Abstract: The reification of space on the deepest levels has ruined humanities' ability to explain universal form and function.

All matter/particle theories rest on the hypothesis that space is a physical entity which gives definition to matter and particles. The assumption that space is a physical entity is an insidious root assumption which is unfalsifiable. Space is not a physical entity so any theory that requires its presence to give definition is unfalsifiable. Since matter/particle theory requires that space have physical presence, ipso facto matter/particle theory is unfalsifiable and unscientific.
