm{i}, \mathrm{j} \leq 4$.

$$
\text { Then } \mathrm{x} * \mathrm{y}=\left[\begin{array}{l}
\mathrm{d}_{1} \\
\mathrm{~d}_{2} \\
\mathrm{~d}_{3} \\
\mathrm{~d}_{4}
\end{array}\right] *\left[\begin{array}{l}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4}
\end{array}\right]=\left[\begin{array}{l}
\mathrm{d}_{1} * \mathrm{a}_{1} \\
\mathrm{~d}_{2} * \mathrm{a}_{2} \\
\mathrm{~d}_{3} * \mathrm{a}_{3} \\
\mathrm{~d}_{4} * \mathrm{a}_{4}
\end{array}\right] .
$$

This is way the natural product of column matrices are defined.

$$
\begin{gathered}
\text { Suppose } x=\left[\begin{array}{l}
3 \\
8 \\
1 \\
5
\end{array}\right] \text { and } y=\left[\begin{array}{l}
2 \\
3 \\
7 \\
4
\end{array}\right] \text { then } \\
x * y=\left[\begin{array}{l}
3 \\
8 \\
1 \\
5
\end{array}\right] *\left[\begin{array}{l}
2 \\
3 \\
7 \\
4
\end{array}\right] \\
=\left[\begin{array}{l}
3 * 2 \\
8 * 3 \\
1 * 7 \\
5 * 4
\end{array}\right]=\left[\begin{array}{c}
6-6 \\
9-16 \\
21-2 \\
12-10
\end{array}\right]=\left[\begin{array}{l}
19 \\
12 \\
19 \\
2
\end{array}\right]
\end{gathered}
$$

This is the way natural product which is inherited from the loop $\mathrm{L}_{19}(3)$ is obtained.

Likewise if $\mathrm{x}=\left[\begin{array}{lll}3 & 2 & 1 \\ 1 & 5 & 7 \\ \mathrm{e} & 3 & 1 \\ 5 & 7 & \mathrm{e}\end{array}\right]$ and $\mathrm{y}=\left[\begin{array}{lll}2 & 1 & 4 \\ 3 & 5 & 2 \\ 1 & \mathrm{e} & 2 \\ 4 & \mathrm{e} & 5\end{array}\right]$

$$
\begin{gathered}
x^{*} y=\left[\begin{array}{lll}
3 & 2 & 1 \\
1 & 5 & 7 \\
\mathrm{e} & 3 & 1 \\
5 & 7 & \mathrm{e}
\end{array}\right] *\left[\begin{array}{lll}
2 & 1 & 4 \\
3 & 5 & 2 \\
1 & \mathrm{e} & 2 \\
4 & \mathrm{e} & 5
\end{array}\right] \\
=\left[\begin{array}{ccc}
6-6 & 3-4 & 12-2 \\
9-2 & 15-10 & 6-14 \\
1 & 3 & 6-2 \\
12-10 & 7 & 5
\end{array}\right] \\
=\left[\begin{array}{ccc}
19 & 18 & 10 \\
7 & 5 & 11 \\
1 & 3 & 4 \\
2 & 7 & 5
\end{array}\right]
\end{gathered}
$$

This is the way natural product of $4 \times 3$ matrices with entries from the loop are performed.

Finally as in case of complex groupoid vector spaces / linear algebras we can also in case of complex loops and complex quasi loops define the notion of complex loop vector space or complex loop linear algebra over a complex loop.

This is a matter of routine and hence is left as an exercise to the reader.

Now we can define special loop linear algebras and Smarandache special loop linear algebras as follows.

## DEFINITION 4.3: Let

$$
F L=\left\{\sum_{\mathrm{i}=1}^{+} \mathrm{a}_{\mathrm{i}} \mathrm{~g}_{\mathrm{i}} \mid a_{i} \in F \text { where } F \text { is a field and } g_{i} \in L_{n}(m)\right.
$$

a loop of order $n+1, n>3$, $n$ odd with $(m, n)=1$ and $(m-1, n)=$ $1,1<m<n$, $t$ finite\} be the loop ring of the loop L over the field $F$. We call FL the special non associative linear algebra over the field $F$. If the field $F$ is replaced by a $S$-ring we define FL to be a Smarandache special non associative linear algebra over the $S$-ring.

These special non associative linear algebra as well as Smaranache special linear algebras are finite dimensional some commutative and a few of them satisfy special identities.

These will be just illustrated by some examples.
Example 4.77: Let Q be the field of rationals. $\mathrm{L}=\mathrm{L}_{19}(10)$ be a loop. QL the loop ring is a special non associative linear algebra which is commutative and finite dimensional over Q .

Example 4.78: Let R be the field of reals. $\mathrm{L}=\mathrm{L}_{7}(3)$ be a loop. RL the loop ring which is a strong non associative linear algebra which is non commutative.

Example 4.79: Let $\mathrm{F}=\mathrm{Q}$ be the field. $\mathrm{L}=\mathrm{L}_{19}$ (2) be a loop. FL is the strong non associative linear algebra which satisfies the right alternative law.

Example 4.80: Let R be the field of reals. $\mathrm{L}=\mathrm{L}_{23}$ (22) be a loop. RL is a strong non associative linear algebra which satisfies the left alternative two.

We have the following theorem the proof of which is direct using the properties of the loops $\mathrm{L}_{\mathrm{n}}(\mathrm{m})$.

## THEOREM 4.2: Let

$L_{n}(m) \mid n>3$, $n$ odd, $1<m<n,(n, m)=1$ and $(n, m-1)=1$ )
be the collection of all loops. F be a field. FL the strong non associative linear algebra.
(i) There exist only one loop $L \in L_{n}$ with $L=L_{n}(n+1 / 2)$ such that FL is a commutative strong non associative linear algebra.
(ii) There exists only one loop $L \in L_{n}$ with $L=L_{n}$ (2) which is such that FL is a strong non associative linear algebra which satisfies the right alternative identity (that is right alternative strong non associative linear algebra)
(iii) There exists one and only one loop $L \in L_{n}$ with $L=L_{n}$ ( $n-1$ ) such that the strong non associative linear algebra satisfies the left alternative identity, that is a left alternative strong non associative algebra.
(iv) There exists no loop $L \in L_{n}$ such that FL the strong non associative linear algebra satisfies the alternative identity, that is $F L$ for no $L$ is an alternative strong non associative linear algebra.
(v) For every $L \in L_{n}$, the strong non associative linear algebra FL is always non associative.
(vi) For no $L \in L_{n}$ we have the strong non associative linear algebra FL is a Bol strong non associative linear algebra.
(vii) No strong non associative linear algebra FL is a Moufang strong non associative linear algebra.

We will give examples of S -strong non associative linear algebras over the S-ring.

Example 4.81: Let P be a $\mathrm{S}-\mathrm{ring} \mathrm{L}=\mathrm{L}_{\mathrm{n}}(\mathrm{m})$ be a loop. PL is the loop ring of the loop L over the S -ring P . PL is defined as the S -strong non associative linear algebra over P .

Example 4.82: Let $\mathrm{P}=\mathrm{Z}_{6}$ a S -ring $\mathrm{L}=\mathrm{L}_{9}(8)$ be a loop PL is a S -strong non associative linear algebra over P . Infact PL has only finite number of elements in them.

Example 4.83: Let $\mathrm{P}=\mathrm{Z}_{15}$ be a S-ring. $\mathrm{L}=\mathrm{L}_{19}(3)$ be a loop. PL is a S -strong non associative linear algebra over P .

Example 4.84: Let $\mathrm{P}=\mathrm{Z}_{216}$ be a S-ring. $\mathrm{L}=\mathrm{L}_{19}$ (18) be a loop. PL is a S -strong non associative linear algebra over P . Infact L is a left alternative S -strong non associative linear algebra over P of finite order.

Example 4.85: Let $\mathrm{P}=\mathrm{Z}_{177}$ be a S-ring. $\mathrm{L}=\mathrm{L}_{23}$ (2) be a loop. PL is a S -strong non associative linear algebra over the S -ring. Infact $P$ is a right alternative $S$-strong non associative linear algebra over P .

Example 4.86: Let $\mathrm{P}=\mathrm{Z}_{371}$ be a S -ring. $\mathrm{L}=\mathrm{L}_{25}$ (13) be a loop. PL is a commutative S -strong non associative linear algebra over P .

The theorem stated for strong non associative linear algebras over a field hold good in case of $S$-strong non associative linear algebras over the S-ring.

## Chapter Five

## Application of Non Associative Vector Spaces / Linear Algebras

We see the operations or working of the models in general are not associative. We have situations in which the functioning of the model is non associative. Thus these non associative vector spaces / linear algebras will cater to the needs of the researcher when the operations on them are non associative.

Certainly these new structures will be much useful and most utilized one in due course of time, when researchers scientists and technologists become familiar with these algebraic structures. Further it is needless to say the polynomials as linear algebras / vectors spaces are non associative finding solutions or solving equations happens to be a challenging research.

These non associative linear algebras / vector spaces using matrices will be useful when the working field happens to be a non associative one. It is pertinent to mention only when this study becomes familiar among researchers more and more applications would be found.

## Chapter Six

## Suggested Problems

In this chapter we suggest two hundred and fourteen number of problems, some of which are simple, some difficult and some at research level.

1. Find a groupoid of column matrices built using $\mathrm{Z}_{14}$.
2. Let $\left.\left.G=\left\{\begin{array}{l}a_{1} \\ a_{2} \\ a_{3} \\ a_{4}\end{array}\right] \right\rvert\, a_{i} \in Z_{15}, 1 \leq i \leq 4, *,(6,10)\right\}$ be $a$
groupoid.
(i) Is G a S-groupoid?
(ii) Find order of G?
(iii) Is G commutative?
(iv) Is G an alternative groupoid?
(v) Is G a Bol groupoid?
(vi) Is G a Moufang Groupoid?
3. Give an example of a square matrix groupoid which is not idempotent.
4. Let
$M=\left\{\left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{8} \\ a_{9} & a_{10} & \ldots & a_{16} \\ a_{17} & a_{18} & \ldots & a_{24} \\ a_{25} & a_{26} & \ldots & a_{32}\end{array}\right] \right\rvert\, a_{i} \in Z_{25}, 1 \leq i \leq 32, *\right.$,
$(2,3)\}$ be a groupoid?
(i) Does M satisfy any one of the special identities?
(ii) Can M be a S -groupoid?
(iii) Does M contain subgroupoids?
5. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{22}, *,(11,33)\right\}$ be a groupoid.
(i) Prove T is infinite.
(ii) Find subgroupoids if any.
(iii) Is T a S-groupoid?
(iv) Can T satisfy any of the special identities?
6. Let $W=\left\{\left.\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in Z_{43}, 1 \leq i \leq 9, *,(3,0)\right\}$ be
a groupoid.
(i) Prove W is finite.
(ii) Is W a S -groupoid?
(iii) Find $S$-subgroupoids if any in W.
(iv) Does W satisfy any of the special identities?
(v) Prove W is non associative.
(vi) Prove W is non commutative.
7. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{t}_{1}, \mathrm{t}_{2}, \mathrm{t}_{3}, \mathrm{t}_{4}, \mathrm{t}_{5}\right)\right.$ with $\mathrm{t}_{\mathrm{j}} \in \mathrm{Z}_{20}$, $\left.1 \leq \mathrm{j} \leq 5,^{*},(5,16)\right\}$ be a row matrix coefficient polynomial groupoid.
(i) Prove S satisfies all special identities like Bol, Moufang, alternative and P .
(ii) Is S a Smarandache groupoid?
(iii) Prove S is non commutative.
(iv) Find substructures in S.
(v) Prove these special polynomial groupoids are non associative.
8. Let $P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{c}m_{1} \\ m_{2} \\ \vdots \\ m_{10}\end{array}\right]\right.\right.$ with $\mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{19}, \quad 1 \leq \mathrm{j} \leq 10$, *, $(5,4)\}$ be a groupoid.
(i) Is P a S-Moufang groupoid?
(ii) Prove P is non commutative.
(iii) Is P a S-groupoid?
(iv) Find S-Bol subgroupoids if any in P?
(v) Is P an idempotent groupoid?
(vi) Find in P subgroupoids which are not S subgroupoids.
9. Let $G=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30} \\ a_{31} & a_{32} & \ldots & a_{40}\end{array}\right]\right.\right.$ where $a_{i} \in$ $\left.\mathrm{Z}_{12}, \quad 1 \leq \mathrm{i} \leq 40, *,(6,7)\right\}$ be a matrix coefficient polynomial groupoid.
(i) Prove G is a S-strong Bol groupoid.
(ii) Is G a S-strong P-groupoid?
(iii) Prove G is a S -strong alternative groupoid.
(iv) Is G a S-strong Moufang groupoid?
10. Let $M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right]\right.\right.$ where $a_{i} \in Z_{24}$, $1 \leq \mathrm{i} \leq 9, *,(3,22)\}$ be a matrix coefficient polynomial groupoid.
(i) Is M a P-groupoid?
(ii) Is M a S-groupoid?
(iii) Does M satisfy any of the special identities?
(iv) Find S-subgroupoids if any in M.
(v) Does M contain a subgroupoid which is not a S-subgroupoid?
11. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{m}_{1} \\ \mathrm{~m}_{2} \\ \vdots \\ \mathrm{~m}_{9}\end{array}\right]\right.\right.$ with $\mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{29}$, ,,$\left.(11,26)\right\}$ be a column matrix coefficient polynomial groupoid.
(i) Is M a S-groupoid?
(ii) Is M a S-Bol groupoid?
(iii) Is M a S-moufang groupoid?
(iv) Find a subgroupoid in M which is not a S subgroupoid.
12. Find any interesting properties about matrix groupoid.
13. What are the special features enjoyed by polynomial groupoids?
14. Determine some nice properties associated with matrix coefficient polynomial groupoid.
15. Describe some new features of non associative semilinear algebras.
16. Let $\mathrm{M}=\left\{\mathrm{Q}^{+} \cup\{0\},{ }^{*},(0,4)\right\}$ be the non associative semilinear algebra over the semifield $S=Z^{+} \cup\{0\}$.
(i) Find non associative semilinear subalgebras of M over S.
(ii) Is it possible to write M as a direct sum of subsemilinear algebras? Justify your claim.
17. Let $P=\left\{(a, b, c, d) \mid a, b, c, d \in Z^{+} \cup\{0\}\right.$, *, (7, 7) $\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.
18. Let $P=\left\{\begin{array}{c}\left.\left.\left[\begin{array}{c}a_{1} \\ a_{2} \\ a_{3} \\ \vdots \\ a_{10}\end{array}\right] \right\rvert\, a_{i} \in Z^{+} \cup\{0\}, 1 \leq i \leq 10, *,(7,9)\right\} \text { be } a \\ \end{array}\right.$ non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.
(i) Can P be written as a direct sum of semilinear subalgebras?
(ii) Can P be written as a pseudo direct sum of semilinear subalgebras?
(iii) Is P quasi simple?
19. Let $M=\left\{\left.\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in R^{+} \cup\{0\}, 1 \leq i \leq 9, *\right.$, (24,
7)\} be a non associative semilinear algebra over the semifield $\mathrm{Q}^{+} \cup\{0\}$ ?
(i) Is T $=\left\{\begin{array}{ccc}{\left.\left[\begin{array}{ccc}a_{1} & 0 & 0 \\ 0 & a_{2} & 0 \\ 0 & a_{3} & 0\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Q}^{+} \cup\{0\}, 1 \leq i \leq 3, \text { *, }}\end{array}\right.$
$(24,7)\} \subseteq \mathrm{M}$; a non associative semilinear algebra of M over the semifield $\mathrm{Q}^{+} \cup\{0\}$.
(ii) Prove M is not quasi simple.
(iii) Can M be written as a direct sum?
20. Let $\mathrm{M}=\left\{\left.\left(\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30}\end{array}\right] \right\rvert\, a_{i} \in Z^{+} \cup\{0\}, 1 \leq i \leq 30\right.$,
*, $(0,9)\}$ be a non associative semilinear algebra over the semifield $Z^{+} \cup\{0\}=F$.
(i) Is S quasi simple?
(ii) Can S be written a direct sum of non associative semilinear algebras over $\mathrm{F}=\mathrm{Z}^{+} \cup\{0\}$ ?
(iii) Define a semilinear operator T on S , so that $\mathrm{T}^{-1}$ does not exist.
(iv) Suppose $\operatorname{Hom}_{\mathrm{F}}(\mathrm{S}, \mathrm{S})$ is the collection of all semilinear operators. What is the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{F}}(\mathrm{S}, \mathrm{S})$ ?
21. Let $T=M=\left\{\left.\left[\begin{array}{c}m_{1} \\ m_{2} \\ \vdots \\ m_{12}\end{array}\right] \right\rvert\, \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}^{+} \cup\{0\}, 1 \leq \mathrm{i} \leq 12\right.$, *, (3,
2)\} be a non associative semilinear algebra over the semifield $S=Z^{+} \cup\{0\}$.
(i) Write non associative semilinear subalgebras of T over S.
(ii) Write T as a direct sum.
(iii) Is T quasi simple?
(iv) Is $\mathrm{W}=\left\{\left.\left[\begin{array}{c}\mathrm{m}_{1} \\ \mathrm{~m}_{2} \\ 0 \\ \vdots \\ 0\end{array}\right] \right\rvert\, \mathrm{m}_{1}, \mathrm{~m}_{2} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,2)\right\} \subseteq \mathrm{T} \mathrm{a}$
non associative semilinear subalgebra of T over S .
22. Let $\mathrm{M}=\left\{\left.\left\{\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in Z^{+} \cup\{0\}, 1 \leq i \leq 9\right.$, *,
$(3,10)\}$ be a non associative semilinear algebra over the semifield $S=Z^{+} \cup\{0\}$.
(i) Find non associative semilinear subalgebras of M over S .
(ii) Is T $\left.=\left\{\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ 0 & 0 & 0 \\ 0 & 0 & 0\end{array}\right] \right\rvert\, a_{i} \in Z^{+} \cup\{0\}, 1 \leq i \leq 3$, *,
$(3,10)\} \subseteq \mathrm{M}$ a semilinear subalgebra of M over S ?
23. Let $\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}, *,(3,0)\right\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup$ $\{0\}$.
(i) Find non associative semilinear subalgebras of V over S.
(ii) Is V quasi simple?
24. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{R}^{+} \cup\{0\}, *,(2,2)\right\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.
(i) Prove M is a commutative non associative semilinear algebra.
(ii) Can M be written as a direct sum of semilinear subalgebras?
25. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}^{+} \cup\{0\}\right.$, *, (3, 21) $\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.
(i) Find some interesting properties enjoyed by M. Distinguish between usual associative semilinear algebra of polynomials with coefficients from $\mathrm{Z}^{+} \cup$ $\{0\}$ and M .
26. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in\left(\mathrm{d}_{1}, \mathrm{~d}_{2}, \ldots, \mathrm{~d}_{10}\right) ; \mathrm{d}_{\mathrm{j}} \in \mathrm{Z}^{+} \cup\{0\}\right.$, $\left.1 \leq \mathrm{j} \leq 10,{ }^{*},(3, \sqrt{3})\right\}$ be a non associative semilinear algebra over the semifield $S=Q^{+} \cup\{0\}$.
(i) Find the special features enjoyed by row matrix coefficient polynomials.
(ii) Find non associative sublinear algebras of T over S .
(iii) Is T quasi simple?
(iv) Can T be written as a direct sum of non associative semilinear subalgebras?
27. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{t}_{1} \\ \mathrm{t}_{2} \\ \vdots \\ \mathrm{t}_{15}\end{array}\right]\right., \mathrm{t}_{\mathrm{j}} \in \mathrm{Z}^{+} \cup\{0\}\right.$, *, (7, 2),
$1 \leq \mathrm{j} \leq 15\}$ be a non associative semilinear algebra over the semifield $\mathrm{S}=\mathrm{Z}^{+} \cup\{0\}$.
(i) Find all interesting features enjoyed by M.
(ii) Can M be written as a pseudo direct sum of non associative semilinear subalgebras?
28. Let $W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ll}t_{1} & t_{2} \\ t_{3} & t_{4}\end{array}\right]\right.\right.$ where $t_{j} \in Z^{+} \cup\{0\}$, *, $(3,20), 1 \leq \mathrm{j} \leq 4\}$ be a non associative semilinear algebra of square matrix coefficient polynomials.
(i) Is W quasi simple?
(ii) Write W as a direct sum! (Is it possible).
(iii) Define $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{W}$ so that $\mathrm{T}^{-1}$ exists. ( T a semilinear operator on W).
29. Let $\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{ccc}\mathrm{m}_{1} & \mathrm{~m}_{2} & \mathrm{~m}_{3} \\ \mathrm{~m}_{4} & \mathrm{~m}_{5} & \mathrm{~m}_{6} \\ \mathrm{~m}_{7} & \mathrm{~m}_{8} & \mathrm{~m}_{9} \\ \mathrm{~m}_{10} & \mathrm{~m}_{11} & \mathrm{~m}_{12} \\ \mathrm{~m}_{13} & \mathrm{~m}_{14} & \mathrm{~m}_{15} \\ \mathrm{~m}_{16} & \mathrm{~m}_{17} & \mathrm{~m}_{18}\end{array}\right] \mathrm{m}_{\mathrm{j}} \in \mathrm{Q}^{+} \cup\right.\right.$
$\left.\{0\},^{*},(0,19), 1 \leq \mathrm{j} \leq 18\right\}$ be a matrix coefficient polynomial non associative semilinear algebra over the semifield $S=Q^{+} \cup\{0\}$.
(i) Prove V is not quasi simple.
(ii) Find semilinear subalgebras of V over S .
(iii) Can V be written as a direct sum?
30. Obtain some special and interesting features enjoyed by strong non associative semilinear algebra defined over the field F .
31. Distinguish between strong non associative semilinear algebras and non associative semilinear algebras.
32. Let $\mathrm{V}=\left\{\mathrm{Q},{ }^{*},(3,0)\right\}$ be a strong non associative semilinear algebra over Q .
(i) Is it possible to write V as direct sum?
(ii) Can V be written as a direct sum?
33. Let $\mathrm{W}=\{\mathrm{R}, *,(8,8)\}$ be a strong non associative semilinear algebra over Q .
(i) Is W quasi simple?
(ii) Can W be written as a pseudo direct sum of semilinear subalgebras?
(iii) Find strong non associative semilinear subalgebras of W .
(iv) Find $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{W}$ so that $\mathrm{T}^{-1}$ does not exist.
34. Let $\mathrm{P}=\{\mathrm{R}, *,(13,0)\}$ be a strong non associative semilinear algebra over the field $R$.
(i) Is P quasi simple?
(ii) Prove P is non commutative?
(iii) Does P contain strong non associative semilinear subalgebras?
35. Let $S=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}, a_{5}\right) \mid a_{i} \in R, 1 \leq i \leq 5, *,(3,2)\right\}$ be $a$ strong non associative semilinear algebra over the field R.
(i) Can R be written as direct sum of subsemilinear algebras?
36. Let $\mathrm{M}=\left\{\left.\left[\begin{array}{c}\mathrm{p}_{1} \\ \mathrm{p}_{2} \\ \vdots \\ \mathrm{p}_{15}\end{array}\right] \right\rvert\, \mathrm{p}_{\mathrm{j}} \in \mathrm{Q}, 1 \leq \mathrm{i} \leq 15, *,(5,5)\right\}$ be a strong non associative semilinear algebra over the field Q .
(i) Show M is quasi simple.
(ii) Is $P=\left\{\left.\begin{array}{c}\left.\left.\left[\begin{array}{c}a \\ a \\ \vdots \\ \mathrm{a}\end{array}\right] \right\rvert\, \mathrm{a} \in \mathrm{Q}, *,(5,5)\right\} \subseteq \mathrm{M} \text { a strong non }, ~\end{array} \right\rvert\,\right.$ associative semilinear subalgebra of M over Q ?
37. Let
$P=\left\{\left(\left.\left[\begin{array}{llll}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right] \right\rvert\, a_{i} \in Q, 1 \leq i \leq 16, *,(3,2)\right\}\right.$ be a strong non associative square matrix semilinear algebra over the field Q .
(i) Find all special features enjoyed by P .
(ii) Is P quasi simple?
(iii) Can P be written as a direct sum?
(iv) Can P be written as a pseudo direct sum?
38. Let
$W=\left\{\left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30} \\ a_{31} & a_{32} & \ldots & a_{40}\end{array}\right] \right\rvert\, a_{i} \in Q, 1 \leq i \leq 40, *,(7,0)\right\}$
be a strong non associative semilinear algebra over the field Q .
(i) Is W quasi simple?
(ii) Can W be expressed as a direct sum of strong non associative semilinear subalgebras?
(iii) Find a subsemilinear subalgebras of W.
39. Let
$T=\left\{\left.\begin{array}{llll}{\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{8} \\ a_{9} & a_{10} & \ldots & a_{16} \\ a_{17} & a_{18} & \ldots & a_{24} \\ a_{25} & a_{26} & \ldots & a_{32} \\ a_{33} & a_{34} & \ldots & a_{40} \\ a_{41} & a_{42} & \ldots & a_{48} \\ a_{49} & a_{50} & \ldots & a_{56} \\ a_{57} & a_{58} & \ldots & a_{64} \\ a_{65} & a_{66} & \ldots & a_{72}\end{array} ~\right.}\end{array} \right\rvert\, \begin{array}{l}\left.a_{j} \in R, 1 \leq j \leq 72, *,(3,3)\right\} \\ \end{array}\right.$ be a strong non associative semilinear algebra over Q .
(i) Prove T is commutative.
(ii) Prove T is non associative.
(iii) Prove T is quasi simple.
(iv) Find a subsemilinear algebra of T over Q .
40. Let $W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Q, *,(2,0)\right\}$ be a strong non associative semilinear algebra over Q .
(i) Is W quasi simple?
(ii) Find a semilinear subalgebra of W over Q .
(iii) Can W be written as pseudo direct sum of semilinear subalgebras?
41. Let $M=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i}=\left(d_{1}, d_{2}, d_{3}, \ldots, d_{7}\right)\right.$ where $d_{j} \in Q$, $1 \leq \mathrm{j} \leq 7, *,(7,7)\}$ be a strong row matrix coefficient polynomial non associative semilinear algebra over the field Q .
(i) Enumerate all the special features enjoyed by M.
(ii) Prove M is commutative.
(iii) Find M as a direct sum.
42. Let
$S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{c}m_{1} \\ m_{2} \\ m_{3} \\ \vdots \\ m_{20}\end{array}\right]\right., m_{j} \in Q, 1 \leq j \leq 20, *,(10\right.$,
12)\} be a strong non associative semilinear algebra over the field Q .
(i) Prove S is non commutative and non associative.
(ii) Can S be written as a direct sum?
(iii) Does $S$ satisfy any of the special identities?
(iv) Find $\mathrm{T}: \mathrm{S} \rightarrow \mathrm{Q}$ so that T is a linear functional.
(v) Find $\mathrm{T}: \mathrm{S} \rightarrow \mathrm{S}$ so that $\mathrm{T}^{-1}$ exist ( T a semilinear operator).
43. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{lll}\mathrm{d}_{1} & \mathrm{~d}_{2} & \mathrm{~d}_{3} \\ \mathrm{~d}_{4} & d_{5} & d_{6} \\ d_{7} & d_{8} & d_{9} \\ d_{10} & d_{11} & d_{12} \\ d_{13} & d_{14} & d_{15} \\ d_{16} & d_{17} & d_{18}\end{array}\right]\right., \mathrm{d}_{\mathrm{j}} \in \mathrm{Q}, 1 \leq \mathrm{j} \leq\right.$
$\left.18,{ }^{*},(10,0)\right\}$ be a strong non associative semilinear algebra over the field Q .
(i) Find strong non associative semilinear subalgebras of M.
(ii) Prove M is non commutative.
(iii) Find $\mathrm{f}: \mathrm{M} \rightarrow \mathrm{Q}$ a linear functional.
(iv) Find the structure of $\mathrm{Hom}_{\mathrm{Q}}(\mathrm{M}, \mathrm{Q})$.
(v) Find the structure of $\mathrm{Hom}_{\mathrm{Q}}(\mathrm{M}, \mathrm{M})$.
44. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}\mathrm{d}_{1} & \mathrm{~d}_{2} & \mathrm{~d}_{3} & \mathrm{~d}_{4} \\ \mathrm{~d}_{5} & \mathrm{~d}_{6} & \mathrm{~d}_{7} & \mathrm{~d}_{8} \\ \mathrm{~d}_{9} & d_{10} & d_{11} & d_{12} \\ \mathrm{~d}_{13} & d_{14} & d_{15} & d_{16}\end{array}\right]\right., \mathrm{d}_{\mathrm{i}} \in \mathrm{R}, 1 \leq\right.$
$\left.\mathrm{i} \leq 16,{ }^{*},(3,3)\right\}$ be strong non associative semilinear algebra over the field R .
(i) Find substructures of P .
(ii) Is P quasi simple?
(iii) Prove P is commutative.
(iv) Find $f: P \rightarrow R$ a linear functional.
(v) Find T: $\mathrm{P} \rightarrow \mathrm{P}$; T a linear operator on P .
45. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}\mathrm{d}_{1} & \mathrm{~d}_{2} & \mathrm{~d}_{3} & \mathrm{~d}_{4} \\ \mathrm{~d}_{5} & \mathrm{~d}_{6} & \mathrm{~d}_{7} & \mathrm{~d}_{8} \\ \vdots & \vdots & \vdots & \vdots \\ \mathrm{~d}_{37} & \mathrm{~d}_{38} & \mathrm{~d}_{39} & \mathrm{~d}_{40}\end{array}\right]\right., \mathrm{d}_{\mathrm{j}} \in \mathrm{Q}, 1 \leq\right.$ $\left.\mathrm{j} \leq 40,{ }^{*},(20,1)\right\}$ be strong non associative semilinear algebra over the field Q.
(i) Show S is quasi simple.
(ii) Find $\operatorname{Hom}_{\mathrm{Q}}(\mathrm{S}, \mathrm{Q})$, (that is $\mathrm{L}(\mathrm{S}, \mathrm{Q})$ ).
(iii) Find $\operatorname{Hom}_{\mathrm{Q}}(\mathrm{S}, \mathrm{S})$.
46. Let $P=\left\{a_{i} \in Z_{11},(3,7), *\right\}$ be a strong non associative semilinear algebra over the field $Z_{11}$.
(i) Prove P is finite.
(ii) Does P have subsemilinear algebras?
(iii) Can P be written as direct sum?
47. Let $S=\left\{a_{i} \mid a_{i} \in Z_{23}, *,(3,0)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{23}$.
(i) Find order of S. (Is o(S) = 23?).
(ii) Is S commutative?
(iii) Find subsemilinear algebras of S .
(iv) Find $\mathrm{f}: \mathrm{S} \rightarrow \mathrm{Z}_{23}$ a linear functional.
(v) Find $\mathrm{T}: \mathrm{S} \rightarrow \mathrm{S}$ a linear operator on S so that $\mathrm{T}^{-1}$ exist.
(vi) Find $\operatorname{Hom}_{Z_{23}}\left(\mathrm{~S}, \mathrm{Z}_{23}\right)$.
48. Let $\mathrm{M}=\left\{\mathrm{a}_{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{19},{ }^{*}\right.$, $\left.(3,13)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{19}$.
(i) Find $\operatorname{Hom}_{Z_{19}}(\mathrm{M}, \mathrm{M})$.
(ii) Find $\operatorname{Hom}_{Z_{19}}\left(\mathrm{M}, \mathrm{Z}_{19}\right)$.
(iii) Find substructures in M.
(iv) Does M satisfy any of the special identities?
49. Let $\mathrm{P}=\left\{\mathrm{a}_{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{43}, *,(7,0)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{43}$.
(i) Find $\operatorname{Hom}_{Z_{43}}(P, P)$.
(ii) Prove P is non commutative.
(iii) Find a subsemilinear algebra of P (Is it possible?)
(iv) Does P satisfy any of the special identities?
50. Let $P=\left\{\left(a_{1}, a_{2}, a_{3}, \ldots, a_{8}\right) \mid a_{i} \in Z_{7}, *,(4,4)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{7}$.
(i) Find any of the special properties enjoyed by P .
(ii) Is P commutative?
51. Let $S=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}, a_{5}\right) \mid a_{i} \in Z_{11}, *,(9,0)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{11}$.
(i) Prove S is non commutative.
(ii) Find a strong non commutative semilinear subalgebra of $S$ over $Z_{11}$.
52. Let $\mathrm{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{71}, 1 \leq \mathrm{i} \leq 3,{ }^{*},(43,29)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{71}$.
(i) Prove M is non commutative.
(ii) Is $\mathrm{T}=\left\{(\mathrm{a}, \mathrm{a}, \mathrm{a}) \mid \mathrm{a} \in \mathrm{Z}_{71}, *,(43,29)\right\} \subseteq \mathrm{M}$ a string non associative semilinear subalgebra of M over $\mathrm{Z}_{71}$ ?
53. Obtain some nice properties enjoyed by strong non associative semilinear algebras built over the prime field $\mathrm{Z}_{\mathrm{p}}$.
54. Let $W=\left\{\left.\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{15}\end{array}\right] \right\rvert\, a_{i} \in Z_{13}, 1 \leq i \leq 15, *,(9,5)\right\}$ be a
strong non associative semilinear algebra defined over the field $\mathrm{Z}_{13}$.
(i) Does W satisfy any of the special identities?
(ii) Find a strong non associative semilinear subalgebra of W over $\mathrm{Z}_{13}$.
 strong non associative semilinear subalgebra of W ? Justify your claim.
55. Let $S=\left\{\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{9}\end{array}\right]\left|\begin{array}{c}a_{i}\end{array}\right| \begin{aligned} & 2, *,(1,0)\} \text { be a strong non }\end{aligned}$ associative semilinear algebra defined over the field $Z_{2}$.
(i) Find number of elements in S .
(ii) Can S have strong non associative semilinear subalgebras?
(iii) Does S satisfy any of the special identities?
(iv) Is $\mathrm{T}=\left\{\left(\left[\begin{array}{c}1 \\ 1 \\ 1 \\ \vdots \\ 1\end{array}\right], \left.\left[\begin{array}{c}0 \\ 0 \\ 0 \\ \vdots \\ 0\end{array}\right] \right\rvert\, *,(1,0)\right\} \subseteq \mathrm{S}\right.$ a strong non
associative semilinear subalgebra? Justify.
56. Let
$S=\left\{\left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{6} \\ a_{7} & a_{8} & \ldots & a_{12} \\ a_{13} & a_{14} & \ldots & a_{18} \\ a_{19} & a_{20} & \ldots & a_{24}\end{array}\right] \right\rvert\, a_{i} \in Z_{3}, 1 \leq i \leq 24, *,(2,3)\right\}$
be a strong non associative semilinear algebra defined over the field $Z_{3}$.
(i) Find the order of S.
(ii) Find strong non associative semilienar subalgebras of $S$ over $Z_{3}$.
(iii) Does $S$ satisfy any of the special identities?
(iv) Find $\operatorname{Hom}_{Z_{3}}(S, S)$.
57. Let
$P=\left\{\left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{13} \\ a_{14} & a_{15} & \ldots & a_{26} \\ a_{27} & a_{28} & \ldots & a_{39} \\ a_{40} & a_{41} & \ldots & a_{52}\end{array}\right] \right\rvert\, a_{i} \in Z_{5}, 1 \leq i \leq 52, *,(3,3)\right\}$
be a strong non associative semilinear algebra defined over the field $Z_{5}$.
(i) Prove P is commutative.
(ii) Find subsemilinear algebras of P .
(iii) What is the order of P ?
(iv) Find $\mathrm{L}\left(\mathrm{P}, \mathrm{Z}_{5}\right)$.
(v) Find a semilinear operator $\mathrm{T}: \mathrm{V} \rightarrow \mathrm{V}$ such that $\mathrm{T}^{-1}$ exists.
(vi) If T, S, R are semilinear operators on S will be composition ( T o S ) o $\mathrm{R}=\mathrm{To}(\mathrm{S} \circ \mathrm{R})$ ?
58. Let $\mathrm{T}=\left\{\left.\left[\begin{array}{ccccc}\mathrm{a}_{1} & a_{2} & a_{3} & a_{4} & a_{5} \\ a_{6} & a_{7} & \ldots & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & \ldots & a_{15} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ a_{96} & a_{97} & a_{98} & a_{99} & a_{100}\end{array}\right] \right\rvert\, a_{i} \in Z_{3}, 1 \leq \mathrm{i} \leq\right.$
$\left.100,{ }^{*},(2,2)\right\}$ be a strong non associative semilinear algebra defined over the field $\mathrm{Z}_{3}$.
(i) Find order of T .
(ii) Is T a strong non associative idempotent semilinear algebra over $\mathrm{Z}_{3}$ ?
59. Give an example of a strong non associative semilinear idempotent algebra built using matrices over the field $\mathrm{Z}_{5}$.
60. Does there exist a strong non associative Bol semilinear algebra of matrices built using $\mathrm{Z}_{13}$ ?
61. Does there exist a strong non associative Moufang semilinear algebra of matrices built using $\mathrm{Z}_{7}$ ?
62. Does there exist a strong non associative P-semilinear algebra of matrices built using $\mathrm{Z}_{19}$ ?
63. Does there exists a strong non associative alternative semilinear algebra built using matrices over $\mathrm{Z}_{11}$ ?
64. Does there exist a strong non associative left alternative semilinear algebra built using $\mathrm{Z}_{43}$ ?
65. Let
$M=\left\{\left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{5} \\ a_{6} & a_{7} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{15} \\ a_{16} & a_{17} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{25}\end{array}\right] \right\rvert\, a_{i} \in Z_{41}, 1 \leq i \leq 25,{ }^{*},(3,29)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{41}$.
(i) Is M finite?
(ii) Is M commutative?
(iii) Find strong non associative semilinear linear subalgebras of M .
(iv) Find $\operatorname{Hom}_{Z_{41}}(M, M)$.
(v) Find L (M, $\mathrm{Z}_{41}$ ).
66. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{11}\right.$, ,,$\left.(3,7)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{11}$.
(i) Prove T is infinite.
(ii) Prove T is non commutative.
67. Find all interesting properties associated with $\mathrm{S}=$ $\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Z_{p}\right.$ (p a prime), (t, u); *, $\left.t, u \in Z_{p}\right\}$, the strong non associative field $\mathrm{Z}_{\mathrm{p}}$.
68. Let $W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \mid a_{i} \in Z_{3} \quad *,(2,1)\right\}$ be the strong non associative polynomial semilinear algebra over $\mathrm{Z}_{3}$.
(i) Is W commutative?
(ii) Find semilinear subalgebras of W over $\mathrm{Z}_{3}$.
69. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{2}, *,(1,0)\right\}$ be the strong non associative semilinear algebra over the field $\mathrm{Z}_{2}$.
(i) Show S is non commutative.
(ii) Does S have strong non associative semilinear subalgebras?
70. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{m}_{1}, \mathrm{~m}_{2}, \mathrm{~m}_{3}, \mathrm{~m}_{4}\right), \mathrm{m}_{\mathrm{i}} \in \mathrm{Z}_{5}\right.$, , *, (2, 2), $1 \leq \mathrm{i} \leq 4\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{5}$.
(i) Prove M is commutative.
(ii) Is M quasi simple?
(iii) Find subsemilinear algebra of M.
71. Let $\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{p}_{1}, \mathrm{p}_{2}, \ldots, \mathrm{p}_{10}\right) ; \mathrm{p}_{\mathrm{j}} \in \mathrm{Z}_{3}, 1 \leq \mathrm{j} \leq 10\right.$, *, $(2,1)\}$ be a strong non associative semilinear algebra over the field $Z_{3}$.
(i) Show V is non commutative.
(ii) Find $\operatorname{Hom}_{Z_{3}}(V, V)=T$.
(iii) Is T a non associative algebraic structure?
72. Obtain some interesting properties enjoyed by strong non associative semilinear algebras defined over $\mathrm{Z}_{\mathrm{p}}$, p a prime.
73. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{m}_{1}, \mathrm{~m}_{2}, \mathrm{~m}_{3}\right) ; \mathrm{m}_{\mathrm{i}} \in \mathrm{Z}_{71}, 1 \leq \mathrm{i} \leq 3\right.$, *, $(0,8)\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{71}$.
(i) Find $1\left(\mathrm{~S}, \mathrm{Z}_{71}\right)=\mathrm{P}$.
(ii) Is P a non associative structure?
74. Let $W=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, \quad a_{i}=\left[\begin{array}{c}m_{1} \\ m_{2} \\ \vdots \\ m_{20}\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{23}, 1 \leq \mathrm{j} \leq 20\right.$, *,
$(11,13)\}$ be a strong non associative semilinear algebra over the field $\mathrm{F}=\mathrm{Z}_{23}$.
(i) Find substructures of W.
(ii) Show W is non commutative.
(iii) Find L(W, $\mathrm{Z}_{23}$ ).
75. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{t}_{1} \\ \mathrm{t}_{2} \\ \vdots \\ \mathrm{t}_{8}\end{array}\right]\right. ; \mathrm{t}_{\mathrm{j}} \in \mathrm{Z}_{7}, 1 \leq \mathrm{j} \leq 8, *,(2,6)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{F}=\mathrm{Z}_{7}$.
(i) Show P satisfies the idemponent identity.
(ii) Find subsemi linear algebra of P .
(iii) Find $\operatorname{Hom}_{\mathrm{Z}_{7}}(\mathrm{P}, \mathrm{P})$.
76. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left(\begin{array}{c}\mathrm{m}_{1} \\ \mathrm{~m}_{2} \\ \mathrm{~m}_{3} \\ \mathrm{~m}_{4}\end{array}\right)\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{5}, 1 \leq \mathrm{j} \leq 4, *,(2,0)\right\}$ be a strong non associative semilinear algebra over the field $Z_{5}$.
(i) Show P is non commutative.
(ii) Does P satisfy any of the special identities?
(iii) Find $\operatorname{Hom}_{Z_{5}}(\mathrm{P}, \mathrm{P})$.
77. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{ccc}\mathrm{m}_{1} & \mathrm{~m}_{2} & \mathrm{~m}_{3} \\ \mathrm{~m}_{4} & \mathrm{~m}_{5} & \mathrm{~m}_{6} \\ \mathrm{~m}_{7} & \mathrm{~m}_{8} & \mathrm{~m}_{9}\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{3}, 1 \leq \mathrm{j} \leq\right.$
$9, *,(2,2)\}$ be a strong non associative semilinear algebra over the field $Z_{3}$.
(i) Prove M is commutative.
(ii) Prove M is a strong non associative idempotent semilinear algebra over the field $\mathrm{Z}_{3}$.
(iii) Find $L_{Z_{3}}\left(M, Z_{3}\right)$.
78. Let $S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccc}d_{1} & \ldots & d_{9} \\ d_{10} & \ldots & d_{18} \\ \vdots & \vdots & \vdots \\ d_{73} & \ldots & d_{81}\end{array}\right]\right. ; d_{j} \in Z_{11}, 1 \leq j \leq\right.$

81, *, (9, 3)\} be a strong non associative semilinear algebra over the field $\mathrm{Z}_{11}$.
(i) Does S satisfy any of the special identities?
(ii) Is S commutative?
(iii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{Z}_{11}}(\mathrm{~S}, \mathrm{~S})$.
79. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \quad \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{ccc}\mathrm{m}_{1} & \mathrm{~m}_{2} & \mathrm{~m}_{3} \\ \mathrm{~m}_{4} & \mathrm{~m}_{5} & \mathrm{~m}_{6} \\ \vdots & \vdots & \vdots \\ \mathrm{~m}_{28} & \mathrm{~m}_{29} & \mathrm{~m}_{30}\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{23}, 1 \leq \mathrm{j}\right.$ $\left.\leq 30,{ }^{*},(3,7)\right\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{23}$.
(i) Does T satisfy any of the special identities?
(ii) Is T commutative?
(iii) Find the algebraic structure of $\mathrm{L}\left(\mathrm{T}, \mathrm{Z}_{23}\right)$.
80. Let $P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{cccc}d_{1} & d_{2} & \ldots & d_{20} \\ d_{21} & d_{22} & \ldots & d_{40}\end{array}\right]\right. ; \mathrm{d}_{\mathrm{j}} \in \mathrm{Z}_{19}, 1 \leq \mathrm{j}\right.$ $\leq 40, *,(3,17)\}$ be a strong non associative semilinear algebra over the field $\mathrm{Z}_{19}$.
(i) Is P commutative?
(ii) Does P satisfy any of the special identities?
(iii) Can P have subsemilinear algebras?
(iv) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{T}, \mathrm{Z}_{23}\right)$.
81. Let $V=\left\{a_{i} \mid a_{i} \in Z_{6},(3,5), *\right\}$ be a $S$-non associative semilinear algebra over the S -ring $\mathrm{Z}_{6}$.
(i) Find order of V.
(ii) Can V satisfy any of the special identities?
82. Let $\mathrm{V}=\left\{\mathrm{a}_{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{12}\right.$, $\left.{ }^{*},(7,6)\right\}$ be a S -non associative semilinear algebra.
(i) Find the special properties enjoyed by V.
(ii) Prove V is an S-non associative P-semilinear algebra.
(iii) Prove V is a S -string non associative Bol semilinear algebra.
(iv) Does V contain S non associative semilinear algebras?
83. Let $\mathrm{V}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{22}, *,(7,16)\right\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{22}$.
(i) Does V satisfy any of the special identities?
(ii) Can S have subsemilinear algebras which does not satisfy any of the special identities?
(iii) Find the algebraic structure of $\operatorname{Hom}_{\mathrm{Z}_{22}}(\mathrm{~V}, \mathrm{~V})$.
(iv) If $\mathrm{W}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{22},{ }^{*},(3,20)\right\}$ a $S$-non associative semilinear algebra over the S -ring find $\operatorname{Hom}_{Z_{12}}(V, W)$.
84. Let
$\mathrm{V}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{10},(3,8), *\right\}$ and $\mathrm{W}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{10}\right.$,,$\left.(7,4)\right\}$ be two $S$-non associative semilinear algebras over the $S$ $\operatorname{ring} \mathrm{Z}_{10}$.
(i) Find $\operatorname{Hom}_{\mathrm{Z}_{10}}(\mathrm{~V}, \mathrm{~W})=\mathrm{T}$.
(ii) Find $\operatorname{Hom}_{Z_{10}}(\mathrm{~W}, \mathrm{~V})=\mathrm{S}$.
(iii) Can T and S be related in any way?
(iv) Can V and W satisfy the same special identity? Justify.
85. Let $\mathrm{W}=\left\{\mathrm{a} \mid \mathrm{a} \in \mathrm{Z}_{86}\right.$, ${ }^{*}$, (7, 12) $\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{86}$.
(i) Find $\operatorname{Hom}_{Z_{86}}$ (W, W).
(ii) Find $\mathrm{L}\left(\mathrm{W}, \mathrm{Z}_{86}\right)$.
(iii) Does W satisfy any of the special identities?
(iv) Prove $o(W)=86$.
86. Let $P=\left\{\left(a_{1}, a_{2}, a_{3}, a_{4}\right) \mid a_{i} \in Z_{12}, 1 \leq i \leq 4, *,(6,7)\right\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Prove P satisfies all the five 5 special identities, Bol, Moufang, P , idempotent and alternative.
(ii) Find $\operatorname{Hom}_{Z_{12}}(\mathrm{P}, \mathrm{P})$.
(iii) Find order of P .
87. Let $\mathrm{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{12}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{10}\right.$, $\left.{ }^{*}, 1 \leq \mathrm{i} \leq 12,(5,6)\right\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{10}$.
(i) Find the special identities satisfies by M.
(ii) Find L ( $\mathrm{M}, \mathrm{Z}_{10}$ ).
88. Let $R=\left\{\left(a_{1}, a_{2}, \ldots, a_{10}\right) \mid a_{i} \in Z_{15}, 1 \leq i \leq 10\right.$, *, (3, 3) $\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Is R commutative?
(ii) Does R satisfy any of the known special identities?
(iii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{Z_{15}}(\mathrm{M}, \mathrm{M})$.
89. Let $T=\left\{\left(a_{1}, a_{2}, \ldots, a_{7}\right) \mid a_{i} \in Z_{6}, *,(4,3)\right\}$ be a non associative semilinear algebra over the $S$-ring $\mathrm{Z}_{6}$.
(i) Is T commutative?
(ii) Does T satisfy any of the special identities?
(iii) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{T}, \mathrm{Z}_{6}\right)$.
90. Let $\left.\left.S=\left\{\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{12}\end{array}\right] \right\rvert\, a_{i} \in Z_{12}, 1 \leq i \leq 12, *,(4,9)\right\}$ be a S-non associative smilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Find the order of S.
(ii) Does S satisfy any of the special identities?
(iii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{Z_{12}}(S, S)$.
(iv) Can S be written as a direct sum of S -non associative semilinear subalgebras of S over $\mathrm{Z}_{12}$ ?
 non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Find the special identities that are true on P .
(ii) Prove P is a S-non associative idempotent semilinear algebra over $\mathrm{Z}_{15}$.
(iii) Find L (P, $\mathrm{Z}_{15}$ ).
92. Let $W=\left\{\left.\left[\begin{array}{l}a_{1} \\ a_{2} \\ a_{3} \\ a_{4}\end{array}\right] \right\rvert\, a_{i} \in Z_{6}, 1 \leq i \leq 4, *,(3,4)\right\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{6}$.
(i) Find $\operatorname{Hom}_{\mathrm{Z}_{6}}(\mathrm{~W}, \mathrm{~W})$.
(ii) Is W a S-non associative strong Bol semilinear algebra?
(iii) Can W be written as a direct sum?
93. Let $\mathrm{M}=\left\{\left.\left\{\begin{array}{ccccc}a_{1} & a_{2} & a_{3} & \ldots & a_{11} \\ a_{12} & a_{13} & a_{14} & \ldots & a_{22} \\ a_{23} & a_{24} & a_{25} & \ldots & a_{33}\end{array}\right] \right\rvert\, a_{i} \in Z_{12}, 1 \leq i \leq 33\right.$, *, $(3,10)\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Prove M is an S -non associative idempotent semilinear algebra.
(ii) Does M satisfy any of the special identities?
(iii) Will M be a S-non associative strong Bol semilinear algebra over $\mathrm{Z}_{12}$ ?
94. Let $\left.M=\left\{\begin{array}{ccccc}a_{1} & a_{2} & a_{3} & a_{4} & a_{5} \\ a_{6} & a_{7} & a_{8} & a_{9} & a_{10} \\ \vdots & \vdots & \vdots & \ldots & \vdots \\ a_{96} & a_{97} & a_{98} & a_{99} & a_{100}\end{array}\right] \right\rvert\, a_{i} \in Z_{15}, 1 \leq i \leq$
$100, *,(12,4)\}$ be a non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Does M satisfy any of the special identities?
(ii) Find $\operatorname{Hom}_{\mathrm{Z}_{15}}(\mathrm{M}, \mathrm{M})$.
(iii) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{M}, \mathrm{Z}_{15}\right)$.
95. Let $\mathrm{M}=\left\{\left.\begin{array}{l}{\left.\left[\begin{array}{llll}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right] \right\rvert\, a_{i} \in Z_{42}, 1 \leq i \leq 16 \text {, *, }}\end{array} \right\rvert\,\right.$ (20,23)\} be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{42}$.
(i) Does M satisfy any of the special identities?
(ii) Prove M is an idempotent S -non associative semilinear algebra over the S-ring $\mathrm{Z}_{42}$.
(iii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{Z}_{42}}(\mathrm{M}, \mathrm{M})$.
(iv) Find the algebraic structure enjoyed by $L\left(M, Z_{42}\right)$.
96. Let $\mathrm{M}=\left\{\left.\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Z}_{10}, 1 \leq \mathrm{i} \leq 4,{ }^{*},(5,6)\right\}$ be a $S$ non associative semilinear algebra over the S -ring $\mathrm{Z}_{10}$.
(i) Find the order of M.
(ii) Can M have subsemilinear algebras?
(iii) Prove M is a S-non associative idempotent semilinear algebra.
(iv) Can M satisfy any special identity?
(v) Can $M$ be written as a direct sum of substructures?
(vi) Find $\mathrm{f}: \mathrm{M} \rightarrow \mathrm{Z}_{10}$, f is non trivial.
97. Let $P=\left\{\begin{array}{llll}{\left.\left[\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{5} \\ a_{6} & a_{7} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{15} \\ a_{16} & a_{17} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{25}\end{array}\right] \right\rvert\, a_{i} \in Z_{33}, 1 \leq i \leq 25, * \text {, }, \text {, } 10}\end{array}\right.$
$(16,18)\}$ be a S-non associative semilinear algebra of square matrices.
(i) Is P an idempotent S -non associative semilinear algebra?
(ii) Find $\operatorname{Hom}_{Z_{33}}(\mathrm{P}, \mathrm{P})$.
(iii) Find $L\left(P, Z_{33}\right)$.
(iv) What is the special features enjoyed by P?
98. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{12}, \quad *,(6,7)\right\}$ be the S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Prove M satisfies special identities.
(ii) Find $\mathrm{T}: \mathrm{M} \rightarrow \mathrm{M}$ so that $\mathrm{T}^{-1}$ exists.
(iii) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{M}, \mathrm{Z}_{12}\right)$.
(iv) Find any special difference between $M$ and usual polynomial $\mathrm{Z}_{12}[\mathrm{x}]$.
99. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{46}, \quad *,(2,2)\right\}$ be the S -non associative semilinear algebra over the $S$-ring $Z_{46}$.
(i) Prove T is commutative.
(ii) Find $\operatorname{Hom}_{Z_{46}}(T, T)$.
(iii) What is the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{T}, \mathrm{Z}_{46}\right)$ ?
(iv) Does T satisfy any of the special identities?
100. Let $\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{25}, \quad *\right.$, (10, 5) $\}$ be the S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{25}$.
(i) Find all the special identities satisfied by V .
(ii) Prove V is not a S -non associative semilinear idempotent algebra over $\mathrm{Z}_{25}$.
(iii) Find $\operatorname{Hom}_{Z_{25}}(\mathrm{~V}, \mathrm{~V})$.
101. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{i}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{12}, \quad *\right.$, (4, 9) $\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{Z}_{12}}(\mathrm{P}, \mathrm{P})$.
(ii) Prove P satisfies several special identities.
102. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{15}, \quad *,(11,0)\right\}$ be a $S$-non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Find $\mathrm{L}_{\mathrm{Z}_{15}}(\mathrm{~T}, \mathrm{~T})$.
(ii) Which of the special identities are satisfied by T ?
(iii) Prove T is non commutative.
103. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \mathrm{~d}_{2}, \mathrm{~d}_{3}, \mathrm{~d}_{4}\right) ; \mathrm{d}_{\mathrm{j}} \in \mathrm{Z}_{12}, \quad *,(8,0)\right.$, $1 \leq \mathrm{j} \leq 4\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Prove S is non commutative.
(ii) Find $\operatorname{Hom}_{\mathrm{Z}_{12}}(\mathrm{~S}, \mathrm{~S})$.
(iii) Find the special identities satisfied by S .
104. Let $\mathrm{W}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \mathrm{~d}_{2}, \ldots, \mathrm{~d}_{\mathrm{q}}\right) ; \mathrm{d}_{\mathrm{j}} \in \mathrm{Z}_{15}, *,(10,6)\right\}$ be a S-non associative semilinear algebra over the S-ring $\mathrm{Z}_{15}$. Prove W satisfies several of the special identities.
105. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{t}_{1} \\ \mathrm{t}_{2} \\ \vdots \\ \mathrm{t}_{20}\end{array}\right]\right. ; \mathrm{t}_{\mathrm{j}} \in \mathrm{Z}_{6}, 1 \leq \mathrm{j} \leq 20, *,(4,3)\right\}$
be a S-non associative semilinear algebra over the S-ring $\mathrm{Z}_{6}$.
(i) Is M a S-strong bol semilinear algebra?
(ii) Find $\operatorname{Hom}_{Z_{6}}(M, M)$.
(iii) Is M an S -strong idempotent semilinear algebra?
106. Let $P=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{l}t_{1} \\ t_{2} \\ t_{3} \\ t_{4} \\ t_{5}\end{array}\right]\right. ; t_{j} \in Z_{21}, \quad 1 \leq j \leq 5, *,(10\right.$,
12)\} be a S-non associative semilinear algebra over the $S$ ring P .
(i) Find $\operatorname{Hom}_{Z_{21}}(\mathrm{P}, \mathrm{P})=\mathrm{S}$, what is the algebraic structure enjoyed by S .
(ii) Prove P is non commutative.
(iii) Does P satisfy any of the special identities?
107. Let $S=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{ccc}d_{1} & d_{2} & d_{3} \\ d_{4} & d_{5} & d_{6} \\ \vdots & \vdots & \vdots \\ d_{28} & d_{29} & d_{30}\end{array}\right]\right. ; d_{j} \in Z_{15}\right.$, *, (4,
12), $1 \leq \mathrm{j} \leq 30\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Is S-commutative?
(ii) Does S satisfy any of the special identities?
(iii) Find L (S, $\mathrm{Z}_{15}$ ).
(iv) Study the algebraic structure enjoyed by $\operatorname{Hom}_{Z_{15}}(S, S)$.
108. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}\mathrm{m}_{1} & \mathrm{~m}_{2} & \ldots & \mathrm{~m}_{10} \\ \mathrm{~m}_{11} & \mathrm{~m}_{12} & \ldots & \mathrm{~m}_{20} \\ \mathrm{~m}_{21} & \mathrm{~m}_{22} & \ldots & \mathrm{~m}_{30}\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{12}\right.$, *,
(6, 4), $1 \leq \mathrm{j} \leq 30\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Does P satisfy any of the special identities?
(ii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{Z}_{12}}(\mathrm{P}, \mathrm{P})$.
(iii) Is P commutative?
(iv) Does P enjoy any other special features?
109. Let $T=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{i}=\left[\begin{array}{lll}d_{1} & d_{2} & d_{3} \\ d_{4} & d_{5} & d_{6} \\ d_{7} & d_{8} & d_{9}\end{array}\right]\right. ; d_{j} \in Z_{15}, *,(2,0)\right.$,
$1 \leq \mathrm{j} \leq 9\}$ be a S-non associative semilinear algebra over the S -ring $\mathrm{Z}_{15}$. Study and describe all the special features enjoyed by T.
110. Let $S=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} x^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}\mathrm{m}_{1} & \mathrm{~m}_{2} & \ldots & \mathrm{~m}_{6} \\ \mathrm{~m}_{7} & \mathrm{~m}_{8} & \ldots & \mathrm{~m}_{12} \\ \vdots & \vdots & & \vdots \\ \mathrm{~m}_{31} & \mathrm{~m}_{32} & \ldots & \mathrm{~m}_{36}\end{array}\right]\right. ; \mathrm{m}_{\mathrm{j}} \in \mathrm{Z}_{6}\right.$, *,
(3, 4), $1 \leq \mathrm{j} \leq 36\}$ be a S -non associative semilinear algebra over the S -ring $\mathrm{Z}_{6}$.
(i) Prove S satisfies several of the special identities.
(ii) Find $\operatorname{Hom}_{Z_{6}}(S, S)$.
(iii) Find $\mathrm{L}\left(\mathrm{S}, \mathrm{Z}_{6}\right)$.
(iv) Is S commutative?
111. Obtain the special features enjoyed by double Smarandache non associative semilinear algebras.
112. Give examples of double Smarandache non associative semilinear algebras.
113. Give an example of a double Smarandache strong Moufang non associative semilinear algebra.
114. Give an example of a double Smarandache strong non associative Bol semilinear algebra.
115. Give examples of double Smarandache strong non associative P -semilinear algebras.
116. Give examples of double Smarandache strong non associative alternative semilinear algebra.
117. Give examples of groupoid rings which are strong non associative linear algebras.
118. Obtain some special, distinct and interesting properties enjoyed by strong non associative linear algebras which are groupoid rings.
119. Obtain some special properties of groupoid rings which satisfy the special identities and which are DS non associative semilinear algebras.
120. Mention the special features enjoyed by matrix groupoid rings FG which are DS non associative semilinear algebras where F is a S -ring.
121. Study the special properties enjoyed by polynomial groupoid rings which are DS non associative semilinear algebras.
122. Find applications of strong non associative semilinear algebras.
123. Find applications of DS non associative semilinear algebras.
 *, $(4,7)\}$ be a matrix groupoid. $\mathrm{S}=\mathrm{Z}_{12}$ be the S -ring. SG be the groupoid ring that is SG is also a DS non associative semilinear algebra over the S -ring $\mathrm{Z}_{12}$.
(i) Does SG satisfy any of the special identities?
(ii) Find $\mathrm{Hom}_{\mathrm{S}}$ (SG, SG).
(iii) Is SG commutative?
(iv) Find any special features enjoyed by SG.
125. Let $G=\left\{\left(\left.\left[\begin{array}{cc}a_{1} & a_{2} \\ a_{3} & a_{4} \\ a_{5} & a_{6} \\ a_{7} & a_{8} \\ a_{9} & a_{10} \\ a_{11} & a_{12} \\ a_{13} & a_{14} \\ a_{15} & a_{16}\end{array}\right] \right\rvert\, a_{i} \in Z_{15}, *, 1 \leq i \leq 16,(11,5), *\right\}\right.$ be
a groupoid and Q be the field. QG the groupoid ring is a strong non associative semilinear algebra over $Q$.
(i) Is QG commutative?
(ii) Find $L(Q G, Q)$.
(iii) Find $\mathrm{Hom}_{\mathrm{S}}(\mathrm{QG}, \mathrm{QG})$.
(iv) Does QG satisfy any of the special identities?
(v) Prove QG is a strong non associative idempotent semilinear algebra over Q .
(vi) Can QG have substructures?
126. Obtain any interesting properties about groupoid rings which are
(i) Strong non associative semilinear algebras over a field.
(ii) DS non associative semilinear algebras over $S=Z_{n}$.
(iii) S - non associative semilinear algebras over a S-ring.
127. Determine some special features enjoyed by non associative linear algebras.
128. Find some interesting properties enjoyed by the non associative linear algebra $L_{n}(m)$, $n$ prime over the field $Z_{n}$.
129. Let $\mathrm{V}=\left\{\mathrm{L}_{17}(8)\right\}$ be a non associative linear algebra over the field $\mathrm{Z}_{17}$.
(i) Does V enjoy any special properties?
(ii) Does V satisfy any special identity?
(iii) Prove V is simple.
130. Let $\mathrm{V}=\left\{\mathrm{L}_{11}(6)\right\}$ be a non associative linear algebra over the field.
(i) Prove $\mathrm{L}_{11}$ (6) is commutative.
(ii) Find the number of basis of V.
131. Let $\mathrm{V}=\mathrm{L}_{43}$ (40) be a non associative linear algebra over the field $\mathrm{Z}_{43}$.
(i) Find the number of basis in V .
(ii) Is V commutative?
(iii) Can V have any substructures?
(iv) Is V simple?
132. Let $V=\left\{\left(a_{1}, a_{2}, \ldots, a_{10}\right) \mid a_{i} \in L_{23}(3) ; 1 \leq i \leq 10\right\}$ be a non associative linear algebra over the field $\mathrm{Z}_{23}$.
(i) How many sets of basis are in V over $\mathrm{Z}_{23}$ ?
(ii) Is V commutative?
(iii) Can V be non associative linear subalgebras over the field $\mathrm{Z}_{23}$ ?
(iv) Find a linear operator T on V so that $\mathrm{T}^{-1}$ exists.
(v) Obtain any other interesting properties associated with V.
133. Let $M=\left\{\left(a_{1}, a_{2}, \ldots, a_{7}\right) \mid a_{i} \in L_{7}(3), 1 \leq i \leq 7, *\right\}$ be a non associative row matrix linear algebra over the field $\mathrm{Z}_{7}$.
(i) Find a basis of M over $\mathrm{Z}_{7}$.
(ii) What is the dimension of M over $\mathrm{Z}_{7}$ ?
(iii) Find non associative linear subalgebras of M over $\mathrm{Z}_{7}$.
(iv) Does M satisfy any of the special identities?
(v) Find $\operatorname{Hom}_{Z_{7}}(M, M)$.
134. Let $P=\left\{\left(a_{1}, a_{2}, a_{3}\right) \mid a_{i} \in L_{47}(3), 1 \leq i \leq 3, *\right\}$ be a non associative row matrix linear algebra over $\mathrm{Z}_{47}$.
(i) Find a basis of P .
(ii) Find dimension of P .
(iii) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{M}, \mathrm{Z}_{7}\right)$.
135. Let $T=\left\{\left.\left[\begin{array}{l}d_{1} \\ d_{2} \\ d_{3}\end{array}\right] \right\rvert\, \mathrm{d}_{\mathrm{i}} \in \mathrm{Z}_{29}\right.$ (3) $\left.{ }^{*}, 1 \leq \mathrm{i} \leq 3\right\}$ be a non associative column matrix linear algebra over the field $Z_{29}$.
(i) Find dimension of T over $\mathrm{Z}_{29}$.
(ii) Is T commutative?
(iii) What is the algebraic structure enjoyed by $\operatorname{Hom}_{Z_{29}}(\mathrm{~T}, \mathrm{~T})$ ?
136. Let $P=\left\{\begin{array}{c}\left.\left.\left[\begin{array}{c}d_{1} \\ d_{2} \\ \vdots \\ d_{12}\end{array}\right] \right\rvert\, d_{j} \in Z_{23}(7), \quad *, 1 \leq j \leq 12\right\} \text { be a non }\end{array}\right.$ associative column matrix linear algebra over the field $\mathrm{Z}_{23}$.
(i) What is dimension of P over $\mathrm{Z}_{23}$ ?
(ii) Does P satisfy any of the special identities?
(iii) Does P contain more than one non associative column matrix linear subalgebra over $\mathrm{Z}_{23}$ ? Justify your claim.
137. Let $W=\left\{\begin{array}{c}\left.\left.\left[\begin{array}{c}d_{1} \\ d_{2} \\ \vdots \\ d_{12}\end{array}\right] \right\rvert\, d_{j} \in L_{19}(10), *, 1 \leq j \leq 12\right\} \text { be a non }, ~\end{array}\right.$ associative column matrix linear algebra over $\mathrm{Z}_{19}$.
(i) What is dimension of W over $\mathrm{Z}_{19}$ ?
(ii) Is W commutative?
(iii) Is W finite?
(iv) Find $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{W}$ so that $\mathrm{T}^{-1}$ exists.
138. Let $\mathrm{V}=\left\{\left.\left[\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{16} \\ a_{17} & a_{18} & \ldots & a_{32} \\ a_{33} & a_{34} & \ldots & a_{48}\end{array}\right] \right\rvert\, a_{i} \in L_{7}(4), *, 1 \leq i \leq 48\right\}$ be a non associative matrix linear algebra over the field $\mathrm{Z}_{7}$.
(i) Find a basis of V over $\mathrm{Z}_{7}$.
(ii) Find the number of elements in $\mathrm{Z}_{7}$.
(iii) Does V contain sublinear algebras?
(iv) Find $L\left(V, Z_{7}\right)$.
139. Let $\mathrm{M}=\left\{\left.\left[\begin{array}{cccc}\mathrm{a}_{1} & a_{2} & \ldots & a_{10} \\ a_{17} & a_{18} & \ldots & a_{20} \\ \vdots & \vdots & & \vdots \\ a_{71} & a_{72} & \ldots & a_{80}\end{array}\right] \right\rvert\, a_{i} \in L_{5}(3), *, 1 \leq i \leq 8\right\}$ be a non associative matrix linear algebra over the field $Z_{5}$.
(i) Find a basis of M over $\mathrm{Z}_{5}$.
(ii) Find the number of elements in $M$.
(iii) Find $\operatorname{Hom}(\mathrm{M}, \mathrm{M})$.
140. Let $S=\left\{\left.\left[\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in L_{11}(7), \quad *, 1 \leq i \leq 9\right\}$ be a non associative matrix linear algebra over the field $\mathrm{Z}_{11}$.
(i) Find dimension of S over $\mathrm{Z}_{11}$.
(ii) Is S commutative?
(iii) Does S satisfy any of the special identities?
141. Let
$P=\left\{\left.\left[\begin{array}{cccc}d_{1} & d_{2} & d_{3} & d_{4} \\ d_{5} & d_{6} & d_{7} & d_{8} \\ \vdots & \vdots & & \vdots \\ d_{37} & d_{38} & d_{39} & d_{40}\end{array}\right] \right\rvert\, d_{j} \in L_{17}(3), *, 1 \leq j \leq 40\right\}$ be a non associative matrix linear algebra over the field $\mathrm{Z}_{17}$.
(i) Find a basis of P over $\mathrm{Z}_{17}$.
(ii) Is P commutative?
(iii) Does P satisfy any of the special identities?
(iv) Can P have more than one sublinear algebra?
142. Let $\mathrm{T}=\left\{\left.\left[\begin{array}{ll}\mathrm{a}_{1} & \mathrm{a}_{2} \\ \mathrm{a}_{3} & \mathrm{a}_{4}\end{array}\right] \right\rvert\, \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{59}(30), *, 1 \leq \mathrm{i} \leq 4\right\}$ be a non associative matrix linear algebra over the field $\mathrm{Z}_{59}$.
(i) Prove T is commutative.
(ii) Find dimension of T over $\mathrm{Z}_{59}$.
143. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{29}(15), *\right\}$ be a non associative polynomial linear algebra.
(i) Prove M is commutative.
(ii) Find a basis of M over $\mathrm{Z}_{29}$.
(iii) Can M have linear subalgebras?
144. Let $\mathrm{V}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{i} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{L}_{7}\right.$ (4), *\} be a non associative polynomial linear algebra over the field $\mathrm{Z}_{7}$.
(i) Find dimension of V over $\mathrm{Z}_{7}$.
(ii) Is V commutative?
(iii) Can V have substructures?
145. Give any interesting properties enjoyed by the non associative polynomial linear algebra.
146. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \mathrm{~d}_{2}, \mathrm{~d}_{3}\right), \mathrm{d}_{\mathrm{j}} \in \mathrm{L}_{11}(5), 1 \leq \mathrm{j} \leq 3\right.$, *\} be a non associative row matrix coefficient polynomial linear algebra over the field $\mathrm{Z}_{11}$.
(i) What is the dimension of M over $\mathrm{Z}_{11}$ ?
(ii) Is M commutative?
(iii) Find the algebraic structure of $\operatorname{Hom}_{z_{11}}(M, M)$.
147. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{d}_{1} \\ \mathrm{~d}_{2} \\ \vdots \\ \mathrm{~d}_{12}\end{array}\right]\right., \mathrm{d}_{\mathrm{j}} \in \mathrm{L}_{19}(8), 1 \leq \mathrm{j} \leq 3, *\right\}$
and $V=\left\{\sum_{i=0}^{\infty} a_{i} x^{i} \left\lvert\, a_{j}=\left[\begin{array}{cccc}d_{1} & d_{2} & d_{3} & d_{4} \\ d_{5} & d_{6} & d_{7} & d_{8} \\ d_{9} & d_{10} & d_{11} & d_{12}\end{array}\right]\right., d_{p} \in L_{19}(7)\right.$,
$1 \leq \mathrm{p} \leq 12, *\}$ be two non associative matrix coefficient linear algebras over the field $\mathrm{Z}_{9}$.
(i) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{Z}_{19}}(\mathrm{~T}, \mathrm{~V})$.
(ii) Find a linear transformation $\mathrm{f}: \mathrm{V} \rightarrow \mathrm{T}$ so that $\mathrm{f}^{1}$ does not exist.
(iii) Compare the algebraic structure $\operatorname{Hom}_{\mathrm{Z}_{19}}(\mathrm{~V}, \mathrm{~V})$ and $\operatorname{Hom}_{Z_{19}}(T, T)$.
148. If V is a non associative linear algebra over the field $\mathrm{Z}_{\mathrm{p}}$ ( p a prime, $p \geq 5$ ).
(i) Study the algebraic structure enjoyed by $\operatorname{Hom}_{Z_{\mathrm{p}}}(\mathrm{V}, \mathrm{V})$.
(ii) What is the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{V}, \mathrm{Z}_{\mathrm{p}}\right)$ ?
149. Obtain some interesting properties about non associative linear algebra of matrices over a field $\mathrm{Z}_{\mathrm{p}}, \mathrm{p} \geq 5$.
150. Obtain some interesting properties enjoyed by non associative linear algebra of matrix coefficient polynomials.
151. Let $\mathrm{S}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{i}^{\mathrm{i}} \left\lvert\, \mathrm{a}_{\mathrm{i}}=\left[\begin{array}{cccc}\mathrm{d}_{1} & d_{2} & \ldots & d_{10} \\ d_{11} & d_{12} & \ldots & d_{20} \\ \vdots & \vdots & & \vdots \\ d_{61} & d_{62} & \ldots & d_{70}\end{array}\right]\right., d_{j} \in L_{43}(17)\right.$,
$1 \leq \mathrm{j} \leq 70, *\}$ be a non associative linear algebra over the field $\mathrm{Z}_{43}$.
(i) Find $\operatorname{Hom}_{Z_{43}}(S, S)$.
(ii) Find $\operatorname{Hom}_{Z_{43}}\left(S, Z_{43}\right)$.
(iii) Find $\mathrm{T}: \mathrm{S} \rightarrow \mathrm{S}$ so that $\mathrm{T}^{-1}$ does not exist.
(iv) Find $T_{1}: S \rightarrow S$ so that $T_{1}^{-1}$ exists.
152. Let $P=\left\{L_{33}(17), *\right\}$ be a $S$-non associative linear algebra over the S -ring $\mathrm{Z}_{33}$.
(i) Find order of P .
(ii) Does $P$ satisfy any of the special identities?
(iii) Does P have substructures?
(iv) Find $\operatorname{Hom}_{Z_{33}}(\mathrm{P}, \mathrm{P})$.
153. Let $\mathrm{M}=\left\{(\mathrm{a}, \mathrm{b}) \mid \mathrm{a}, \mathrm{b} \in \mathrm{L}_{35}(12)\right.$, *\} be a S -non associative linear algebra over the S -ring $\mathrm{Z}_{35}$.
(i) Find the number of elements in M.
(ii) Can M be written as direct sum of linear subalgebras?
154. Let $P=\left\{\left(a_{1}, a_{2}, a_{3}, \ldots, a_{7}\right) \mid a_{i} \in Z_{15}(14), 1 \leq i \leq 7\right.$, * $\}$ be $a$ S-non associative linear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Find $\operatorname{Hom}_{Z_{15}}(P, P)$.
(ii) Can P be written as pseudo direct sum of S-non associative linear subalgebras over $\mathrm{Z}_{15}$ ?
155. Let $V=\left\{\left.\left[\begin{array}{c}d_{1} \\ d_{2} \\ \vdots \\ d_{10}\end{array}\right] \right\rvert\, d_{j} \in L_{77}(10), *, 1 \leq j \leq 10\right\}$ be a S-non associative linear algebra over the S -ring $\mathrm{Z}_{77}$.
(i) What is the dimension of V over $\mathrm{Z}_{77}$ ?
(ii) Find ( $\mathrm{V}, \mathrm{Z}_{77}$ ).
(iii) Find the number of elements in V .
156. Let $P=\left\{\begin{array}{c}\left.\left.\left[\begin{array}{c}d_{1} \\ d_{2} \\ \vdots \\ d_{10}\end{array}\right] \right\rvert\, d_{j} \in L_{77}(10), *, 1 \leq j \leq 10\right\} \text { be a S-non }, ~\end{array}\right.$ associative linear algebra over the S-ring $\mathrm{Z}_{77}$.
(i) What is the dimension of V over $\mathrm{Z}_{77}$ ?
(ii) Find ( $\mathrm{V}, \mathrm{Z}_{77}$ ).
(iii) Find the number of elements in V .
157. Let $\left.\left.P=\left\{\begin{array}{cc}d_{1} & d_{2} \\ d_{3} & d_{4} \\ \vdots & \vdots \\ d_{19} & d_{20}\end{array}\right] \right\rvert\, d_{j} \in L_{129}(5), \quad *, 1 \leq j \leq 20\right\}$ be a $S$ non associative linear algebra over the S -ring $\mathrm{Z}_{129}$.
(i) Prove P is finite dimensional.
(ii) Find $\operatorname{Hom}_{Z_{129}}(\mathrm{P}, \mathrm{P})$.
(iii) Will $\operatorname{Hom}_{\mathrm{Z}_{129}}(\mathrm{P}, \mathrm{P})$ be a non associative structure?
(iv) Find order of P .
158. Let $W=\square a_{i}=\left[\begin{array}{llll}d_{1} & d_{2} & \ldots & d_{5} \\ d_{6} & d_{7} & \ldots & d_{10} \\ d_{11} & d_{12} & \ldots & d_{15}\end{array}\right] d_{j} \in$
$\left.\mathrm{L}_{15}(8), \quad *, 1 \leq \mathrm{j} \leq 15\right\}$ be a S-non associative linear algebra over the S -ring $\mathrm{Z}_{15}$.
(i) Prove V is infinite dimensional.
(ii) Find $\operatorname{Hom}_{z_{15}}(\mathrm{~V}, \mathrm{~V})$.
159. Let
$V=\left\{\sum \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{d}_{1}, \ldots, \mathrm{~d}_{15}\right), \mathrm{d}_{\mathrm{j}} \in \mathrm{L}_{159}(47), *, 1 \leq \mathrm{j} \leq 15\right\}$
be a S-non associative linear algebra over the S -ring $\mathrm{Z}_{159}$.
(i) Find $\mathrm{L}\left(\mathrm{W}, \mathrm{Z}_{159}\right)$.
160. Let V be S -non associative polynomial linear algebra over the $S$-ring $Z_{n}$.
(i) Find $\operatorname{Hom}_{Z_{\mathrm{n}}}(\mathrm{V}, \mathrm{V})$.
(ii) Find $L\left(V, Z_{n}\right)$.
161. Let V be a non associative $5 \times 5$ matrix linear algebra over the S -ring $\mathrm{Z}_{55}$.
(i) Find $\operatorname{Hom}_{Z_{55}}(V, V)$.
(ii) Find L (V, $\left.\mathrm{Z}_{55}\right)$.
162. Find the marked difference between S-non associative linear algebras over a S-ring and a linear algebra over a field.
163. Find some applications of S-non associative linear algebras over a S-ring.
164. What are the benefits of using S-non associative linear algebras over a S-ring?
165. What are the special features enjoyed by groupoid vector spaces?
166. What are the differences between groupoid vector spaces and non associative linear algebras?
167. Give an example of a finite groupoid vector space.
168. Describe finite groupoid linear algebras and illustrate them by examples.
169. Let $\mathrm{V}=\{5 \mathrm{Z}, 3 \mathrm{Z}, 11 \mathrm{Z}\}$ be a set. $\mathrm{G}=\{\mathrm{Z}, *,(13,7)\}$ be a groupoid vector space over the groupoid $G$.
(i) Write V a direct sum of groupoid vector subspaces over G.
(ii) Write V as a pseudo direct sum of groupoid vector subspaces over G.
(iii) Find $\operatorname{Hom}_{G}(V, V)$.
170. Let $\mathrm{V}=\{10 \mathrm{Z}, 19 \mathrm{Z}, 3 \mathrm{Z}\}$ be a groupoid vector space over the groupoid G .
(i) Find $\mathrm{L}(\mathrm{V}, \mathrm{G})$.
171. Let $\mathrm{V}=\left\{\left(a_{1}, a_{2}, \ldots, a_{10}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{8}\end{array}\right], \left.\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in Z ; 1\right.$
$\leq \mathrm{i} \leq 10\}$ be a groupoid vector space over the groupoid G $=\left\{\mathrm{Z},{ }^{*},(3,13)\right\}$.
(i) Write V as a direct sum.
(ii) Find subgroupoid vector subspace (Does it exist?).
(iii) Find the algebraic structure enjoyed by $\mathrm{L}(\mathrm{V}, \mathrm{Z})$.
172. Let

$$
\begin{aligned}
& \mathrm{V}=\left\{\begin{array}{c}
\mathrm{a}_{1} \\
\mathrm{a}_{2} \\
\mathrm{a}_{3} \\
\mathrm{a}_{4}
\end{array}\right],\left[\begin{array}{ccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} \\
\mathrm{a}_{4} & \mathrm{a}_{5} & \mathrm{a}_{6} \\
\mathrm{a}_{7} & \mathrm{a}_{8} & \mathrm{a}_{9}
\end{array}\right],\left(\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & \mathrm{a}_{10} \\
\mathrm{a}_{11} & a_{12} & \ldots & \mathrm{a}_{20}
\end{array}\right), \\
& \left.\left.\left[\begin{array}{cccc}
\mathrm{a}_{1} & \mathrm{a}_{2} & \mathrm{a}_{3} & \mathrm{a}_{4} \\
\mathrm{a}_{5} & \mathrm{a}_{6} & \mathrm{a}_{7} & \mathrm{a}_{8} \\
\vdots & \vdots & \vdots & \vdots \\
\mathrm{a}_{37} & \mathrm{a}_{38} & \mathrm{a}_{39} & \mathrm{a}_{40}
\end{array}\right] \right\rvert\, \mathrm{a}_{i} \in \mathrm{Z}, 1 \leq \mathrm{i} \leq 40\right\} \text { be a groupoid }
\end{aligned}
$$

vector space over the groupoid $G=\{Z, *,(11,11)\}$.
(i) Find $\operatorname{Hom}_{G}(\mathrm{~V}, \mathrm{~V})$.
(ii) Write V as a pseudo direct sum.
(iii) Write V as a direct sum.
173. Let $V=\left\{\left.\left[\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30}\end{array}\right] \right\rvert\, a_{i} \in Z, 1 \leq i \leq 30\right\}$ be a groupoid linear algebra over the groupoid $G=\left\{Z,{ }^{*}\right.$, (3, 13) \}.
(i) Find $\operatorname{Hom}(\mathrm{V}, \mathrm{V})$.
(ii) Write V as a direct sum. (Is it possible?)
(iii) Can $V$ be written as a pseudo direct sum?
174. Give some nice results about groupoid vector spaces / linear algebras over the groupoid $\mathrm{G}=\{\mathrm{Z}, *,(\mathrm{t}, \mathrm{u})\}$.
175. Let $V=\left\{\begin{array}{lllll}a_{1} & a_{2} & a_{3} & \ldots & a_{20} \\ a_{21} & a_{22} & a_{23} & \ldots & a_{40}\end{array}\right],\left[\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right]$,

$$
\left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{15}
\end{array}\right], \left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
\vdots & \vdots & \vdots \\
a_{28} & a_{29} & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in Z_{28}, 1 \leq i \leq 40\right\} \text { be } a
$$

groupoid vector space over the groupoid $G=\left\{Z_{28}, *,(7\right.$, $0)\}$.
(i) Find number of elements in V .
(ii) Write V as a direct sum.
(iii) Find $\operatorname{Hom}_{Z_{28}}(V, V)$.
176. Let $\mathrm{M}=\left\{\begin{array}{llllll}a_{1} & a_{2} & a_{3} & a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16} & a_{17} & a_{18} \\ a_{19} & a_{20} & a_{21} & a_{22} & a_{23} & a_{24} \\ a_{25} & a_{26} & a_{27} & a_{28} & a_{29} & a_{30} \\ a_{31} & a_{32} & a_{33} & a_{34} & a_{35} & a_{36}\end{array}\right]$, where $a_{i} \in$
$\left.\mathrm{Z}_{43}, *,(7,0), 1 \leq \mathrm{i} \leq 36\right\}$ be a groupoid linear algebra over the groupoid $G=\left\{Z_{43}, *,(7,0)\right\}$
(i) Find $\operatorname{Hom}(\mathrm{M}, \mathrm{M})$.
(ii) Find L (M, G).
(iii) Is it possible to write M as a direct sum?
(iv) Does M satisfy any of the special identities as a groupoid?
(v) Does M contain any proper groupoid linear subalgebras?
177. Let

$$
\begin{aligned}
& V=\left\{\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{10} \\
a_{11} & a_{12} & \ldots & a_{20}
\end{array}\right],\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
\vdots & \vdots \\
a_{21} & a_{22}
\end{array}\right],\right. \\
& \left.\left[\begin{array}{ccc}
a_{1} & a_{2} & a_{3} \\
a_{4} & a_{5} & a_{6} \\
a_{7} & a_{8} & a_{9}
\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{13}\right) \mid a_{i} \in Z_{143}, 1 \leq i \leq 22\right\} \text { be } a
\end{aligned}
$$

groupoid vector space over the groupoid $G=\left\{Z_{143}, *\right.$, $(3$, 140) \}.
(i) Does V contain any substructures?
(ii) Will V satisfy any of the special identities?
(iii) Write V as a direct sum.
(iv) Write V as a pseudo direct sum.
178. Let
$\mathrm{V}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{12}\right),\left[\begin{array}{c}\mathrm{a}_{1} \\ \mathrm{a}_{2} \\ \vdots \\ \mathrm{a}_{40}\end{array}\right],\left[\begin{array}{cc}\mathrm{a}_{1} & a_{2} \\ \mathrm{a}_{3} & \mathrm{a}_{4}\end{array}\right], \left.\left(\begin{array}{cccc}\mathrm{a}_{1} & a_{2} & \ldots & a_{8} \\ a_{9} & a_{10} & \ldots & a_{16} \\ \mathrm{a}_{17} & a_{18} & \ldots & a_{24} \\ \mathrm{a}_{25} & a_{26} & \ldots & a_{32}\end{array}\right) \right\rvert\,\right.$
$\left.\mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{148}, 1 \leq \mathrm{i} \leq 40\right\}$ be a groupoid vector space over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{148},{ }^{*},(7,142)\right\}$.
(i) Write P as a direct sum.
(ii) Write P as a pseudo direct sum.
(iii) Find Hom (P, P).
(iv) Find the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{P}, \mathrm{Z}_{148}\right)$.
179. Let
$M=\left\{\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4} \\ a_{5} & a_{6}\end{array}\right],\left(\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{12} \\ a_{13} & a_{14} & \ldots & a_{24}\end{array}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{40}\end{array}\right]\right.$,
$\left.\left(a_{1}, a_{2}, \ldots, a_{15}\right), \left.\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, \quad a_{i} \in Z_{7}, 1 \leq i \leq 40\right\}$ be $a$
groupoid vector space over the groupoid $G=\left\{Z_{7},{ }^{*}\right.$, $(6,0)\}$.
(i) Prove M is a non associative and non commutative structure.
(ii) Is M a direct sum?
(iii) Can M have substructures?
(iv) Find $\operatorname{Hom}(\mathrm{M}, \mathrm{M})$.
(v) Find L (M, $\mathrm{Z}_{7}$ ).
180. Let
$M=\left\{\left(\begin{array}{lll}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6}\end{array}\right),\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ \vdots & \vdots & & \vdots \\ a_{91} & a_{92} & \ldots & a_{100}\end{array}\right]\right.$,

$$
\left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4}
\end{array}\right], \left.\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{46}
\end{array}\right]\left(a_{1}, a_{2}, \ldots, a_{25}\right) \right\rvert\, a_{i} \in Z_{3}, 1 \leq i \leq 100\right\} \text { be a }
$$

groupoid vector space over the groupoid $G=\left\{Z_{3},{ }^{*}\right.$, (2, 1) .
(i) Prove M is finite.
(ii) Write M as a direct sum.
(iii) Can M satisfy any of the special identities?
(iv) What is the algebraic structure enjoyed by Hom (M, M)?
181. Let $\mathrm{W}=\left\{\left(\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20}\end{array}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{12}\end{array}\right], \left.\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i}\right.$
$\left.\in Z_{25}, 1 \leq \mathrm{i} \leq 20\right\}$ be a groupoid vector space over the groupoid $G=\left\{Z_{25}, *,(20,6)\right\}$.
(i) Find the number of elements in W.
(ii) Write W as a pseudo direct sum.
(iii) Find the algebraic structure enjoyed by $\operatorname{Hom}_{\mathrm{G}}$ (W, W).
182. Let $\mathrm{V}=\left\{\begin{array}{llll}{\left.\left[\begin{array}{llll}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12} \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right] \right\rvert\, a_{i} \in Z_{43},(40,4), 1 \leq i \leq} \\ \end{array}\right.$
$16, *\}$ be a groupoid linear algebra over the groupoid $\mathrm{Z}_{43}$.
(i) Does V satisfy and special identity?
(ii) Prove V is non commutative.
(iii) Can V have substructures?
183. Let $\mathrm{M}=\left\{\left.\left\{\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ \vdots & \vdots & \vdots & \vdots \\ a_{37} & a_{38} & a_{39} & a_{40}\end{array}\right] \right\rvert\, a_{i} \in \mathrm{Z}_{45},(20,26), 1 \leq \mathrm{i} \leq\right.$ 40, *\} be a groupoid linear algebra over the groupoid $\mathrm{G}=$ $\left\{\mathrm{Z}_{45},{ }^{*},(20,26)\right\}$.
(i) Find $\operatorname{Hom}(\mathrm{M}, \mathrm{M})$.
(ii) What is the algebraic structure enjoyed by $\mathrm{L}\left(\mathrm{M}, \mathrm{Z}_{45}\right)$ ?
(iii) Does the groupoid linear algebra satisfy any of the special identities?
184. Let $\mathrm{P}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{47}, *,(3,46)\right\}$ be a groupoid linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{47},{ }^{*},(3,46)\right\}$.
(i) Find substructures of P .
(ii) Is P a commutative groupoid linear algebra?
(iii) Can P be written as a direct sum?
185. Let $\mathrm{M}=\left\{\sum_{\mathrm{i}=0}^{4} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}}, \sum_{\mathrm{i}=0}^{8} \mathrm{~d}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}}=\left(\mathrm{p}_{1}, \mathrm{p}_{2}, \mathrm{p}_{3}, \mathrm{p}_{4}\right)\right.$ and $\mathrm{d}_{\mathrm{j}}=$ $\left[\begin{array}{l}b_{1} \\ b_{2} \\ b_{3}\end{array}\right]$ where $p_{t}, b_{k} \in Z_{50}, 0 \leq i \leq 4,0 \leq j \leq 8,1 \leq t \leq 4,1 \leq$ $\mathrm{k} \leq 3\}$ be a groupoid vector space over the groupoid $\mathrm{G}=$ $\left\{\mathrm{Z}_{50}\right.$, *, (10, 0) \}.
(i) Write M as a direct sum.
(ii) Can M have more than three substructures?
(iii) Find Hom (M, M).
186. Let $\mathrm{W}=\left\{\sum_{\mathrm{i}=0}^{9} \mathrm{q}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}}, \sum_{\mathrm{i}=0}^{10} \mathrm{~b}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}}, \sum_{\mathrm{i}=0}^{11} \mathrm{~d}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}}, \sum_{\mathrm{i}=0}^{10} \mathrm{p}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \left\lvert\, \mathrm{q}_{\mathrm{i}}=\left[\begin{array}{c}\mathrm{y}_{1} \\ \mathrm{y}_{2} \\ \vdots \\ \mathrm{y}_{10}\end{array}\right]\right.\right.$, $\mathrm{b}_{\mathrm{t}}$ $=\left(\begin{array}{lllll}a_{1} & a_{2} & a_{3} & a_{4} & a_{5} \\ a_{6} & a_{7} & a_{8} & a_{9} & a_{10}\end{array}\right), d_{i}=\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right], p_{i}=\left(t_{1}, t_{2}\right.$, $\ldots, \mathrm{t}_{10}$ ) with $0 \leq \mathrm{j} \leq 9,0 \leq \mathrm{t} \leq 10,1 \leq \mathrm{r} \leq 11,0 \leq 1 \leq 10 ; 1$ $\left.\leq \mathrm{i} \leq 10,1 \leq \mathrm{k} \leq 10,1 \leq \mathrm{j} \leq 10, \mathrm{a}_{\mathrm{i}}, \mathrm{t}_{\mathrm{j}}, \mathrm{y}_{\mathrm{k}} \in \mathrm{Z}_{5}\right\}$ be a groupoid vector space over the groupoid $G=\left\{Z_{5}\right.$, *, (2, 3) \}.
(i) The number of elements in W is finite.
(ii) Write W as a direct sum.
(iii) Express W as a pseudo direct sum.
187. Let $\mathrm{T}=\left\{\sum_{\mathrm{i}=0}^{\infty} \mathrm{a}_{\mathrm{i}} \mathrm{x}^{\mathrm{i}} \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{Z}_{19}, *,(16,4)\right\}$ be a groupoid linear algebra over the groupoid $\mathrm{G}=\left\{\mathrm{Z}_{19}, *,(16,4)\right\}$.
(i) Show T is non commutative linear algebra.
(ii) Does T satisfy any of the standard identities?
(iii) Can T be written as a direct sum of groupoid linear subalgebra.
(iv) Find L (T, $\mathrm{Z}_{19}$ ).
188. Obtain the major difference between groupoid vector spaces and complex groupoid vector spaces.
189. Mention any special property enjoyed by complex groupoid vector spaces built using $\mathrm{C}\left(\mathrm{Z}_{\mathrm{n}}\right)$.
190. Let $\mathrm{V}=\left\{\mathrm{C}\left(\mathrm{Z}_{30}\right),{ }^{*},(3,10)\right\}$ be a complex groupoid linear algebra over the groupoid $G=\left\{Z_{30}, *,(3,10)\right\}$.
(i) Find the number of elements in V .
(ii) Give a basis of V over G .
(iii) Find Hom (V, V).
191. Let $\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right) \mid \mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{40}\right), \mathrm{i}_{\mathrm{F}}^{2}=39, *,(20,20)\right\}$ be a strong complex groupoid linear algebra over the complex groupoid $\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{40}\right),{ }^{*},(20,20), \mathrm{i}_{\mathrm{F}}^{2}=39\right\}$.
(i) Find a basis of W over $\mathrm{C}(\mathrm{G})$.
(ii) Can W have strong complex groupoid linear subalgebras?
(iii) Find Hom (W, W).
192. Let $\mathrm{M}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \mathrm{a}_{3}\right)\left[\begin{array}{l}a_{1} \\ a_{2} \\ a_{3} \\ a_{4}\end{array}\right], \left.\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{43}\right), 1 \leq i \leq\right.$ $\left.4, \mathrm{i}_{\mathrm{F}}^{2}=42\right\}$ be a complex groupoid vector space over the $\operatorname{groupoid}\left\{\mathrm{Z}_{43},{ }^{*},(10,3)\right\}$.
(i) Prove M is finite.
(ii) Write M as a direct sum.
(iii) Find Hom (M, M).
193. Let $\mathrm{P}=\left\{\left(\begin{array}{cccc}\mathrm{a}_{1} & \mathrm{a}_{2} & \ldots & \mathrm{a}_{10} \\ \mathrm{a}_{11} & \mathrm{a}_{12} & \ldots & \mathrm{a}_{20}\end{array}\right),\left[\begin{array}{c}\mathrm{a}_{1} \\ \mathrm{a}_{2} \\ \vdots \\ a_{12}\end{array}\right],\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{25}\right)\right.$ where
$\left.\mathrm{a}_{\mathrm{i}} \in \mathrm{C}\left(\mathrm{Z}_{23}\right) ; 1 \leq \mathrm{i} \leq 25, \mathrm{i}_{\mathrm{F}}^{2}=22\right\}$ be a strong complex groupoid vector space over the complex groupoid $\mathrm{C}(\mathrm{G})=$ $\left\{\mathrm{C}\left(\mathrm{Z}_{23}\right),{ }^{*},(3,14), \mathrm{i}_{\mathrm{F}}^{2}=22\right\}$.
(i) Show P has only finite number of elements.
(ii) Express P as a direct sum of strong complex groupoid vector subspaces.
(iii) Show P has pseudo complex strong groupoid vector subspace over $\mathrm{H}=\left\{\mathrm{Z}_{23}, *,(3,14)\right\}$.
194. Let $\mathrm{W}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{10}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{45}\end{array}\right], \left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{15} \\ a_{16} & a_{17} & \ldots & a_{30} \\ a_{31} & a_{32} & \ldots & a_{45}\end{array}\right] \right\rvert\, a_{i} \in\right.$
$\left.\mathrm{C}\left(\mathrm{Z}_{43}\right), \mathrm{i}_{\mathrm{F}}^{2}=12,1 \leq \mathrm{i} \leq 45\right\}$ be complex groupoid linear algebra over the groupoid $G=\left\{Z_{13}, *,(10,4)\right\}$.
(i) Find the algebraic structure enjoyed by (a) $L\left(W, Z_{13}\right)$. (b) $\operatorname{Hom}_{Z_{13}}(W, W)$.
(ii) Does W have a basis over the groupoid G ?
195. Let $\mathrm{P}=\left\{\left.\left\{\begin{array}{llll}a_{1} & a_{2} & \ldots & a_{12} \\ a_{13} & a_{14} & \ldots & a_{24} \\ a_{25} & a_{26} & \ldots & a_{36} \\ a_{37} & a_{38} & \ldots & a_{48}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{15}\right), i_{F}^{2}=14,1 \leq i\right.$ $\leq 48,(12,4), *\}$ be a strong complex groupoid linear algebra over the complex groupoid $\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{15}\right),{ }^{*},(12,4)\right\}$.
(i) Find the number of elements in P .
(ii) Find a basis of P over $\mathrm{C}(\mathrm{G})$.
(iii) Find a strong complex groupoid linear subalgebra of P over the complex groupoid $C(G)$.
196. Let $\mathrm{W}=\left\{\left.\left[\begin{array}{llll}\mathrm{a}_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8} \\ a_{9} & a_{10} & a_{11} & a_{12}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{40}\right), \quad i_{F}^{2}=39\right.$,
$1 \leq i \leq 12,(3,19), *\}$ and $P=\left\{\left.\left[\begin{array}{cc}a_{1} & a_{2} \\ a_{3} & a_{4} \\ \vdots & \vdots \\ a_{11} & a_{12}\end{array}\right] \right\rvert\, a_{i} \in C\left(Z_{40}\right)\right.$,
$\left.\mathrm{i}_{\mathrm{F}}^{2}=39,1 \leq \mathrm{i} \leq 12,(3,19), *\right\}$ be two strong complex groupoid linear algebras over the complex groupoid $\mathrm{C}(\mathrm{G})$ =
$\left\{\mathrm{C}\left(\mathrm{Z}_{40}\right)=\left\{\mathrm{a}+\mathrm{bi}_{\mathrm{F}} \mid \mathrm{i}_{\mathrm{F}}^{2}=39, \mathrm{a}, \mathrm{b} \in \mathrm{Z}_{40}\right\},{ }^{*},(3,19)\right\}$
(i) Find $\mathrm{T}: \mathrm{W} \rightarrow \mathrm{P}$ so that $\mathrm{T}^{-1}$ exists ( T a linear transformation of W to P ).
(ii) Find $\mathrm{f}: \mathrm{P} \rightarrow \mathrm{W}$ a linear transformation of P into W so that $\mathrm{f}^{-1}$ does not exist.
(iii) Find Hom (W, P) and Hom (P, W).
(iv) Does there exist any relation between $L(P, C(G))$ and L (W, C(G))?
197. Let
$P=\left\{\left(\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{10}\end{array}\right],\left(a_{1}, a_{2}, \ldots, a_{7}\right),\left[\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ a_{5} & a_{6} & a_{7} & a_{8}\end{array}\right]\right.$
where $\left.a_{i} \in C\left(Z_{14}\right) ; 1 \leq i \leq 10, i_{F}^{2}=13\right\}$ be a strong complex groupoid vector space over the complex groupoid $\mathrm{C}(\mathrm{G})=\left\{\mathrm{C}\left(\mathrm{Z}_{14}\right)=\left\{\mathrm{a}+\mathrm{bi}_{\mathrm{F}} \mid \mathrm{i}_{\mathrm{F}}^{2}=13, \mathrm{a}, \mathrm{b} \in\right.\right.$ $\left.\mathrm{Z}_{14}\right\}$, *, (3, 12) \}.
(i) Find a basis of P over $\mathrm{C}(\mathrm{G})$.
(ii) Find the number of elements in P .
(iii) Write P as a direct sum.
(iv) Find L (P, C(G)).
198. Mention some special features enjoyed by loop vector spaces defined over the loop $L_{n}(M)$.
199. Let $\mathrm{V}=\left\{(\mathrm{a}, \mathrm{b}) \mid \mathrm{a}, \mathrm{b} \in \mathrm{L}_{19}(8), *\right\}$ be a loop linear algebra over the loop $L_{19}(8)=L$.
(i) Find the number of elements in V .
(ii) Find a basis for V over L.
(iii) What is the dimension of V over L ?
(iv) Find $\operatorname{Hom}_{\mathrm{L}}(\mathrm{V}, \mathrm{V})$.
200. Let $S=\left\{\left[\begin{array}{ll}a_{1} & a_{2} \\ a_{3} & a_{4}\end{array}\right],\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{10}\end{array}\right], \left.\left[\begin{array}{ccc}a_{1} & a_{2} & a_{3} \\ a_{4} & a_{5} & a_{6} \\ a_{7} & a_{8} & a_{9}\end{array}\right] \right\rvert\, a_{i} \in L_{23}(7) ; 1 \leq i\right.$
$\leq 10\}$ be a loop vector space over the loop $L=L_{23}$ (7).
(i) Find a basis of S over L .
(ii) Write S as a direct sum of loop vector subspaces of $S$ over $L$.
(iii) Write S as a pseudo direct sum of loop vector subspaces of S over L .
(iv) Find L (S, L).
201. Derive some interesting features enjoyed by strong loop linear algebras.
202. Let $\mathrm{P}=\left\{\left(\mathrm{a}_{1}, \mathrm{a}_{2}, \ldots, \mathrm{a}_{10}\right),\left[\begin{array}{c}a_{1} \\ a_{2} \\ \vdots \\ a_{8}\end{array}\right],\left[\begin{array}{cccc}a_{1} & a_{2} & a_{3} & a_{4} \\ \vdots & \vdots & \vdots & \vdots \\ a_{13} & a_{14} & a_{15} & a_{16}\end{array}\right]\right.$,
$\left.\left[\begin{array}{cc}a_{1} & a_{2} \\ a_{3} & a_{4} \\ a_{5} & a_{6} \\ a_{7} & a_{8}\end{array}\right], \left.\left[\begin{array}{cccc}a_{1} & a_{2} & \ldots & a_{10} \\ a_{11} & a_{12} & \ldots & a_{20} \\ a_{21} & a_{22} & \ldots & a_{30}\end{array}\right] \right\rvert\, a_{i} \in L_{9}(5), 1 \leq i \leq 30\right\}$ be
a loop vector space over the loop $\mathrm{L}_{9}(5)=\mathrm{L}$ and

$$
\begin{aligned}
& M=\left\{\left[\begin{array}{c}
a_{1} \\
a_{2} \\
\vdots \\
a_{12}
\end{array}\right],\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{8} \\
a_{9} & a_{10} & \ldots & a_{16}
\end{array}\right],\right. \\
& \left.\left[\begin{array}{cc}
a_{1} & a_{2} \\
a_{3} & a_{4} \\
a_{5} & a_{6} \\
a_{7} & a_{8}
\end{array}\right], \left.\left[\begin{array}{cccc}
a_{1} & a_{2} & \ldots & a_{6} \\
a_{7} & a_{8} & \ldots & a_{12} \\
\vdots & \vdots & \ldots & \vdots \\
a_{25} & a_{26} & \ldots & a_{30}
\end{array}\right] \right\rvert\, a_{i} \in L_{9}(5), 1 \leq i \leq 30\right\} \text { be }
\end{aligned}
$$

a loop vector space over the loop $L=L_{9}(5)$.
(i) Define $\mathrm{T}: \mathrm{P} \rightarrow \mathrm{M}$ so that $\mathrm{T}^{-1}$ does not exist.
(ii) Study the algebraic structure enjoyed by $\operatorname{Hom}(\mathrm{M}, \mathrm{P})$.
(iii) What is the algebraic structure of $\mathrm{L}(\mathrm{M}, \mathrm{L})$ ?
203. Give an example of a loop linear algebra over a loop $\mathrm{L}=\mathrm{L}_{\mathrm{n}}(\mathrm{m})$.
204. Give an example of a strong non associative linear algebra which satisfies Moufang identity.
205. Does there exist a strong non associative linear algebra which satisfies Bol identity?
206. Give an example of a strong non associative linear algebra which satisfies the Burck identity.
207. Obtain some interesting properties enjoyed by S-strong non associative linear algebras over a S-ring.
208. Give an example of a commutative $S$-strong non associative linear algebra of finite order over a S-ring.
209. Give an example of a right alternative $S$-strong non associative linear algebra over a S-ring. Can that ever be commutative? (justify).
210. Does there exists an alternative S -strong non associative linear algebra over a S-ring?
211. Does there exist a Burck S-strong non associative linear algebra defined over a S-ring?
212. Does there exist a Moufang S -strong non associative linear algebra defined over a S-ring?
213. Does there exist a Bol S-strong non associative linear algebra defined over a S-ring?
214. Give an example of a S-strong non associative linear algebra which is right alternative over S-ring.
215. Let $\left.\mathrm{V}=\square a_{\mathrm{i}} \in \mathrm{L}_{63}(11), *, 1 \leq \mathrm{i} \leq 9\right\}$ be a S non associative linear algebra over the S -ring $\mathrm{Z}_{63}$.
(i) Find dimension of V.
(ii) Find a basis of V.
(iii) Can $V$ have more than one basis?
(iv) Find sublinear algebras W and a basis of that W .

## INDEX

## A

Alternative DS non associative semilinear algebra, 70-3

## C

Complex groupoid vector spaces, 137-9
Complex groupoid vector subspaces, 138-141
Complex loop vector space, 157-9

## D

Double Smarandache (DS) associative semilinear algebra, 67-9
DS idempotent non associative semilinear algebra, 71-4
DS strong non associative Bol semilinear algebra, 68-9
DS strong non associative Moufang semilinear algebra, 69-72
DS-P-non associative semilinear algebra, 72-5

## G

Groupoid vector space, 111-3
Groupoid, 7-10

## L

Loop vector space, 147-9

Matrix groupoid, 8-10

## N

New class of loops, 12
Non associative linear algebra, 83-5
Non associative semilinear algebras, 13-8
Non associative semilinear subalgebra, 16-9

## P

Polynomial groupoid, 8-12
P -semilinear algebra, 57-8
Q
Quasi simple, 28-32

## S

Smarandache non associative linear algebra, 103-6
Smarandache non associative semilinear algebra, 59-62
Smarandache special non associative linear algebra, 157-9
Strong complex subgroupoid vector subspace, 144-6
Strong groupoid complex linear algebra, 137-9
Strong loop linear algebra, 147-9
Strong non associative semilinear algebra, 20-5, 44, 76-8

## About the Authors

Dr.W.B.Vasantha Kandasamy is an Associate Professor in the Department of Mathematics, Indian Institute of Technology Madras, Chennai. In the past decade she has guided 13 Ph.D. scholars in the different fields of non-associative algebras, algebraic coding theory, transportation theory, fuzzy groups, and applications of fuzzy theory of the problems faced in chemical industries and cement industries. She has to her credit 646 research papers. She has guided over 68 M.Sc. and M.Tech. projects. She has worked in collaboration projects with the Indian Space Research Organization and with the Tamil Nadu State AIDS Control Society. She is presently working on a research project funded by the Board of Research in Nuclear Sciences, Government of India. This is her $65^{\text {th }}$ book.

On India's 60th Independence Day, Dr.Vasantha was conferred the Kalpana Chawla Award for Courage and Daring Enterprise by the State Government of Tamil Nadu in recognition of her sustained fight for social justice in the Indian Institute of Technology (IIT) Madras and for her contribution to mathematics. The award, instituted in the memory of Indian-American astronaut Kalpana Chawla who died aboard Space Shuttle Columbia, carried a cash prize of five lakh rupees (the highest prize-money for any Indian award) and a gold medal.
She can be contacted at vasanthakandasamy@gmail.com
Web Site: http://mat.iitm.ac.in/home/wbv/public html/ or http://www.vasantha.in

Dr. Florentin Smarandache is a Professor of Mathematics at the University of New Mexico in USA. He published over 75 books and 200 articles and notes in mathematics, physics, philosophy, psychology, rebus, literature. In mathematics his research is in number theory, non-Euclidean geometry, synthetic geometry, algebraic structures, statistics, neutrosophic logic and set (generalizations of fuzzy logic and set respectively), neutrosophic probability (generalization of classical and imprecise probability). Also, small contributions to nuclear and particle physics, information fusion, neutrosophy (a generalization of dialectics), law of sensations and stimuli, etc. He got the 2010 Telesio-Galilei Academy of Science Gold Medal, Adjunct Professor (equivalent to Doctor Honoris Causa) of Beijing Jiaotong University in 2011, and 2011 Romanian Academy Award for Technical Science (the highest in the country). Dr. W. B. Vasantha Kandasamy and Dr. Florentin Smarandache got the 2011 New Mexico Book Award for Algebraic Structures. He can be contacted at smarand@unm.edu

In this book, we introduce the notion of non-associative linear aggebres.
We mainly use the concept of loops
and groupoids to build these structures.
We have also introduced the notion of non-associtive semi-linear algebras:
In future, non-associative linear algebras
will find applications in mathematical models
that need not in general be associative.
